4.1.6 Psychoanalysis and the Object Relations School — Student Notes Workbook

What this workbook covers 本册讲什么

Freud's therapy does not fight the symptom — it follows the clues: free speech, dreams, feelings aimed at the therapist, even missed appointments. This booklet covers the aim, the setting, the four techniques, the object relations school, and the evaluation (including Eysenck's famous objection).

How to use this booklet 怎么用

1. **Fill it in as you go** — check the answer key (p.20) after each page.
2. **Pages 6–11 (the techniques) matter most.** Redo them from memory, under time.

Content map 内容地图

Page	Topic	What you must be able to do afterwards
p.2	The puzzle 引入	Explain why visible patterns resist change
p.3–4	Theory → therapy + definition 三概念与定义	Link unconscious, conflict, defences to the therapy; state the aim
p.5	Setting + assessment 设置与评估	Explain the couch and anonymity; list the four assessment areas
p.6	Free association 自由联想	Define it and explain how it weakens defences
p.7–8	Dream analysis 释梦	Define manifest, latent, dreamwork, displacement; interpret a symbol
p.9–11	Transference · counter-transference · resistance 移情三讲	Define each, with directions, and say why each is informative
p.12	One session 会谈流程	Reproduce the stage table
p.13–14	Object relations 客体关系	Object · psyche · internal working model; the therapy and its goal
p.15–17	Evaluation 评价	Psychoanalysis and ORT strengths / limits incl. Eysenck
p.18–19	Three therapies + practice 对照与演练	Comparison table; plan the Saisha 8-marker and ORT 4-marker
p.20	Answer key 答案速查	Mark honestly, then re-write wrong answers in full

Revision tracker 复习打卡

☐ p.3 three concepts ☐ p.6 free association ☐ p.7–8 dreams ☐ p.9–11 transference/counter/resistance ☐ p.13 object relations ☐ p.15–17 evaluation ☐ p.18–19 exam

The whole therapy in one sentence 一句话总结

Psychoanalysis is a **non-directive** therapy aiming at **self-insight by making the unconscious conscious**: free association, dream analysis, transference and resistance each leak unconscious material past the defences, the therapist interprets it, and the client relives the conflict safely as an adult — while object relations therapy redirects the same toolkit at the **internal working model** built by our earliest attachments.

1 · The puzzle: visible patterns, invisible reasons

Two clients 引入

One dates cold, critical partners — again and again. One loses every friendship in the same argument. Both can describe exactly what goes wrong. **Neither can stop it.**

Fill the gap 填空

Freud's answer: the real reason is not _____ to them. It lives in the _____ — and what we consciously believe about ourselves is the story the mind tells afterwards.

Quick check 快问快答

What would a therapy built on Freud's theory try to do — (a) give better advice, (b) bring hidden reasons into awareness, or (c) train avoidance of stress?

One more classification 分类回顾

Psychoanalysis is _____-directive: the client talks, the therapist listens and interprets. The mirror image is systematic desensitisation (4.1.5), which is _____-directive.

中文理解 为什么「看见了却改不掉」
你看到的模式只是**表面**，真正的动力藏在潜意识里——有你自己都不承认的愿望、冲突和记忆。治疗不能靠「给建议」，而要**把潜意识翻到意识层面**。看见真正的理由，改变才有可能。

2 · From theory to therapy: three concepts

Three concepts, three actions 三概念三动作

Concept（理论概念）	What it says	What the therapy does with it
The unconscious mind（潜意识）	A large part of the mind is _____ from awareness, yet still drives behaviour.	The therapy is a journey _____ into it — every technique is a way of hearing it.
Intrapsychic conflict（内心冲突）	The _____ demands, the _____ forbids, the _____ is squeezed between.	The client relives old conflicts _____, as an adult, and resolves them.
Ego defence mechanisms（自我防御机制）	The ego pushes painful material out of awareness.	The techniques _____ the defences, letting content slip through.

Draw the iceberg 画冰山

Draw an iceberg. Label the part above the waterline CONSCIOUS and the part below UNCONSCIOUS. Add an arrow showing where psychoanalysis works.

