What this workbook covers 本册讲什么

Your option study for Topic A: children, chimpanzees and orangutans learn one way to earn a reward, watch three peers use a different, equally effective way, then choose three times. Children **switch** (12 of 18); the apes **stay**. This booklet drills the aim, the sample, the three-phase procedure, the switch-minus-stay score, Table 6.3, the conclusion, and the evaluation.

How to use this booklet 怎么用

1. **Fill it in as you go** — check the answer key (pp. 19–20) after each page.
2. **Page 8 (describe the procedure, 3 marks) matters most.** It is a real exam question from the textbook, answered in three stages.

Content map 内容地图

Page	Topic	What you must be able to do afterwards
p.2–3	Species & aim 物种与目的	Why primates; define conspecific; recite the aim
p.4–5	Sample & box 样本与装置	Three groups with numbers; how the box works
p.6–9	Three phases 三阶段	Learn 8/10; watch six demonstrations; choose freely
p.10–11	Results & conclusion 结果	Table 6.3; switch minus stay; the conclusion
p.12–14	Evaluation 评价	Four weaknesses, three strengths, the application
p.15–18	Exam skills 考试	Procedure 3-marker; aim question; mixed practice; brain dump
p.19–20	Answer key 答案速查	Mark honestly, then re-write wrong answers in full

Revision tracker 复习打卡

☐ p.2–3 species & aim ☐ p.4–5 sample & box ☐ p.6–9 phases ☐ p.10–11 results ☐ p.12–14 evaluation ☐ p.15–18 exam skills

The whole study in one sentence 一句话总结

Given the same box task, **children** (mean 28 months) abandoned their own learned strategy to match a majority of familiar peers (12 of 18 switched), while **chimpanzees and orangutans** almost exclusively stayed with what they knew (10/12 and 8/12 stayed), so conformity to peers emerges **early and distinctively in humans**.

Why compare species? + Aim

Fill the gap 填空

Haun et al. investigated conformity between _____ and non-human peers to see whether social conformity was _____ to humans.

_____ were used because they are the most similar _____ to humans.

A **conspecific** is a member of one's own _____. Each participant watched three familiar _____ peers.

The logic 逻辑链

Complete: if even our closest relatives ignore the peer majority, copying the crowd is _____; if they copy too, conformity is much _____ than our species.

中文理解 为什么要拉上猿

想证明"从众是人类特有的"，光测人没用，得找个**最像人的对照组**。
黑猩猩和红毛猩猩就是对照。conspecific 指同类：孩子看孩子，猩猩看猩猩，谁都不被异类带偏。

Fill the aim 填目的

To investigate human and non-human animals' tendencies to _____ their behaviour to a _____ of their peers in a similar situation.

Specifically, whether two-year-old children and primates would adjust an _____ acquired behaviour strategy, following exposure to a majority of peers displaying an _____ effective but different strategy.

Two phrases 两个短语

Phrase	Why it matters (fill in)
"Individually acquired"	
"Equally effective"	

中文理解 目的里的两个机关

individually acquired：策略是自己先学会的，跟风才有可比性。
equally effective：同伴的办法一样好用，换过去没有任何实际好处，剩下的全是社会影响。

Fill the table 填表

Group	Number	Sex split	Mean age
Children			
Chimpanzees			
Orangutans			

Month conversion 月份换算

28 months ≈ _____; 121 months ≈ _____ years; 102 months ≈ _____ years.

中文理解 数字口诀

18 个孩子、12 只黑猩猩、12 只红毛猩猩，性别各半上下，均值 28 / 121 / 102 个月。
考试问样本，直接报这组数：28 个月约两岁三个月。

Fill the features 填特征

The box had _____ sections of different colours, arranged horizontally. The two outer sections were of _____ height; the middle section was _____.

Each section top had a _____ in it. A ball placed in a hole triggered a _____ dispensed at the bottom.

The researchers controlled which holes had an _____ trigger.

The box was on the _____ for children; attached to the outside of a _____ mesh for the primates.

Rewards: _____ for primates, _____ for children.

Why three sections 为什么要三格

One hole cannot measure conformity. Three sections give every choice a home: the _____ section (learned), the _____ section (demonstrated), and the _____ one (coded as 'other response').

