What this workbook covers 本册讲什么

Nobody orders you to conform — a group simply does something, and you find yourself doing it too. This chapter names the **three types** of conformity (Kelman, 1958), the **two explanations** (Deutsch & Gerrard, 1955), conformity to **social roles** (Zimbardo), and one theory that covers the whole field: **social impact theory** (Latané, 1981).

How to use this booklet 怎么用

1. **Fill it in as you go.** Write the word in the blank before you check the answer key.
2. **The answer key is at the back (pp. 19–20).** Cover it. Check after each page.
3. **Pages 16–18 are exam pages.** Do them last, from memory, under time.

Content map 内容地图

Page	Topic	What you must be able to do afterwards
p.2	Foundations 基础	Define conformity; separate it from obedience; use private/public acceptance
p.3–4	Kelman's three types 三类型	Define compliance, internalisation, identification and match each to a scenario
p.5	Sherif (1935) 证据	Describe the autokinetic study and say why it shows internalisation
p.6–8	ISI and NSI 双解释	Define both; link ISI→internalisation and NSI→compliance/identification
p.9	Evaluating ISI & NSI 评价	Jenness / Sherif / Asch support; three criticisms
p.10	Social roles 社会角色	Link roles to identification; outline Zimbardo and the BBC replication
p.11–12	Social impact theory S·I·N	Recite strength, immediacy, number; the formula and the light bulb analogy
p.13	Evaluating SIT 评价	Street-corner study; reductionism and individual differences
p.14	Every name & number 收口	Cover the right column and test yourself
p.15	Exam skills 答题技巧	Command words, mark allocation, sentence frames
p.16–17	Practice A & B 演练	Short answers, then the 8-mark theory essay
p.19–20	Answer key 答案速查	Mark honestly, then re-write wrong answers in full

Revision tracker 复习打卡

☐ p.2 foundations ☐ p.3–5 three types ☐ p.6–9 ISI/NSI ☐ p.10 roles ☐ p.11–13 SIT ☐ p.14–17 exam

The whole chapter in one sentence 全章一句话

We conform in **three ways** (comply publicly, identify with the group, or genuinely internalise), for **two reasons** (we take the majority as information, or we want to be accepted), and the pressure behind it all can be measured with Latané's three forces: **Strength × Immediacy × Number**.

§1 · Foundations — the definition and the two acceptances

ANSWERS → p.19

The definition

_____ is when individuals change their behaviour or attitudes to _____ with those of the majority. The pressure to conform may be _____ or _____ — nobody has to say anything out loud.

(term / align / two adjectives)

Two words you must not confuse（接 1.1.2）

Term	Definition
obedience 服从	Following a _____ order from someone perceived to have _____. One man, one order.
conformity 从众	Changing behaviour to match a _____ or group — _____ order is given.

Two kinds of acceptance 两种接受

Term	What it means
private acceptance 私下接受	_____
public acceptance 公开顺从	_____

中文理解：先记住这两根轴

判断任何一种从众，问两个问题：

① 你心里**真的信了吗**？（私下接受 vs 公开顺从）

② 离开这个群体后**改变还在吗**？（持久 vs 暂时）

Kelman 的三种类型就是这两根轴组合出来的 —— 下一页。

Self-check 自查

1. The textbook lists three everyday examples of conformity: adopting the _____ style of our peer group, queuing up in an orderly manner because others are, and engaging in _____ behaviours because we are part of a risk-taking friendship group.

2. Like obedience, conformity is not necessarily bad — it can help maintain _____ in society.

3. Write one sentence in English: what makes conformity different from obedience?

§2 · Kelman's (1958) three types — the map

ANSWERS → p.19

Kelman proposed ____ types of conformity. Before memorising definitions, place each one on the map: how **deep** does the change go, and how **long** does it last?