The sentence to remember 背这句

The aim of psychoanalysis is to give the client **self-insight by making the unconscious conscious** — so the client can relive past experiences in a safe environment and resolve psychic conflicts and defences.

3 · What psychoanalysis is

Key term — learn this word for word

Psychoanalysis（精神分析）: a _____ psychological therapy developed by _____. Its aim is to give the client _____ by making the _____ conscious.

Side by side with SD 与系统脱敏对照

Question	Systematic desensitisation (4.1.5)	Psychoanalysis (4.1.6)
Who leads?	The therapist — directive.	_____
What is treated?	The learned response.	The underlying _____ conflict.
Main tool	Hierarchy + relaxation.	_____: free association, dreams, the relationship itself.
Time scale	Brief and structured.	About _____ a week, possibly for _____.

中文理解 一张表分清两个疗法

SD＝**教练**：我安排步骤，你照做，治「反应」。
精神分析＝**侦探**：你随便说，我从话、梦、迟到里找线索，治「原因」。
考 compare 题时，这张表的每一行都是一个对比点。

4 · The setting and the first session

The classic arrangement 经典设置

- The client lies on a _____ facing _____ from the therapist.
- The therapist remains _____ — no judgements, no shown emotion.

Why? 每个细节都有工作

Design	Its job
Facing away	The client cannot read the therapist's face, so cannot _____ what they say to please or annoy them.
Anonymity	Not reacting means not _____; the client is safe to say the embarrassing things.
Together they build…	The therapeutic _____ and trust — essential in psychoanalysis.

Session one: the assessment 初次评估四件事

① current _____ ② personal _____ ③ _____ ④ _____ they may be experiencing.

中文理解 躺椅不是怪癖，是技术设计

对着朋友说难以启齿的事，你一定会盯着他的脸，然后当场删改。**看不到脸，才敢说真话。**治疗师保持匿名同理：我不评判你，所以你不用讨好我或防着我。

5 · Free association

Key term

Free association（自由联想）: the client speaks freely about their thoughts, memories, feelings and dreams, and is asked **not to** _____ **at all**, no matter how _____ or irrelevant the information seems.

Why rambling helps 为什么「乱说」有用

Every time you swallow a thought ("that's silly", "I shouldn't say that"), a _____ has done its job. Free association aims to access the unconscious by _____ the ego defence mechanisms that normally _____ it.

The two-minute experiment 两分钟实验

Say honestly whatever comes to mind for one minute, forbidding yourself to censor. Write down the internal editor's phrases that appeared ("don't say that", "that's irrelevant"). Each one is a defence mechanism caught working.

中文理解 自由联想 = 让「内心审稿人」下班

平时说话前都有自我审查——那些「审稿人」就是防御机制。自由联想只有一条规则：**想到什么说什么，不许删改。**环境越放松、越不评判，审稿人越松懈，潜意识漏得越多。

6 · Dream analysis (part one): the vocabulary

Three key terms

Manifest content（显性内容） — the dream _____ we experience and report it.

Latent content（隐性内容） — the actual _____ or desire underneath.

Dreamwork（梦的工作） — the process of _____ and disguising the latent content into the manifest dream.

Freud's premise 前提

When we dream we are _____ our wishes and desires — but the wish arrives in the dream _____.

Draw the assembly line 画流水线

Three boxes with arrows: LATENT CONTENT → DREAMWORK → MANIFEST CONTENT. Underneath, a backwards arrow labelled "the therapist interprets the symbols".

6 · Dream analysis (part two): displacement

The disguise itself 伪装术

Key term

Displacement（置换）: we dream of something which is actually _____ of something else — the feelings move to a substitute.

Why the disguise works at night 为什么夜里防不住

During sleep our ego defence mechanisms are _____, allowing unconscious content to slip into the dream. The defences still demand a _____ — but cannot block the dream entirely. That gap is where the therapist works.

The therapist's role 治疗师的角色

The role of the therapist is to _____ these symbols to uncover the actual _____ wish.

Practise interpretation 练一次解释

A client dreams of being chased by a large black dog. Offer one psychoanalytic interpretation (what might the dog displace?), then say why a different therapist might read it differently.

