6.2.2 Bradbury and Williams (2013) — The Effects of Race on Juror Decision-Making

What this workbook covers 本册讲什么

No lab, no students, no films — this study reads **real trial records** from hung juries in four American states to ask one question: does the **racial make-up of a jury** change whether a Black defendant is convicted? This booklet covers the design, the seven control variables, the logistic regression, the five findings, and the evaluation.

How to use this booklet 怎么用

1. **Fill it in as you go** — check the answer key (pp. 19–20) after each page.
2. **Pages 4–8 (design & results) and 12 (numbers) matter most.** Do them from memory, under time.

Content map 内容地图

Page	Topic	What you must be able to do afterwards
p.2	Race and juries 引入	Explain why in-group / out-group bias matters in court
p.3	Aim and two hypotheses	State H1 and H2 in full
p.4	The sample 二手数据	4 states · 2000–2001 · hung juries · Black defendants 60%
p.5	Variables and logistic regression	Define DV, IV, and logistic regression
p.6	Seven control variables	List them and say why each is needed
p.7–8	Results and conclusion	$p < .01$ vs $p \leq 0.1$ · which hypothesis survived
p.9–10	Evaluation 评价	Strengths and limitations, each with a consequence
p.11	Socially sensitive + Batson rule	Explain the debate and the legal limit on the application
p.12	Every number 数字收口	Cover the right column and test yourself
p.13	Side by side with Loftus & Palmer	Classic vs contemporary comparison table
p.14	Exam skills 答题技巧	Command words, sentence frames
p.15–16	Practice A & B 演练	Short answers, then the evaluation answer
p.17–18	Misconceptions + Final check	Trap answers and a memory sweep
p.19–20	Answer key 答案速查	Mark honestly, then re-write wrong answers in full

Revision tracker 复习打卡

☐ p.3 hypotheses ☐ p.4–6 sample & design ☐ p.7–8 results ☐ p.9–11 evaluation & debate ☐ p.12 numbers ☐ p.13 comparison ☐ p.14–16 exam

The whole study in one sentence 一句话总结

Using **secondary data** from real **hung-jury** trials in four American states (2000–2001), Bradbury and Williams found that juries composed mostly of **white** jurors were **more likely to convict Black defendants** ($p < .01$, H1 supported), mostly-Hispanic juries showed the same **direction** but only at $p \leq 0.1$ (H2 not supported), and mostly-Black juries were **least likely to convict** — so the **diversity of the jury pool** can bias the outcome of a trial.

Race and Juries — Why This Study Exists

The problem the study attacks 问题所在

Race and crime is heavily researched: are some races **over-represented** in crime statistics and prisons? Are some races **treated differently** at different stages of the justice system? Bradbury and Williams zoom in on one stage — **how the racial make-up of the jury shapes the verdict**.

> **The psychology behind it 心理学背景**
> **In-group / out-group bias（内群体/外群体偏差）**：我们天然偏袒「自己人」(in-group)，对「外人」(out-group)更苛刻。陪审员也是人 —— 如果陪审团的种族构成一边倒，被告可能因为「属于外群体」而被判得更重。

What makes this study different 这研究的特别之处

Loftus & Palmer (1974) — classic	Bradbury & Williams (2013) — contemporary
Students watching **film clips** in a lab	**Real trials** that actually happened
Memory for speed estimates	Actual **verdicts** (convicted or not)
Experiment — the researchers control everything	**Secondary data** — the trials already happened

Warm-up 热身填空

1. The bias where we favour "our own group" is called _____-group bias. (in)

2. This study uses _____ data — records of trials that already took place. (secondary)

3. The classic study in this pair used _____ juries in a laboratory; this one uses real court records.

The Aim and the Two Hypotheses

Aim 研究目的

> To examine whether the **racial make-up of a jury** affects its **decision-making**.

Two hypotheses 两条假设

Label	The hypothesis, word for word
H1	Black defendants will be more likely to be convicted by juries composed of a higher number of **white** jurors.
H2	Black defendants will be more likely to be convicted by juries composed of a higher number of **Hispanic** jurors.