中文理解 装置里的心思

三格三色，只有一个格子的机关是活的。参与者先认定"我的格子"，再看同伴全去按另一格。
第三格是给编码员留的分类抽屉。学会的、被示范的、第三种，各有去处，数据才干净。

Fill the gap 填空

During the initial phase, all participants learned that a ball would go into _____ hole, but that only _____ would dispense a reward.

Learning was measured as dropping the ball into the correct section _____ out of _____ times.

Why the criterion 为什么定 8/10

Eight out of ten shows the strategy was genuinely _____, not _____. Everything measured later rests on a strategy the participant had already _____ alone. That is what "individually acquired" means in practice.

中文理解 先学会，再看戏

8/10 及格线保证每个人都**真会了**自己的方法，后面的换与不换才有意义。

这一步是整个实验的地基：没学会的人，"stay"只是不会，"switch"只是瞎试。

Fill the details 填细节

The participant was taken _____ metres away and watched _____ familiar conspecific peers interact with the box one at a time.

The peers were labelled as _____. They were trained to prefer one colour section, _____ from the section the participant had learned dispensed the reward.

Each demonstrator placed the ball and received a reward, and did this _____ times, producing _____ demonstrations in total.

The ball was handed over only when the participant was _____; trials were _____ if the participant was not paying attention.

中文理解 两个堵嘴的细节

示范者必须是**熟人**：测的是对熟悉同伴的从众。

球只在参与者**看着的时候**发：六次示范一次不漏进眼睛，"没看见所以没换"这条路被提前堵死。

Fill the test phase 填测试

After _____ seconds, participants were given _____ balls, one at a time. All three choices were _____ regardless of the hole chosen.

Choices were video recorded and coded by _____ independent observers as one of three responses: _____ (to the majority), _____ (with their own preference), or _____ _____.

The score 记分

'Stay' responses were _____ from 'switch' responses. A score of _____ meant they chose their preferred response; _____ meant they changed to match the peer majority. Negative scores demonstrated _____; positive demonstrated _____.

The reward detail 奖励细节

Every hole pays now, so switching costs nothing and staying earns nothing extra. Whatever the participant does next is pure _____ _____.

中文理解 一个减法定方向

switch 减 stay：正数跟风，负数守旧，范围 −3 到 +3。
全部选择都有奖励 = 换不换全凭社会影响，这步设计把"实际好处"这个干扰项清零。

Procedure rehearsal 程序复述 + Results: Table 6.3

Three stages, three marks 三阶段三分

Write the procedure from memory in three stages. Markers: learn → watch → choose.

Firstly, learn:

Secondly, watch:

Thirdly, choose:

Self-check 自检

☐ 8/10 criterion ☐ three demonstrators × twice ☐ 30 seconds, three balls ☐ all choices rewarded ☐ two independent observers

> **中文理解 三分怎么拿**
> firstly / secondly / thirdly 就是得分框架，一阶段一分。
> 写完对着上面五个勾自查，漏一个细节补一句。

Fill the table 填表

Participants	Switch	Stay	Other response
Children (n = _____)			
Chimpanzees (n = _____)			
Orangutans (n = _____)			

Read the pattern 读规律

_____, but not primates, were more likely to change from an initial preferred strategy to that of their peers. Children conformed in over _____ of trials. The primates almost exclusively _____ with their preferred choice.

Score each group 算分

Switch − stay: children = _____; chimpanzees = _____; orangutans = _____. Only one group lands on the positive side.

> **中文理解 12/6、2/10、2/8**
> 孩子 12 换 6 守，黑猩猩 2 换 10 守，红毛猩猩 2 换 8 守 2 其他。
> 减法一算：+6、−8、−6。正负号就是结论的方向盘。

Fill the conclusion 填结论

In a situation where children, chimpanzees and orangutans observe a conspecific peer majority perform a behavioural strategy different from one they have learned, it was _____ who were more likely to _____ their behavioural strategy than primates.

Translate to topic language 翻成课题语言

Conformity to peers shows itself _____ in human development, by age _____, and it shows itself where our closest relatives show _____. The tendency to move with the majority does not need years of _____ or culture to appear.

