

Chapter 21 — The Unconscious and Personality Development

Student Notes Workbook · 学习笔记本工作册

Freud's psychoanalysis · The unconscious · The three structures · Defence mechanisms

Name 姓名: _____

Class 班级: _____

Start date: _____

How to use this workbook 使用方法

1. **Read one section** of the courseware, then fill in the matching workbook page. 边读课件边填空，不要一口气填完。
2. **Psychology is on a timeline.** Freud's dates (1856 / 1885 / 1900 / 1939) and the structural names (id / ego / superego) carry marks — write them properly. 数字与术语本身就是采分点。
3. **Apply the terms to scenarios.** Every theory page asks you to use a structural name on a real-life scenario — examiners want the *term welded onto the detail*. 要把术语贴在场景细节上，不是空答。
4. **Check answers** on the last page and tick the tracker below. 对答案并打卡。每页右上角标有对应课件章节。

Syllabus map — what the exam can ask 大纲考点 (spec 4.1.4, Part 2)

Syllabus	Content 内容	Workbook pages
4.1.4 (Part 2)	psy Freud · the unconscious · mid id / ego / superego · def defence mechanisms · Little Hans	pp. 2–12
Exam skills	Apply structure names to scenarios · outline + explain · 8-mark evaluation essay	p. 12
Self-test	Brain dump from memory · sentence patterns · answer key	pp. 13–15
Note 提示: spec 4.1.4 also covers Freud's psychosexual stages (oral / anal / phallic / latency / genital) — those live in the next textbook chapter and will have a separate workbook when those screenshots arrive.		

Review tracker 复习打卡

- ☐ Brain dump page done from memory 合上笔记完成自测页 Date: _____

The one-line map of the whole chapter 全章地图

Freud asks: **why do we do things we cannot explain?** His answer has three steps:

- ① **psy** 看不见 **unconscious** (mind has a hidden layer that drives behaviour) → ② **psy** 压不下去 **repression** (the unwanted wishes get pushed away but leak out) → ③ **mid** 三我 **structures** (the mind is split into **id** / **ego** / **superego** — three voices negotiating every choice).

Getting started — guess the unconscious motive 猜一猜无意识动机

For each situation below, write the hidden wish or fear Freud would say is driving it. The point is not to be right — the point is to think in *unconscious* terms. 每行写下你猜的「无意识里想要/害怕的」——不用追求答案对，重要的是学会这种思考方式。

Situation 情境	Your guess 你猜的无意识动机	Freud's name for it 术语
A man who is terrified of knives refuses to cook for his family.		
A student bites their pencil so hard it breaks during every exam.		
A driver who nearly crashes a motorcycle suddenly sells it.		
A child says "I hate you!" to a parent, then hugs them tightly.		

The one rule to follow when guessing 猜动机的一条规则

Freud always assumes **behaviour has a** _____ — even when the person can't name it. (cause 原因 / 缘由)

The trick is to ask: "**what would this behaviour** _____ **if the person knew they were doing it?**" (avoid / hide 躲避 / 隐藏) If even the person can't see the reason, the cause must live somewhere **below** awareness.

(Keep your guesses — by the end of §7 (id / ego / superego) you will label each one with a structural name that fits.)

Key term 填空

Psychoanalysis (精神分析) : a theory and therapy that treats mental disorders by _____ the unconscious conflicts that cause them. (bringing into awareness / talking through 把潜意识的冲突带进意识 / 说开)

Timeline — fill in the gaps 时间线填空

1856	Born in Freiberg (now Czech Republic), in present-day _____. (Austria 奥地利)
1880s	Trained as a _____ at the University of Vienna. (neurologist 神经科医生)
1885–86	Studied with Charcot in Paris — saw _____ produced by _____. (hysteria symptoms · hypnosis 歇斯底里症状 · 催眠)
1880s–90s	Worked with Breuer on Anna O — discovered that _____ removed her symptoms. (talking about the trauma 把创伤说出来)
1900	Published <i>The Interpretation of Dreams</i> — dreams are the _____ to the unconscious. (royal road 皇家大道)
1938–39	Fled Nazi Austria to _____; died there in _____. (London · 1939)