中文理解 梦 = 加了伪装的愿望

latent＝真正想说的（藏起来）；**manifest**＝你早上讲出来的故事；**dreamwork**＝中间那道伪装工序，常用 displacement 把情绪挪到替身身上。睡着时防御值班松了，内容才漏出来；治疗师的工作＝**顺着伪装往回破译**。

7 · Transference

Key term

Transference（移情）: during therapy, the client may _____ their feelings and thoughts about a person or situation onto the _____ — as if the therapist were a _____.

Four kinds of transferred feeling 四种移情

Kind	Example in the room
Positive feelings	
Hostile feelings	
Romantic feelings	
Dependence	

Why it is useful 为什么有用

The feelings are not really about the therapist — the therapist is a _____. The client's deepest patterns are being _____ live, where a trained observer is watching. It is the therapist's role to _____ the transference to gain insight into the client's unconscious mind.

中文理解 把治疗师「当成」某个重要的人

你对待权威老师又敬又怕的模式，不会因为进了治疗室就消失——你会不知不觉用对待父亲/母亲的方式对待治疗师。这不是事故，是**素材**：最重要的人际模式正在现场直播，治疗师正好现场解说。

8 · Counter-transference

Key term — direction matters 方向别记反

Counter-transference（反移情）: the _____'s emotional _____ to the client's transference.

Four responses the therapist may notice 四种反应

- _____ of warmth towards the client
- _____ or irritation
- feeling _____ towards the client
- _____ feelings for them

Data, not obstacle 是数据不是障碍

Both transference and counter-transference are important _____ of the therapeutic relationship. The therapist should work to _____ them and explain their _____ to the client.

Direction drill 方向小测

Label each: (a) the client starts feeling romantic about the therapist; (b) the therapist starts dreading the client's sessions; (c) the client misses sessions when childhood is mentioned.

中文理解 治疗师也是人

来访者撒娇依赖，你可能想照顾他；来访者周周攻击你，你可能开始烦他。情绪本身不是错误——**关键是别被牵着走，而是拿它当数据**。transference＝来访者的情绪投向治疗师；counter-transference＝治疗师的情绪反应。

9 · Resistance

Key term

Resistance（阻抗）: the client's reluctance to explore _____ thoughts and emotions, shown indirectly — missing or arriving _____ to sessions, or _____ the topic of conversation.

Resistance is information 阻抗是信息

Why does the therapist treat lateness and topic-changing as material rather than rudeness? (Hint: where does the client resist?)

The sentence to remember 背这句

The client does not resist randomly — they resist precisely **where it hurts**, so the shape of the resistance traces the outline of the unconscious conflict underneath. Understanding resistance becomes **part of the therapy**.

中文理解 迟到和跑题不是态度问题，是地图

平时守时的来访者，唯独聊到父亲那周迟到；平时健谈，唯独提童年就换话题。**避开哪里，哪里就有东西。**治疗师不指责阻抗，而是研究它。

The stage table 会谈流程表

Stage	What happens	Which concept it uses
Opening	Client lies on the couch and _____; dreams from the week are reported.	Free association · dream analysis
Middle	Feelings towards the therapist _____; missed sessions and topic changes appear.	Transference · resistance
Interpretation	The therapist offers _____ — of symbols, of the transference, of the resistances.	Weakening the defences
Insight	The client sees the conflict, _____ it as an adult, and resolves it.	The aim: making the unconscious conscious

From the textbook 课本原句改写

By working through these processes, the therapist builds up a _____ of unconscious _____ and _____ them to the patient.

中文理解 治疗像拼图，不像做手术

自由联想给碎片，梦给碎片，移情和阻抗给碎片——治疗师把碎片拼成**潜意识冲突的地图**，再解释给来访者听。解释（interpretation）贯穿始终：解释梦、解释移情、解释阻抗，全是同一个动作。

Three key terms

Object — the internal _____ of another person carried in the mind（客体＝心里那个人的内部表征）.

Human psyche（人类心智） — the mind with all its _____ and unconscious aspects: thoughts, feelings, memories and wishes.

Internal working model（内部工作模型） — a mental construct formed from our _____ experiences, influencing our perception of relationships as stable/unstable, trusting/untrusting, secure/insecure.