中文理解 结论一句话

同样的题、同样的同伴示范，只有孩子大批换方法。
跟风是人类的出厂设置，两岁就到货，不用等教育和文化安装。

Four weaknesses 四个弱点

Weakness	The claim	The consequence (fill in)
Artificial task	Watching a conspecific place a ball for a reward is _____ a typical everyday task	Change shown under contrived conditions; may not reflect conformity in everyday situations such as the _____
Captive primates	The primates were _____	Behaviour may not reflect that of _____ chimpanzees and orangutans
Individual variation	Considerable variation in conformity _____ individuals	Findings may not _____ beyond the sample tested
No follow-up	Whether the peers' influence had any _____ effect was not tested	We cannot be certain the behaviour change _____

The fairness point 公道话

The same artificial task cuts both ways: conformity was at least _____ measured as 'switch', 'stay' or 'other response'. Contrived does not mean sloppy.

中文理解 弱点四连

任务假、猿圈养、个体差异大、长期效果没测。
每条配一句后果。答题挑两条展开就够。

Evaluation: strengths + Application + exam focus

Three strengths 三个强度

Strength	What it means (fill in)
Standardised procedures	All children and primates took part in exactly the _____ way, so the behaviour adjustments can be _____
Cause pinned down	Changes in behaviour were a _____ result of observing a peer demonstrating an alternative strategy
Familiar peers	The peer was _____ to the participant, so the findings reflect conformity to someone familiar, and not a _____

Chain the strength 链条化

Standardisation → same procedure for every participant → behaviour change can only come from the _____ → cause and effect are clear → results can be _____.

中文理解 强度三连

流程标准化（三个物种走完全相同的流程）、因果清楚（变化只能来自同伴示范）、同伴是熟人。
每条补一句"所以能确认什么"，就是完整评价段。

Fill the applications 填应用

Knowing that _____ are a source of social influence that mediates behaviour change can be used to encourage compliant behaviours: using peers to pick up _____ or turn off _____.

If we know we are consuming more _____ than our neighbours, it may influence household owners to reduce energy consumption themselves.

Compulsory vs option 必考与选考

You can be asked for _____ details of the compulsory studies (Moscovici, Burger), but only _____ questions about your option study. General questions include aim, sample, procedure, results, conclusions, strengths, weaknesses and improvements.

The uniform scenario 校服情境

Textbook prompt: promoting a uniform code at your school. Using Haun et al.'s research, one lever stands out: make the desired behaviour something students see _____ doing.

中文理解 应用题模板

让**同伴示范**目标行为（捡垃圾、关电器、穿校服），比老师喊话省力。
电费例子最直白：知道"比邻居用得多"，大多数住户会自己降下来。

Exam skills I — the aim question + Exam skills II — the procedure question

You will have learnt about a study by Haun et al. (2014) Children conform to the behaviour of peers; other great apes stick with what they know. Describe the aim of the contemporary study in Social Psychology. (from the chapter checkpoint)

Plan it 列提纲

General tendency (one sentence): _____

Specifics: who, what kind of strategy: _____

Mark-sense 分感

The aim answer needs _____ layers: the general tendency to adjust to a peer majority, and the specific version (children + primates, individually acquired strategy, equally effective alternative).

中文理解 目的题两层写

第一层：人和动物会不会向同伴多数靠拢。

第二层：具体到两岁孩子和猩猩、自己学会的策略、同样好用的替代策略。两层齐了才满分。

In social psychology, you will have learned about the following contemporary study in detail: Haun et al. (2014) Children conform to the behaviour of peers; other great apes stick with what they know. Describe the procedure used in this study. (3 marks)

Write it 写三句

Firstly:

Secondly:

Thirdly:

Score self-check 打分自查

☐ 学习阶段写了 8/10 标准 ☐ 示范阶段写了 3 人各 2 次 ☐ 测试阶段写了 3 球 + 全部有奖 + 两名编码员

中文理解 别跑题

procedure 题写 aim、sample、results 都不给分（textbook exam tip 原话）。

三句话全部落在"做了什么"上，一个阶段一分。

Match the sample 对样本

Sample described	Which study?
Female students of liberal arts, law or social science, in groups of six	
70 participants from adverts; 29 male, 41 female; mean age 42.9 years	
18 two-year-old children, 12 chimpanzees, 12 orangutans	