Three KEY TERMS from his biography 三个术语

Hysteria (歇斯底里)	Physical symptoms (paralysis, blindness, loss of speech) with _____ medical cause. (no obvious 没有)
Free association (自由联想)	Saying whatever comes to mind, however random, so _____ can leak out. (repressed thoughts 被压抑的想法)
Talk therapy (谈话疗法)	Patient _____ the memories the symptoms are built on. (narrates / puts into words 讲述)

Exam tip — Freud's dates are 1 mark each 考点金句

1856 (born) / 1900 (Dreams) / 1939 (died) / Anna O ~1880s — examiners reward specific dates over vague phrases like "Freud lived a long time ago."

Think-write · 一句话思考

Why did a *neurologist* end up founding *psychology*? Freud's training gave him one big idea: *if there's no physical cause for the symptom, the cause must be in the mind* — write this reasoning in your own words (3–4 lines).

The map of the mind 意识地图

Distance from awareness = how hard it is to reach. 三层不是三个独立房间，而是同一片海洋 — 越深越难打捞。 Fill in the three layers from "near" to "far":

The three layers — fill in the gaps 三层填空

Layer 层次	What it holds 装什么	Like a/an 像	How to access 进入方式
Conscious (意识)	What we are _____ of right now. (aware 在.....状态)	_____ (tip of iceberg 冰山尖)	Direct 立刻能用
Preconscious (前意识)	Memories and knowledge we are not thinking of but can _____. (easily bring to mind 轻松想起来)	_____ (shallow water 浅水区)	With _____ (effort 努力想一下)
Unconscious (潜意识)	Repressed wishes, traumas, instinctual drives we _____ access. (cannot 直接 cannot)	_____ (deep water 深海区)	Only via _____ (slips · dreams · therapy 失误 · 梦 · 治疗)

The exam trap 易错点

Students often write "*preconscious is unconscious but we don't notice it*". That's wrong — **preconscious is _____ access, just not right now.** (easy / effortless 容易的) A phone number you saved yesterday is preconscious; your childhood wish to harm a sibling is unconscious.

Two rows of practice — am I conscious, preconscious, or unconscious? 分类练习

Item 内容	Which layer	Why
The taste of the tea you are drinking <i>right now</i> .		
Your home phone number from when you were 10 (you'd need a moment to recall it).		
A childhood rage you have buried and cannot remember the details of.		
The capital of France — pops into your head without effort.		
The exact words your father said in a moment you cannot consciously retrieve but that shapes how you react to criticism.		

Think-write · 写作提示

Two ways Freud says unconscious material "leaks" into awareness are: _____ and _____. Write one sentence for each to show how it works in daily life.

Two energies drive the unconscious 两种本能

Freud believed the unconscious is fuelled by **two opposing drives**. They push behaviour in opposite directions — and most of life sits somewhere between them.

Compare the two drives 对比填空

Drive 本能	Greek name 希腊名	It drives us to ...	Daily example 生活例
Eros (生之本能)	_____ (love / life 爱 / 生命)	create, bond, _____, survive. (reproduce 繁衍)	_____ (caring for a child 养育孩子)
Thanatos (死之本能)	_____ (death 死亡)	destroy, _____, return to a state of calm. (aggress / hurt 攻击)	_____ (road rage · outburst 愤怒冲动)

Why Freud needed TWO drives 为什么是两种

One drive (*eros*) explained love, sex, creativity. But it could **not** explain why humans are also drawn to _____, war, and _____. (aggression 攻击 · self-destruction 自毁) So Freud posited a second, opposing instinct. This is the only chapter where **two drives** sit side by side — most behaviour is a *mix*.

Match the example to the drive 匹配例题

Example 例子	Eros or Thanatos?
A teenager spends two hours helping their younger sibling with homework.	
An office worker kicks the printer after it jams for the third time.	
A friend donates a kidney to a stranger they met online.	
A driver overtakes on a blind bend, muttering "I'll show them."	

Think-write · 写作提示

Freud's most controversial claim is that humans have an inborn death wish — that aggression is *nature*, not just nurture. Write 3–4 lines on why this made his theory hard to test in a lab.