The chain 链条

Fill and memorise: Early attachments with parents (objects) → internal _____ of those relationships → _____ working model → steers every later relationship and personality development.

Say it in your own words 自己说一遍

A client says every relationship ends the same way. Explain their pattern using object relations language.

中文理解 object 不是「物体」

「客体」＝你头脑中对重要他人的**内部表征**。链条：早期依恋 → 内部模型 → 成年关系模板。
类比：小时候学会的口音自己察觉不到，却决定你一生的口音——**早期关系就是关系的「母语」**。

What happens 治疗里做什么

- A _____-directive therapy aiming to understand the client's relationships and internal representations of objects.
- Emphasis on experiences in _____ childhood and the quality of _____ that were formed.
- The client talks about early relationships and the feelings and thoughts they have about them.
- Like psychoanalysis: analysis of _____ and counter-transference, of _____, and exploration of the unconscious.
- But the focus stays on relationships with others and how they have been _____ by the client.

The goal 目标

To help clients _____ between their self-identity and others, and to establish _____ between them.

中文理解 治疗目标为什么是「分清你和别人」

早期关系一团糟时，来访者心里「你」「我」边界常是模糊的：要么过度依赖，要么过度隔离。治疗＝陪他把心里「别人的声音」一个个认出来：**这个害怕是我自己的，还是我妈妈塞给我的？**认出来，边界就立起来了。

13 · Evaluation: psychoanalysis — strengths & the subjective trap

Two strengths 两条优点

Strength	The reason
Holistic 整体论	It takes into account _____ factors about a person that may have led to mental health problems — unlike SD, which focuses on learned _____.
Productive 有生成力	It has led to the development of other therapies, such as the _____ school of thought.

The subjective trap 主观性

Much of the therapy's principles derive from psychodynamic theory, which Freud built from _____ of his own patients. Interpretations of symbols in free association, dream analysis and transference are _____. A different therapist may have a completely different interpretation — meaning psychoanalysis is an _____ therapy.

The dream-symbol drill 梦符号练习

Write two different interpretations of "flying in a dream", then one sentence explaining what this shows about the therapy's reliability.

中文理解 主观性为什么致命

同一个梦，治疗师 A 说「飞＝渴望逃离父亲」，治疗师 B 说「飞＝性欲的升华」。诊断取决于谁在听——这就叫 **unreliable**。AO3 里写 unreliability 时必须带上「不同的治疗师会有不同解释」这个理由。

Slow and expensive 又慢又贵

Sessions last around _____ once a week, and therapy can go on for many _____. It is a talking therapy requiring a degree of _____ and understanding — which makes it _____ for many people.

Eysenck (1962) — the famous objection

Finding	Detail
Effectiveness	Psychoanalysis appeared effective in around _____ of the patients treated (for _____).
The problem	More patients seemed to recover after _____ at all.
Deeper issues	No consistent measure of _____; individual differences between patients, therapists, and type and _____ of therapy make conclusions unreliable.

Key term

Spontaneous remission（自发缓解）: recovery _____ treatment — the benchmark any therapy must beat.

中文理解 Eysenck 这刀为什么狠

治好一半听起来不错？但 Eysenck 说：**不治疗的自己好了更多**——那药的价值在哪？再加上「治愈」无统一标准、个体差异巨大，效果研究几乎没法做干净。这是 AO3 最锋利的 limitation。

The same subjectivity — with a "but" 同样的主观性，但有转折

The same criticism can be made: analysing symbols in the client's internal world is _____. **However**, therapists are trained to _____ and minimise subjective interpretation, working with the client in a _____ way to facilitate a _____ understanding of the client's experiences.

The strength: developmental evidence 发展心理学证据

Object relations therapy is based on _____ work in developmental psychology demonstrating the importance of early childhood relationships for later development. Its central claim — early attachments matter — is one of the best-supported ideas in the discipline (you will meet it again in Topic E: _____ and _____).

The limits 局限

- Built on _____ study evidence, like psychoanalysis.
- Difficult to _____ its effectiveness.