Type	Acceptance	Why the person conforms	How long the change lasts
compliance 表面顺从	_____ only	to gain social _____ or avoid social _____	_____
identification 认同	public (wanting to belong)	we want to _____ as a member of a group	_____
internalisation 内化	_____ acceptance	we genuinely believe the majority is _____	_____

中文理解：一张表记住三种

compliance = **表面跟着走**（心里不信，人群散了就变回去）；identification = **想当"自己人"**（在圈子里就那样做，离开就不做了）；internalisation = **真的信了**（变成自己的观点，最持久）。

深度排序：compliance < identification < internalisation。

Write the definitions 默写定义

1 · Compliance:

2 · Internalisation:

3 · Identification:

§3 · The types in detail · the evidence: Sherif (1935)

ANSWERS → p.19

Details examiners look for

- **Compliance:** the change influences behaviour _____ majority pressure exists — it will _____ have a lasting effect.
- **Internalisation:** may happen because the majority holds _____ or information about how to behave — so we look to them for guidance. This type produces the most _____ behaviour change.
- **Identification:** we change our behaviour _____ of a majority in order to fit in — e.g. adopting a style of _____ when with a friendship group.

The evidence: Sherif (1935) — the autokinetic effect

The _____ effect is an optical illusion where a spot of light projected onto a screen in a dark room appears to _____, even though it is stationary. (effect / verb)

Participants estimated how far the light moved first _____, then in _____. Sherif found that individual estimates _____ to match the group estimate.

Because there was _____ correct answer to how far the light moved, this conformity was probably _____. (which type, and why that matters)

中文理解：为什么"没有正确答案"是关键

黑屋里光点其实没动，但每个人看到的"移动"都不一样 —— 这是**模糊情境**（ambiguous situation）。别人是我们唯一的信息来源，所以"跟大伙儿一致"是理性的。**信了**，就是 internalisation。

对比记忆：Asch 的线段任务**答案明显**，还照样从众 —— 那就是另一条解释了（NSI，p.7）。

Exam sentence 背这一句

"Sherif (1935) used the autokinetic effect and found that individual estimates of light movement _____ to the group estimate. As there was no correct answer, this suggests _____ — people genuinely accepted the majority view because it was their only source of information."

§4 · Spot the type — exam-style scenarios

ANSWERS → p.19

For each scenario: name the type, then give the **one clue** in the wording that gives it away. The clue matters more than the label — that clue is your "because…" in the exam.

Scenario	Type	The clue
An individual moves to a different country and adopts the customs and traditions of the new culture in order to become a citizen of that country.	_____	_____
A child joins a cricket club and shows support by wearing the team kit and praising the team's skills while at their matches.	_____	_____
An employee says they agree with their supervisor's decision to reduce break times, even though the employee does not privately agree.	_____	_____
A student starts university and goes to parties with the students they live with so they are part of the friendship group.	_____	_____
A guest at a restaurant is treated rudely by the waiter. At the end of the meal the others leave a tip, so the guest also leaves a tip even though he does not want to.	_____	_____

找线索的诀窍

· "does not privately agree / does not want to" → **compliance**
· "while at… / so they are part of…" → **identification**（身份或成员资格在，行为才在）
· "in order to become / genuinely adopts" → **internalisation**
考试写法："This is **[type]** because **[clue]**." 一句拿 2 分。

Your own examples 写你自己的例子

The examiner rewards everyday examples. Write one of your own for each type:

Compliance:

Identification:

Internalisation:

§5 · Explanations 1 · informational social influence

ANSWERS → p.19

_____ Deutsch and Harold _____ (1955) proposed two forms of social influence which explain conformity: _____ social influence and _____ social influence.

Informational social influence（ISI 信息性社会影响）

- Happens where we are _____ of how to act or think, so we look to _____ to guide our actions.
- We conform because we believe the majority is the _____ way to behave — and we accept it.
- Explains conformity in _____ situations.
- Involves a _____ judgement based on the information available.
- Leads to _____ — we genuinely believe the majority view (_____ acceptance).

The textbook example

In a high-end restaurant, a diner looks at _____ to see which _____ to use for their starter course, because they do not know which fork is correct.