Key term 填空

Repression (压抑) : the unconscious process by which the ego pushes _____ thoughts or memories _____ awareness so they cannot cause anxiety. (anxiety-causing / disturbing 引起焦虑 · out of 离开)

Repression is "藏而不消" — the wish does NOT disappear, it stays in the unconscious ready to leak out.

The repression-leak cycle — fill in the blanks 压抑与泄漏填空

Step 步骤	What happens 发生什么	Where the energy goes 能量去向
1. Wish (愿望)	An _____ wish arises (often aggressive or sexual). (unacceptable 不可接受)	—
2. Repress (压抑)	The ego pushes the wish into the _____. (unconscious)	—
3. Leak (泄漏)	The wish keeps its _____ — it does not vanish — so it surfaces as: • _____ (slips of the tongue 口误) • _____ (dreams (wish fulfilment) 梦) • _____ (symptoms (anxiety · phobia) 症状)	Same wish, _____ packaging. (disguised 伪装)

Three KEY TERMS from this chapter 三个术语

Repression (压抑)	Forcing a disturbing wish out of _____. (awareness 意识)
Wish fulfilment (愿望达成)	The disguised _____ of a dream that the unconscious wish cannot say straight. (fulfilment 完成)
Parapraxis (失误 · Freudian slip)	A "mistake" — slips of the tongue or pen — caused by an _____ wish slipping out. (unconscious 潜意识)

Try the slip — list three "mistakes" Freud would call parapraxes 失误例题

1. A man introducing his wife calls her by his ex's name. → The wish underneath:

2. A student about to present says "I'm nervous" but blurts out "I'm nude-ous". →

3. A woman emails her boss "I have attached the fee report" — but attaches the wrong file. →

Think-write · 写作提示

Why is "repression" such a useful concept for Freud? Because it lets the same unconscious wish turn into **different visible behaviours** — a slip, a dream, a symptom — without contradicting any single observation.

Write 2–3 lines on why that makes the theory hard to disprove. _____

The structure first, then the detail 先结构后细节

Three voices negotiate every choice — they live in different layers, follow different principles, and want different things. The principles differ on one axis: where reality fits in.

The three structures — fill in the gaps 三我结构填空

Structure 结构	Lives in 所在层次	Principle 原则	Wants 要的是
Id (本我)	The _____. (unconscious 潜意识)	_____ (pleasure principle 快乐原则)	Instant _____ — no waiting. (gratification 满足)
Ego (自我)	Mostly _____. (conscious / preconscious 意识 / 前意识)	_____ (reality principle 现实原则)	The wish, but at a _____. (realistic moment 合适的时机)
Superego (超我)	The _____. (unconscious 潜意识)	_____ (morality principle 道德原则)	To be _____, not just satisfied. (good / virtuous 好的)

The one-line summary that earns marks 一句话总结

Id = want, Ego = plan, Superego = judge.

本我管「想要」、自我管「怎么做」、超我管「该不该」。

when the three disagree: id pushing too hard, superego disapproving too strongly, ego caught in the middle.

Apply the structures to real-life behaviour — fill in who is talking 三我判定

Scene 场景	Structure	In one phrase
Wants to skip revision to play video games.		
Remembers last term's poor grade and stays at the desk.		
Feels guilty for wanting to play at all.		
Compromises "30 min gaming, then revision."		

Exam tip — apply questions 考点金句

The structure is half a mark — naming the principle earns the other half. Better answer: "the id dominates on the pleasure principle, demanding instant gratification without regard for consequences."

Why the ego needs defence 为什么自我需要防御

The ego is **caught between two pressures**: the id pushing for satisfaction, the superego disapproving.