> **The "but" sentence to memorise 必背转折句**
> “While subjectivity is present, therapists are trained to acknowledge and minimise subjective interpretation, working collaboratively with the client to facilitate a shared understanding.” — 一句话同时展示弱点与防御，比单写一边高级。

Fill the table from memory 凭记忆填表

Question	Systematic desensitisation	Psychoanalysis	Object relations therapy
Directive?			
Main target			
Key technique			
Goal			
Best for			
Main weakness			

中文理解 三个疗法各记一条

SD＝**换反应**（怕→放松）；精神分析＝**找原因**（潜意识变意识）；客体关系＝**理关系**（分清自己和别人）。

指导性只有 SD 一个——记住这个「孤例」，选择题就不会错。

16 · Practice: two exam questions

Q1. Saisha is a psychoanalyst. She has a new client, Omal, who has come to her for psychoanalysis because he has a phobia of flying. Discuss how Saisha might use psychoanalysis to help Omal with his phobia of flying. (8 marks)

Plan the 8-marker 提纲

AO1 — applied to Omal	Your notes
Aim + assessment	
Free association	
Dream analysis	
Transference + resistance	
AO3	
Strength (holistic / productive)	
Limitations (subjectivity / time / Eysenck)	

Q2. Explain one strength and one weakness of the object relations school of thought therapy. (4 marks)

Exam tip（课本原话改编）

"How" is a **process** — like following a recipe. Use *firstly, secondly, thirdly* so you write enough points. In the 8-marker, keep naming Omal: a generic answer scores 0.

Key answers 答案速查

p.2 visible; unconscious; (b); non / directive. **p.3** hidden; down; id / super-ego / ego; safely; weaken. **p.4** non-directive; Sigmund Freud; self-insight; unconscious; the client — non-directive; unconscious; talking; an hour; years. **p.5** couch; away; anonymous; edit; judging; relationship; concerns / history / relationships / symptoms. **p.6** censor; embarrassing; defence; weakening; censor. **p.7** as; wish; altering; fulfilling; disguised. **p.8** symbolic; weaker; disguise; interpret; unconscious. **p.9** transfer; therapist; parent; stand-in; re-enacted; interpret. **p.10** therapist; response; positive feelings / frustration or irritation / protective / romantic; features; interpret; significance; (a) transference (b) counter-transference (c) resistance. **p.11** distressing; late; changing; they resist where it hurts. **p.12** free-associates; surface; interpretations; relives; picture; conflicts; explains. **p.13** representations; conscious; attachment. **p.14** non; early; attachments; transference; symbols; internalised; differentiate; boundaries. **p.15** many; behaviour; object relations; case studies; subjective; unreliable. **p.16** an hour; years; self-insight; inaccessible; half; neurosis; no treatment; cure; duration; without. **p.17** subjective; acknowledge; collaborative; shared; extensive; Bowlby / Ainsworth; case; measure.

Q1 model outline 8 分提纲示范

AO1: non-directive; aim = make the unconscious conscious; assessment of concerns/history/relationships/symptoms; free association (no censoring); dream analysis (manifest → displacement → latent); interpretation of transference (as if a parent) and resistance; relive safely as an adult. AO3: holistic — reaches causes a symptom-focused therapy would miss; generated object relations; but interpretations subjective → unreliable; an hour a week for years, needs self-insight → inaccessible; Eysenck (1962): ~half improved, more recovered untreated, no consistent measure of cure; a specific phobia would be treated faster by SD — a comparison worth making.

Q2 model outline 4 分提纲示范

Strength: rests on extensive developmental psychology showing early relationships matter (and therapists are trained to minimise subjective interpretation, working collaboratively). Weakness: built on case studies; effectiveness hard to measure; interpretations of the internal world remain subjective — a different therapist could conclude differently.

Final check · brain dump 五分钟默检

No notes. Write: (1) the aim of psychoanalysis; (2) manifest vs latent content; (3) transference vs counter-transference (directions!); (4) why resistance is information; (5) the object-relations chain; (6) Eysenck's finding in one sentence.

Last thing 下一步

Topic D content is complete. Next up in this unit: **4.2 Methods** — observations, content analysis and case studies.