中文理解：一句话抓住 ISI

“我不知道，所以他们大概知道。”

触发条件：**不确定**（ambiguous）。过程：理性判断（rational）。结果：真的信 → internalisation（私下接受）。

关键词背下来：ambiguous · rational · information · correct · internalisation。

Think like a psychologist（课本活动）

Climate change: efforts are being made to reduce carbon footprints, reduce food waste and recycle. Using ISI and NSI, suggest how behaviour change could be encouraged. Write two sentences — one per explanation.

§6 · Explanations 2 · normative social influence

ANSWERS → p.19

Normative social influence（NSI 规范性社会影响）

- We conform because we have a need to be _____ and to _____ into a group — or to avoid _____.
- _____ pressure is a common form, particularly in _____ when we want to feel a sense of belonging.
- It can result in the types known as _____ and _____ — public acceptance without genuine belief.

The textbook example

In a friendship group, many members start listening to a new musician. _____ all members of the group like this music — but they _____ buy tickets to see the musician play live.

The evidence: Asch (1956)

Asch demonstrated NSI in a series of experiments where participants sometimes selected an answer that was _____ incorrect because of _____ pressure to conform to the group judgement. The correct answer was clear — so they could not be conforming for information. (Full detail in 1.1.5.)

中文理解：一句话抓住 NSI

“我知道他们不对，但我不想被孤立。”

触发条件：**想被接受 / 怕被拒绝**。结果：公开顺从但心里不信 → compliance / identification。

考试连招（必背）：ISI → internalisation；NSI → compliance + identification。写反了就丢分。

Sort the links 连线收口

Explanation	Type(s) it produces	Acceptance
Informational (ISI)	_____	_____
Normative (NSI)	_____	_____

Your own examples

Write one everyday example of NSI from your own experience:

§7 · The evidence for ISI and NSI（填关键内容）

ANSWERS → p.19

Study	What happened	What it shows
Jenness (1932)	Participants judged how many _____ were in a glass bottle individually, then provided a negotiated _____ estimate, then a _____ individual estimate.	Individuals shifted their second estimate _____ the group estimate → _____
Sherif (1935)	Autokinetic effect: estimates of light movement in a dark room.	Estimates converged _____ people were unsure of their answer → _____
Asch (1956)	Line judgement task; majority gave obviously _____ answers.	Participants gave wrong answers despite the clear correct one → _____

The catch — one criticism built into the evidence

These studies support ISI and NSI as explanations. However, they were conducted in controlled _____ conditions. While they demonstrate the process of majority influence, they tell us little about social influence in _____ situations, such as peer pressure in a school or workplace.

Evidence table 用法

评价题里 ISI/NSI 的支持证据三选二就够：Jenness（模糊任务·豆子）、Sherif（模糊任务·光点）、Asch（明确任务·线段）。

注意结构：**两个模糊任务支持 ISI，一个明确任务支持 NSI** —— 任务性质决定支持哪条解释，这个对应关系本身就是分析点。

Numbers to quote 可引用的细节

Jenness: ____ estimates in total (first individual → group → second individual). Sherif: light in a _____ room. Asch: the answer was _____ incorrect, yet people still conformed.

§8 · Evaluating ISI & NSI — three criticisms

ANSWERS → p.19

Criticism	What the point is	Consequence 对结论做了什么
LAB ONLY **实验室证据**	Supporting studies (Jenness, Sherif, Asch) were all conducted in controlled _____ conditions.	_____
MOTIVATION **忽略动机**	The explanation fails to take account of the underlying _____ for why someone may choose to conform or not — e.g. keeping to speed limits simply for personal _____.	_____
INDIVIDUAL DIFFERENCES **忽略个体差异**	It ignores the role of _____ factors, gender and _____ values that influence conformity.	_____

写法模板

"One criticism is that **[point]**. This matters because **[why]**, which means the explanation **[what it cannot do]**."