When the conflict is too strong, the ego uses **defence mechanisms** (防御机制) — unconscious tricks to _____ the anxiety. (lower / push down 降低)

The two main defences — fill in the definitions 定义填空

Mechanism 机制	What it does 怎么办	Everyday example 生活例
Displacement (置换)	Redirecting an _____ impulse from the real target onto a _____ one. (aggressive/aggressive · safer 更安全的)	Yelled at by boss → shouts at _____ (spouse · child · pet 家人)
Denial (否认)	Refusing to _____ that a threatening reality exists. (accept 接受)	Diagnosed with illness → says "the test must be _____". (wrong 错的)

The key feature 共同特点

Both defences are **unconscious** — the person does not know they are doing it. If you shout at your dog and then *choose* to be nicer to your boss to compensate, that's not displacement. If you *decide* the bad news is fake, that's not denial. Both must be _____. (below awareness / automatic)

Identify the defence — fill in mechanism in each scenario 机制判定

Scenario 场景	Mechanism	Confidence
Lee is bullied at school; at home he snaps at the dog over nothing.		
Riley gets a poor job interview result and tells friends "they wouldn't recognise talent anyway."		
After a row with a parent, Sarah cleans the whole house furiously.		
When told her diagnosis is serious, Asha says "the doctor is just guessing."		
An employee is criticised by their manager and stays calm, then snaps at a junior colleague.		
A smoker diagnosed with lung damage insists the report "can't be right."		

Think-write · 写作提示

Defence mechanisms are useful short-term because they lower anxiety — but harmful long-term because the wish or fact stays unresolved. Pick ONE of the scenarios above and write 3–4 lines: *how might displacement (or denial) help in the moment but worsen the situation in a week?*

The case in one paragraph 案例一句话

Little Hans — a 5-year-old whose fear of horses appeared when he saw a horse fall over. Freud analysed the case _____ the boy himself — he worked with the boy's _____ by post. (without directly meeting · father 没见过本人 · 通过父亲) Conclusion: the fear was **displaced** from the fear of _____ onto a safer symbol (horses). (the father / castration 父亲 / 阉割)

Evaluation — fill in two strengths and two limitations 评价表

Point 要点	Fill in the detail 怎么解释	Why it matters
Strength 1 — Rich qualitative data (丰富的质性资料)	Detailed _____ of a real child's fears over months. (first-person account / diary 第一人称叙述)	Shows how an unconscious conflict can _____. (surface in real life 在现实生活浮现)
Strength 2 — Real-life phobia (真实恐惧)	Hans had a _____ animal phobia, not a lab response. (genuine / naturally-occurring 真实的)	Increases _____ — findings may apply outside the lab. (ecological validity 生态效度)
Limitation 1 — Single case (单一案例)	Conclusions based on _____ child — cannot generalise. (one 一个)	Hard to _____ from one case to "all children." (generalise 推广)
Limitation 2 — Father as researcher (父亲既是研究者又是父亲)	The data was filtered through the _____. (father 父亲)	The father may have _____ what he expected (or wanted) Freud to see. (biased / interpreted 选择性记录)

Exam tip — the formula for 8-mark evaluation 8 分题结构

For each point: **Strength OR Limitation → Evidence → Why it matters (link back to theory).**

Example: "A limitation is researcher bias — Freud's analysis was carried out by Hans's father, who had a vested interest in Freud's theory being correct. This suggests the case study may be contaminated."

Think-write · 写作提示

"One case study is not enough to evaluate a whole theory." Do you agree? Write a balanced 3–4 line answer: one strength and one limitation of relying on a single case for theory-testing.

Why Freud divides psychology 为什么弗洛伊德让心理学界分裂

Modern psychology loves **testable claims**. Freud's claims about *the unconscious*, *repressed wishes*, and *Oedipal conflicts* cannot be _____ directly. (observed / measured 直接观察) A theory that explains everything risks explaining nothing — this is the **falsifiability** debate.

Three boxes to fill in — hypothesis, alternative, test 三框练习

Freud's hypothesis (弗洛伊德的解释)	Alternative explanation (另一种解释)	How would I test it? (如何验证)

(Pick any ONE behaviour — e.g. someone biting their nails during exams. Apply the three-box test above.)

The two questions that always decide marks 决定分数的两个问题

- Can the claim be disproved?** If not, it's a story — not a scientific theory. (可证伪性)
- Is there a simpler explanation that fits the data?** Freud's theory is so elaborate it can explain the same observation in many ways — that is a weakness, not a strength. (奥卡姆剃刀)

Short answer · 简答练习

A critic writes: "*Freud's theory is unfalsifiable — you can always say the unconscious caused it.*" Write 4–5 lines defending OR attacking this view. Use **one** specific concept (repression / defence / Oedipus) and **one** real-life behaviour to make your argument.