Findings match 对发现

Finding described	Which study?
8.42% of answers matched a consistent minority; inconsistent collapsed to 1.25%	
70% went to continue past 150 volts; watching a refusal changed little (63.3%)	
12 of 18 switched to the peer majority; the apes almost exclusively stayed	

Weakness or strength 定性

Label each as W or S: artificial ball-and-hole task _____ · two independent observers coding video _____ · captive primates _____ · familiar peers _____

中文理解 三章连测

这一页把 ch6 三个研究放在一张桌上：认样本、认发现、认评价点。
全对才算过了这一章。

Dump everything 先自测

Cover everything. Write: the aim; the three samples with numbers; the three phases; the score rule; Table 6.3; the conclusion; two strengths and two weaknesses; one application:

The 60-second drill 一分钟自检

- ☐ conspecific = 同类
- ☐ 18 孩 / 12 猩 / 12 猿；28 / 121 / 102 个月
- ☐ 学（8/10）→ 看（3 人 × 2 次）→ 选（3 球全有奖）
- ☐ 分数 = switch − stay，正从众负不从众
- ☐ Table 6.3：12/6/0 · 2/10/0 · 2/8/2
- ☐ 结论：只有孩子调整策略
- ☐ 弱点：任务假、圈养、个体差异、没测长期
- ☐ 强度：标准化、因果清楚、同伴是熟人
- ☐ 应用：同伴示范带行为改变

Answer key pp.2–9 答案（上半）

- **p.2** human; specific; Primates; animal; species; conspecific. Deeply human; older.
- **p.3** adjust; majority; individually; equally. Individually acquired = learned alone first, so switching is measurable; Equally effective = no practical reason to switch, so change is pure social influence.
- **p.4** Children 18, 9 male 9 female, 28 months; Chimpanzees 12, 7 female 5 male, 121 months; Orangutans 12, 6 male 6 female, 102 months. About two years and three months; 10; 8.5.
- **p.5** three; equal; shorter; hole; reward; active; ground; steel; peanuts, chocolate drops. Learned; demonstrated; third.
- **p.6** any; one; eight, ten. Learned; guessed; mastered.
- **p.7** two; three; demonstrators; different; twice; six; looking; repeated.
- **p.8** 30; three; rewarded; two; switch, stay, other response. Subtracted; –3, +3; no conformity; conformity. Social influence.
- **p.9** Firstly: learned one rewarding colour section to 8/10. Secondly: watched three familiar peers each demonstrate a different section twice (six demonstrations). Thirdly: three balls, all choices rewarded, video coded as switch/stay/other.

Answer key pp.10–17 答案（下半）

- **p.10** Children n=18: 12, 6, 0; Chimpanzees n=12: 2, 10, 0; Orangutans n=12: 2, 8, 2. Children; half; stayed. Scores: +6, −8, −6.
- **p.11** children; adjust. Early; two; none; schooling.
- **p.12** not; playground; captive; wild; between; generalise; lasting; lasted. Objectively.
- **p.13** same, retested; direct; known, stranger. Peer; retested.
- **p.14** peers; litter; electrical appliances; electricity. Specific; general. Peers.
- **p.15** two.
- **p.16** model answer: Firstly each participant learned that only one colour section dispensed a reward, to a criterion of 8 out of 10. Secondly they watched three familiar conspecific demonstrators each use a different, equally effective section twice (six demonstrations). Thirdly after 30 seconds they were given three balls one at a time, all choices rewarded, and two independent observers coded switch/stay/other.
- **p.17** Moscovici et al. (1969); Burger (2009); Haun et al. (2014). Moscovici; Burger; Haun. W, S, W, S.

Last look 最后过一遍

学 → 看 → 选｜switch – stay｜12/6 · 2/10 · 2/8｜**只有孩子跟着同伴换**｜弱点在任务与圈养，强度在标准化与熟人｜应用靠同伴示范｜option study 只考 general questions。