例："One criticism is that the supporting evidence comes from laboratory tasks. This matters because real-world conformity — such as peer pressure at school — may work differently, which means we cannot be sure the explanations apply beyond artificial situations."

Balance it 收口

In two sentences: is ISI+NSI still a useful account of conformity despite these criticisms? Give a judgement with one piece of evidence.

Bridge to the next sections 通向后面两节

The two criticisms above — ignored motivation, ignored individual differences — are exactly what the next two sections supply: _____ (roles we play) and _____ (a theory with strength, immediacy and number).

§9 · Conformity to social roles — Zimbardo and after

ANSWERS → p.19

The concepts

Social situations are governed by social _____ — unwritten rules about how to behave. Individuals adopt or are prescribed social _____, behaving according to the norms of that role. (norms / roles)

Conformity to a social role involves a type of conformity called _____: we conform to the norms of the role _____ — but not when we are out of it. (type / when)

The textbook example

Being a _____ is a role that requires certain norms of behaviour — an upstanding citizen and role model. A teacher conforms to the role at school, but may not during school _____. We all play _____ social roles and adjust our behaviour accordingly.

The studies

Study	What it found
Zimbardo et al. (1973)	College students played prison guards or prisoners in a simulated prison at _____ University. Over a short period the 'prisoners' became _____, and the 'guards' became _____ and controlling — they had adopted the roles they were given.
Reicher and Haslam (BBC)	The replication showed conformity to social roles is _____ unthinkingly playing a role — it is _____ and influenced by factors such as _____ with the group you represent.

中文理解：为什么复制结论不同也重要

Zimbardo 说"角色太强，一穿上就变了"；BBC 复制版说"没那么简单，关键看你是否**认同**这个群体"。
考试里这是一对现成的 evaluate 素材：Zimbardo 是证据，Reicher & Haslam 是**边界条件** —— 角色从众不是自动发生的。

Exam sentence

"Conformity to a social role is _____, because the person adopts the role's norms only while they are in that role — for example a teacher behaves according to the role at school but not during the holidays."

§10 · Social impact theory — source, target, S·I·N

ANSWERS → p.19

The theory

_____ (1981) proposed that we are greatly influenced by the actions of others: we can be persuaded, _____, threatened and supported by other people. This is known as social _____. (theorist / verb / noun)

The _____ is the person being impacted on; the _____ is the influencer. In conformity, the source is the _____ and the target is the _____.

Three social forces

Force	Definition	Everyday example
strength	Real or perceived _____, legitimacy or _____ of the source.	A police officer has legitimate status.
immediacy	The _____ or distance between source and target.	A majority standing next to you vs one on the phone.
number	How many _____ and targets are in the situation.	More people giving the wrong answer…

The formula and the catch

The impact is _____ and divisional — the combined effect of strength, immediacy and number is _____ than their individual effects. Latané expressed this as: _____, where I is the impact / conformity shown by the target.

Number has a limit: a huge majority of one hundred will _____ have a greater influence than a majority of fifty.

中文理解：S·I·N 三个力一起作用

记法：**强不强（Strength）、近不近（Immediacy）、多不多（Number）**。三者**相乘**不相加 —— 有一项弱，整体影响就大打折扣。

灯泡类比：第一颗灯泡带来的亮度最大，之后每加一颗，增亮越来越少 —— 所以 100 人的多数未必比 50 人更有影响力。

Exam prompts（课本 exam tip）

“Describe a theory” questions need **no evaluation**. Revise SIT with four prompts and let each trigger one sentence: **strength**（已给例子）· **number**: _____ · **immediacy**: _____ · **multiplicative**: _____

§11 · SIT applied — to the types, to obedience, to society

ANSWERS → p.19

SIT links back to the three types

Type	What SIT says
compliance	Explained by _____ social influence: a majority with S, I and N pressures the individual to conform _____ while privately disagreeing.
identification	Also _____ influence: the majority's perceived power motivates the individual to _____ with the group norms.
internalisation	Explained by _____ social influence: a strong, close, numerous majority is seen as _____, so the individual internalises its beliefs.