Part A — Match the term to the definition (6 pairs) 概念连线

Definition 定义	Letter 选	Term 选项
The layer of mind we are aware of right now.		a) Repression b) Displacement c) Superego d) Denial e) Conscious f) Id
The structure on the pleasure principle, demanding instant satisfaction.		
The structure that internalises moral rules and judges us as good or bad.		
Pushing a disturbing wish out of awareness so it cannot cause anxiety.		
Redirecting an impulse from the real target onto a safer one.		
Refusing to accept that a threatening reality exists.		

Part B — Which structure is talking? 三我快速判定

Scenario 场景	Which structure?
Kaia feels hungry but dinner is in 20 min — she eats her friend's sandwich anyway.	
Willern is offered cake on the way home but walks past — he hates wasting money.	
Rhys wants to skip the gym but remembers his doctor's advice and goes anyway.	

Part C — Identify the defence mechanism 防御机制判定

Scenario 场景	Defence	Justify in one phrase
After a row with her mother, Janet reorganises the entire cupboard without stopping for an hour.		
On being told of his redundancy, Tom says "they'll ring back tomorrow — it's a mistake."		

Part D — Tick the skills you can do now 技能自检

- ☐ I can name the three levels of consciousness
 ☐ I can define id / ego / superego
 ☐ I can pick the right defence mechanism for a scene
- ☐ I can write an apply question naming the principle, not just the structure
 ☐ I can write a strength AND a limitation of the Little Hans case
- ☐ I can outline what makes Freud's theory hard to test scientifically

The Marta exam set — three short apply questions + an 8-mark plan 三道应用题 + 八分题

Every line below imitates a real WPS02-style question. Read carefully — the verbs (**explain / describe / outline**) carry marks.

Q1 — Noore (id, 2 marks) exam

Noore sees cake and eats it immediately despite her mother saying it is for guests. She says she "couldn't help herself."

Explain why Noore's behaviour reflects the id. (2)

Q3 — Lucy (ego, 2 marks) exam

Lucy closes the video app, sets a 90-minute timer, and tells herself she can watch once the timer goes.

Explain why Lucy's behaviour reflects the ego. (2)

Q2 — Suresh (superego, 2 marks) exam

Suresh refuses a lift home from his friend's father despite heavy rain. He says it "didn't feel right" accepting from an unknown adult.

Explain why Suresh's behaviour reflects the superego. (2)

Q4 — Outline difference (2 marks) exam

Outline the main difference between the id and the superego. (2)

Q5 — 8-mark essay plan (do not write the full essay — list the points) 八分题提纲 exam

Discuss the strengths and limitations of Freud's theory of the unconscious for understanding personality development. (8 marks)

Point	Point (PEEL: Point / Evidence / Explain / Link)	Mark aim	
P1		2 strengths + 2 limits + 4 PEEL blocks	
P2			
P3			
P4			

The honest self-test 自测说明

Close the workbook. Set a 10-minute timer. Without looking back, list everything you remember about Freud's unconscious and personality development — short phrases are fine. Empty lines you cannot fill in are exactly the topics to revisit.

Section 1 · Freud himself 弗洛伊德

1. _____
2. _____
3. _____

Section 2 · The unconscious and repression 潜意识与压抑

4. _____
5. _____
6. _____

Section 3 · The three structures 三我

7. _____
8. _____
9. _____

Sentence templates · 考试句式

- **Structure + principle:** "The behaviour reflects the _____ which operates on the _____ principle, demanding _____."
- **Defence mechanism:** "The behaviour is an example of _____, in which the impulse is _____ onto a safer target."
- **Evaluation:** "A strength is _____; for example, _____. This supports Freud because _____."
- **Evaluation (limit):** "A limitation is _____; in this study, _____. This weakens the theory because _____."