SIT also explains obedience

Authority figures who are perceived to be _____ (strength), who are _____ to the individual, and who are _____ in number will be more likely to command obedience.
Link to 1.1.2: Milgram's Experiment 7 removed _____ (immediacy) — and obedience fell to 20.5%.

Wider issues: social engineering or social control?

Latané called the useful application of his theory _____ — using knowledge of social impact to decide:

- who to appoint to a position of _____ because of the strength of their influence;
- how many _____ should be in a classroom or colleagues in a work environment;
- how to deal with issues of _____, because the number of people in a crowd determines the impact others may have.

Others might consider this a form of social _____.

> **中文理解：一个理论管两章**
> SIT 是 Topic A 里少见的**通用理论**：既能解释从众（1.1.4）也能解释服从（1.1.1/1.1.2）。考试问 “describe a theory of conformity or obedience”，SIT 性价比最高 —— 一套 S·I·N 用两处。

§12 · Evaluating SIT — the street-corner study and two criticisms

ANSWERS → p.19

Supporting evidence

Berkowitz, Bickman and Milgram (1969), City University of New York: between ____ and ____ confederates congregated on the street and craned their necks to look up at the sixth floor. Milgram recorded from a sixth-floor window and counted _____. (what was counted)

Finding: increasing the number of confederates _____ the number of passers-by imitating — but the effect _____. This supports the force of _____ and its diminishing returns.

Asch (1956) agrees: conformity rose up to a majority of ____ confederates; larger majorities produced _____ further increase. One _____ reduced conformity.

Criticisms

Criticism	What the point is
REDUCTIONIST 简化论	SIT views individuals as _____ receivers of others' behaviour, disregarding the _____ nature of social interaction and what the target themselves brings to the situation.
INDIVIDUAL DIFFERENCES	Everyone is different — some of us are more _____ and therefore more _____ to majority influence. SIT _____ the nature of human interaction.

写法模板

"A strength of SIT is that it is supported by field evidence: Berkowitz, Bickman and Milgram (1969) found more confederates produced more copycat behaviour, but only up to a point — *exactly the diminishing effect of Number the theory predicts*."

"However, SIT is reductionist: it treats the target as passive, which means it cannot explain why the same majority produces conformity in one person and resistance in another."

Balance it 收口

Does the street-corner study + Asch evidence outweigh the reductionism criticism? One judgement sentence:

§13 · Every name and number on one page

Cover the right column and test yourself

Clue	Answer
Proposed the three types of conformity (year)	Kelman (1958)
The three types, deepest change first	internalisation → identification → compliance
Public acceptance without genuine belief	compliance
Type tied to group membership — temporary	identification
Most permanent change — genuine belief	internalisation (private acceptance)
Autokinetic effect study (year)	Sherif (1935)
Why Sherif's study shows internalisation	No correct answer existed — people genuinely adopted the group estimate
Proposed ISI and NSI (names, year)	Deutsch and Gerrard (1955)
ISI leads to which type / acceptance	internalisation / private acceptance
NSI leads to which types / acceptance	compliance and identification / public acceptance
Beans-bottle study demonstrating ISI (year)	Jenness (1932)
Study demonstrating NSI with obvious wrong answers	Asch (1956)
Conformity to a social role is which type	identification
Stanford prison study (researchers, year)	Zimbardo et al. (1973)
BBC prison study researchers	Reicher and Haslam — role conformity is dynamic, depends on identification
Social impact theory (theorist, year)	Latané (1981)
The formula	$I = f(S \cdot I \cdot N)$ — multiplicative
Street-corner study (researchers, year)	Berkowitz, Bickman and Milgram (1969)
Street-corner study finding	More confederates → more copying, but the effect levelled off
Latané's term for applied social impact	social engineering (seen by some as social control)

Self-test routine

Fold this page so only the left column shows. Say the answer out loud before moving down. Mark any row you cannot answer, then re-learn only those rows.

§14 · Exam skills — command words, marks, sentence frames

USE WITH pp. 16–17

Command words 指令词

Word	What it wants	What NOT to do
Describe	Give an account of the theory or type — key elements only. Pure AO1.	Do not evaluate or make judgements (textbook exam tip).
Explain	Use the concept to account for the scenario — one point + one reason per mark.	Do not just restate the scenario.
Evaluate	Strengths and limitations, each with a consequence.	Do not produce a list without "which means…".

How many marks, how much writing

Marks	Typical demand	Time
2	Use the concept + one developed reason. Name the type *and* give the clue.	2–3 min
4	Two developed points (e.g. two scenarios explained, or description + evidence).	5 min
8	Half AO1 (describe the theory), half AO3 (judgement and evidence). Four paragraphs.	10–12 min

Sentence frames 万能句式

Spot-the-type: "This is **[type]** because **[clue]** — [they do not privately agree / the change depends on membership / they genuinely accept it]."

Explain a scenario: "[Name] conforms because of **[ISI/NSI]**: [situation is ambiguous / need to be accepted]. This leads to **[type]**, shown by [evidence from the scenario]."

Describe SIT: "Latané (1981) proposed that impact on a target is a function of the source's **strength**… **immediacy**… **number**… combined **multiplicatively**: I = f(S·I·N)."

> **Marking habit 加分习惯**
> Every claim needs a **name** and a **year** — Kelman (1958), Sherif (1935), Deutsch and Gerrard (1955), Zimbardo et al. (1973), Latané (1981), Berkowitz, Bickman and Milgram (1969). A scenario answer that names the type *and* the explanation scores double.

Common mistakes checklist 常见错误清单

☐ 混淆 obedience 和 conformity（有没有命令） ☐ 把 identification 写成 internalisation

☐ ISI/NSI 与类型连错（ISI→internalisation；NSI→compliance/identification）

☐ S·I·N 相加不相乘 ☐ describe 题写了评价（白丢时间不丢分，但挤占后面时间）

☐ 评价不给"影响"（which means…） ☐ 引研究不给名字年份

§15 · exam Practice A — short answers

Model answers → p.19

Fezile is taking an enrichment course at school which involves volunteering for local charities. She is asked by her teacher to volunteer at a local primary school to help younger children learn to read. Fezile agrees to help the children, but has no interest in teaching young children, and would rather spend her time with her friends canoeing on the river. Fezile is also asked to volunteer to train young children to canoe, and chooses not to go canoeing with her friends so that she can teach the young children instead.

Q1a — Describe, using compliance, why Fezile helped the young children to read. (2 marks)

One mark for naming compliance / public acceptance, one for linking it to the scenario.

Q1b — Describe, using internalisation, why Fezile helped to train the young children to canoe. (2 marks)

Contrast with Q1a: what is different about her motivation this time?

Q2 — Kasim is with a large group of friends at a youth club. His friends start ripping the material on the seat covers and drawing on tables. Kasim asks them to stop, but his friends laugh at him and give him a pen to join in. Kasim does not want to join in but he writes on the table. Describe, using conformity, why Kasim joins his friends in writing on the tables. (2 marks)

Which explanation? Which type? What is the clue in the scenario?

Q3 — Describe informational social influence as an explanation for conformity. (3 marks)

Three points: when it happens · why we conform · which type of conformity it produces.

Q4 — Describe social impact theory as an explanation of conformity. (4 marks)

Pure AO1 — no evaluation. Theorist · source and target · three forces · the formula.

§16 · exam Practice B — the 8-mark theory essay + brain dump

Model answer → p.20

Q5 — Describe and evaluate social impact theory as an explanation of conformity. (8 marks)

Half the marks for accurate description (AO1), half for judgement with evidence (AO3). Plan four paragraphs first.