Self-mark 自评

- ☐ Filled **10+ lines** — strong ☐ Filled 6–9 lines — needs one more pass ☐ Filled under 6 — re-read §3–§7 first

p.2 — Mind reading guesses (sample, not the only answer)

Knife fear: repressed aggression / castration anxiety. **Pencil biting:** redirected exam anger. **Motorcycle sale:** denial of mortality. **"I hate you / hug":** ambivalence / id-push then superego-pull.

p.3 — Freud biography

1856 Austria · 1880s neurologist · 1885–86 Charcot, hysteria via hypnosis · 1880s–90s Breuer, Anna O, talking cures symptoms · 1900 Dreams, "royal road" · 1938–39 London, died 1939.

p.4 — Three layers

Conscious aware now · tip of iceberg · direct. **Preconscious** can bring to mind · shallow water · with effort. **Unconscious** cannot access directly · deep water · via slips/dreams/therapy.

Rows: tea = conscious; phone # = preconscious; buried rage = unconscious; Paris = conscious/preconscious; father's words = unconscious.

p.5 — Eros / Thanatos

Eros = love/life; create, bond, reproduce, survive; caring for child. Thanatos = death; destroy, aggress; road rage. Match the rest yourself — rows alternate Eros/Thanatos in the answer.

p.6 — Repression & leaks

Wish (unacceptable) → Repress (push into unconscious) → Leak (same wish, disguised packaging: slips, dreams, symptoms). Wish does NOT vanish.

p.7 — Three structures

Id: unconscious · pleasure principle · instant gratification. **Ego:** conscious/preconscious · reality principle · wish at realistic moment. **Superego:** unconscious · morality principle · good, not just satisfied.

p.8 — Defence mechanisms

Displacement: aggressive impulse from threatening target to safer target. **Denial:** refuses to accept threatening reality.

Scenarios: Lee=displacement; Riley=denial; Sarah (cleaning)=displacement; Asha=denial; employee→junior=displacement; smoker=denial.

p.11 — Checkpoint (Part A terms only)

Part A — term to definition: 1-e (unconscious), 2-f (defence mechanism), 3-c (repression), 4-a (superego), 5-b (id), 6-d (ego).

p.11 — Checkpoint (Parts B & C)

Part B — structure on scenario:

Kaia = id (instant "treat myself" with no reality check).

Willern = superego (saving money = moral rule, judges impulse as bad).

Rhys = ego (weighs reality + doctor's advice before deciding).

Part C — defence on scenario:

Janet = displacement (anger at husband redirected to cleaning the cupboard).

Tom = denial ("they'll definitely ring back" — refuses the threatening reality).

p.12 — Exam practice (Part A: structure on scenario)

Q1 — Noore (id): Noore acts on the pleasure principle — she takes the cake immediately to satisfy her hunger with no regard for the rule. "Couldn't help herself" shows the id's inability to delay gratification.

Q2 — Suresh (superego): His superego enforces a moral rule against rides from unknown adults — "didn't feel right" is the inner moral voice judging the impulse, regardless of practical comfort (rain).

Q3 — Lucy (ego): The ego operates on the reality principle — she recognises the id's wish (videos) but delays it 90 min. The timer is the ego's compromise: neither killing the wish nor surrendering to it.

Q4 — Outline (id vs superego): Id = instant gratification of instinct with no regard for consequence. Superego = enforces moral standards and judges the self as good or bad regardless of wish. Contrast: pleasure vs morality.

p.12 — Exam practice (Part B: 8-mark essay)

Q5 — PEEL plan (4 blocks, 8 marks):

P1 strength — first systematic account: Freud gives one of the first systematic accounts of how unconscious conflicts shape behaviour. Little Hans showed a single phobia reflecting an Oedipal conflict, providing rich qualitative detail not available in lab studies.

P2 strength — therapeutic legacy: Talking therapy / psychoanalysis remains a foundation for many modern therapies — CBT, psychodynamic therapy, and the "therapeutic alliance" concept all trace back to Freud's talking-cure method.

P3 limitation — unfalsifiability: Every behaviour can be retro-fitted to an unconscious wish; hard to design a study that could disprove the theory. This is a scientific status problem, not just a measurement problem.

P4 limitation — Little Hans evidence: The case relied on the father's reports, creating researcher bias and limiting generalisability from a single case. Findings cannot be replicated, and Hans's age (5) means the "Oedipal interpretation" may be projection rather than evidence.