¶	Job of that paragraph 内容	My points 我的要点
1	**Describe 1:** Latané (1981), source and target, why “social impact”.	
2	**Describe 2:** strength, immediacy, number; multiplicative; I = f(S·I·N); light bulb analogy.	
3	**Evaluate 1:** strength — Berkowitz, Bickman and Milgram (1969) street study; Asch's majority size findings.	
4	**Evaluate 2:** limitation — reductionist, passive targets, ignores individual differences; balanced conclusion.	

Brain dump — close the book 合上笔记盲测

Ten minutes. Write everything you can remember: the definition, the three types with their clues, ISI and NSI with their links, social roles, and S·I·N with the formula — from memory only.

pp.2–3 — Foundations and the three types

Definition: conformity; align; real; imagined. obedience: direct; authority. conformity: majority; no.
private acceptance — genuinely adopting the behaviours or values of the majority as your own. public acceptance — going along with the majority even if you do not agree.
Examples: clothing; risky. Conformity maintains social order.
Types table: compliance — public only; social approval; social rejection; only while the group watches (not lasting). identification — define ourselves; temporary (while in the role/group). internalisation — private; right; most permanent.
Definitions: compliance — going along with the majority for approval or to avoid rejection without genuine agreement. internalisation — genuinely accepting the majority's values as your own. identification — changing behaviour to fit in because you want to belong to the group.

pp.4–5 — Types in detail, Sherif, spot-the-type

Details: while; will not; knowledge; permanent; in the company; dress.
Sherif: autokinetic; move; alone; groups; converged; no real; internalisation.
Spot the type: ① internalisation (genuinely adopts customs in order to become a citizen) ② identification (while at matches — tied to membership) ③ compliance (does not privately agree) ④ identification (so they are part of the friendship group) ⑤ compliance (does not want to — public acceptance only).

pp.6–8 — ISI, NSI, evidence

Morton; Gerrard; informational; normative. ISI: unsure; others; correct; ambiguous; rational; internalisation; private. Example: other guests; cutlery.
NSI: accepted; fit; rejection; Peer; adolescence; compliance; identification. Example: Not; all.
Asch (1956): obviously; social.
Evidence: beans; group; second; toward → ISI. because → ISI. wrong → NSI. laboratory; real-life.

pp.9–10 — Evaluation and social roles

Criticisms: laboratory → findings may not apply to real-life conformity. motivation; safety → the explanation is incomplete — people conform for reasons other than information or pressure. personality; cultural → it cannot explain why individuals differ in conformity.
Bridge: social roles; social impact theory.
Roles: norms; roles; identification; while we are in that role. teacher; holidays; multiple.
Zimbardo: Stanford; passive; aggressive. BBC: not simply; dynamic; identification.

pp.11–13 — Social impact theory

Latané; inhibited; impact. target; source; majority; individual.
Forces: status; authority; proximity; sources.
Formula: multiplicative; greater; $I = f(S \cdot I \cdot N)$; not necessarily.
Applied: normative; publicly; normative; identify; informational; credible. Obedience: legitimate; immediate; greater; presence.
Social engineering: leadership; students; crowding; control.
Street study: 1; 15; the number of passers-by who stopped; increased; levelled off; number. Asch: three; no significant; dissenter.
Criticisms: passive; active; independent; resistant; oversimplifies.

p.16 — Q1a model (2 marks)

Fezile is showing **compliance**: she publicly goes along with her teacher's request to appear helpful, but she does not privately agree with it — she would rather be canoeing. Because compliance is only public acceptance, her helpful behaviour will last only while the teacher's pressure exists.

p.16 — Q1b model (2 marks)

Fezile is showing **internalisation**: she has genuinely accepted the value of training the children, so it has become her own belief — private acceptance. This is why she gives up canoeing with her friends even though no one is forcing her: the change is real and self-sustaining.

p.16 — Q2 model (2 marks)

Kasim conforms because of **normative social influence**: he changes his behaviour to match the majority of his friendship group even though he privately disagrees — he actually asked them to stop. His need to be accepted and to avoid rejection is stronger than his own opinion, so he complies publicly (compliance).

p.16 — Q3 model (3 marks)

① Informational social influence operates in situations where we are **unsure how to act or think** (ambiguous situations). ② We conform to the majority because we believe it is the **correct** way to behave, making a rational judgement based on the information the group provides. ③ Because we genuinely accept the majority view (private acceptance), it produces **internalisation** — the most permanent type of conformity. Sherif's (1935) autokinetic study is supporting evidence.

p.16 — Q4 model (4 marks)

① Latané (1981) proposed social impact theory: we are greatly influenced by others' actions — persuaded, inhibited, threatened and supported. ② The **source** is the influencer (in conformity, the majority) and the **target** is the person feeling the pressure (the individual). ③ Three social forces determine the impact: **strength** (status, legitimacy, authority of the source), **immediacy** (proximity between source and target) and **number** (how many sources there are — though the effect levels off, like light bulbs in a room). ④ The effect is **multiplicative**: impact is a function of all three combined — **I = f(S·I·N)** — so a source weak on one force has less total impact.

p.17 — Q5 model (8 marks)

¶1 Describe. Latané (1981) proposed that we are greatly influenced by the actions of others — we can be persuaded, inhibited, threatened and supported. He distinguished the **source** of influence (in conformity, the majority) from the **target** (the individual feeling real or imagined pressure).

¶2 Describe. Three social forces determine the impact: **strength** (the perceived status or authority of the source), **immediacy** (how close the source is) and **number** (how many sources — but with diminishing returns, like light bulbs: the first bulb adds the most light). The forces combine **multiplicatively**: I = f(S·I·N).

¶3 Evaluate — support. The theory is supported by field evidence: Berkowitz, Bickman and Milgram (1969) placed 1–15 confederates on a street craning their necks upward, and found more confederates produced more copycat behaviour — but the effect **levelled off**, exactly as the force of number predicts. Asch (1956) similarly found conformity rose to a majority of three but no further, and fell when a single dissenter appeared.

¶4 Evaluate — limitation and conclusion. However, SIT is **reductionist**: it views individuals as passive receivers of influence, ignoring what the target brings to the situation. Everyone differs — some are more independent and resistant — so the theory oversimplifies social interaction and cannot predict who will conform. Overall, SIT is a useful framework for comparing situations, but needs supplementing with individual-difference factors to explain actual behaviour.

Final check — what you must be able to write without looking

The ten things 十件事

1. The definition of conformity — change to **align with the majority**, real or imagined pressure, **no order given**.
2. **Private** vs **public acceptance** — believe it vs go along with it.
3. **Kelman (1958)**: compliance → identification → internalisation, in order of depth.
4. The clue-words that identify each type in a scenario.
5. **Sherif (1935)** autokinetic effect — no correct answer → internalisation.
6. **Deutsch and Gerrard (1955)**: ISI (ambiguous, rational) → internalisation; NSI (belonging, rejection) → compliance + identification.
7. **Jenness (1932)** beans; **Asch (1956)** lines — the evidence pair.
8. Social roles are **identification**; **Zimbardo et al. (1973)** guards became aggressive; **Reicher and Haslam** — it is dynamic.
9. **Latané (1981)**: source, target, **Strength × Immediacy × Number**, I = f(S·I·N), light bulb analogy.
0. **Berkowitz, Bickman and Milgram (1969)**: effect levels off; plus reductionism criticism.

The three types in one table — write it from memory

Type	Acceptance	Duration	Explanation behind it
compliance			
identification			
internalisation			

What is still shaky 还不熟的地方

Write down only the things you got wrong when checking this booklet. Come back to just these lines before the exam.

下一步 **Next**

1.1.5 puts these concepts to the test: Asch's (1951, 1952, 1956) line-judgement experiments are the classic research into conformity — you will see NSI in action, and find out what happens when a majority is broken, shrunk, or answered in private.