怎么记住 H1 / H2

两条假设结构完全一样，只有陪审团的多数族群不同：**H1 = white（白人）**，**H2 = Hispanic（拉美裔）**。背的时候只背「谁当多数 → Black 被告更容易被判罪」这个句式，再往里换族群。

Write them out 默写练习

H1: Black defendants will be more likely to be convicted by juries composed of a higher number of _____ jurors.

H2: Black defendants will be more likely to be convicted by juries composed of a higher number of _____ jurors.

Exam tip 考点提示

被要求「写出假设」时，必须包含**方向**（more likely to be convicted）和**双方的族群**。只写「race affects verdicts」没有方向，拿不到满分。

Where the data came from 数据来源

Feature	Detail
Type of data	**Secondary** — from an earlier study of real trials
Location	Four American states: **Arizona, California, New York, Washington, DC**
When	Held between **2000 and 2001**
Which cases	Only **hung jury** cases — where juries **could not agree** on guilt
Defendants	Only trials with **Black** defendants — they made up **60%** of the cases
What was recorded	Demographics of the jury, jury selection, offence type

为什么专挑 hung jury（僵局陪审团）？
僵局 = 陪审团内部**意见不一致**。只有在「结果本来就摇摆」的案子里，陪审团的**构成**才可能成为压倒天平的那根手指。如果所有案子都一边倒地定罪，组成根本没机会起作用 —— 这正是研究者选样的聪明之处。

Fill in the blanks 填空

1. The data was _____ (not collected fresh) — from real trials in _____ American states.

2. The trials were held between _____ and _____.

3. Only cases with a _____ jury were chosen — where jurors could not agree.

4. Only trials with _____ defendants were examined, because they made up _____% of the cases.

The variables 变量

Variable	How it was measured
DV 因变量	Whether the trial resulted in a **conviction** — coded **1 = conviction, 0 = no conviction / hung jury**
IV 自变量	The **racial make-up of the jury**: percentage of Black, white and Hispanic jurors
Controls 控制变量	**Seven** variables measuring the strength of the prosecution case (next page)

Key term: logistic regression 关键术语

logistic regression（逻辑回归）
A statistical analysis that examines the relationship between the **dependent variable** and the **independent variables** being investigated, and calculates the **probability** of them being related.

为什么不能用「算平均数」？
因为结果是**「是/否」**（判罪 or 不判罪），不是连续数字。你不能说「陪审团平均判罪 34.2%」，只能说「这种陪审团构成下，判罪的**概率**是多少」。逻辑回归就是专门算这种概率的工具 —— 这也是它区别于 Loftus & Palmer（算平均车速）的地方。

Check yourself 自测

1. The DV was coded: _____ = conviction, _____ = no conviction / hung jury.

2. The IV was the percentage of _____, _____ and _____ jurors.

3. The statistical test that calculates the *probability* of a relationship is called _____ _____.

The Seven Control Variables

Why controls at all 为什么要控制变量

Imagine a jury convicts — was it because jurors were **mostly white**, or because the prosecution's case was simply **overwhelming**? To isolate the effect of race, the researchers measured **seven control variables** capturing how strong each case was, ensuring there was a sufficient case for the jury to decide on.

List them 默写七项

1. Quantity of _____ (evidence)
2. Strength of the _____ (case)
3. Length of the _____ (trial)
4. Length of the jury _____ (deliberations)
5. Presence of written _____ to the jury (instructions)
6. Case type: _____ or _____ offences (violence / property)
7. Lawyer type: _____ or _____ (public / private)

> **Exam tip 考点提示**
> 七个控制变量是这研究最常见的考点之一。记忆分组：**证据两条**（数量、强度）＋ **时间两条**（审判时长、商议时长）＋ **材料一条**（书面指示）＋ **类型两条**（罪行类型、律师类型）。考「name two control variables」时挑最好写的：quantity of evidence、strength of the case。

Fill the table 结果表

Finding	Statistical status
Black defendants are _____ likely to be convicted by juries composed mostly of **Black** jurors.	Supports the general effect
Juries comprising mostly **white** jurors are _____ likely to convict Black defendants.	Significant at **p < .01** — _____ supported
Juries composed of mostly **Hispanic** jurors were more likely to convict Black defendants.	Only significant at **p ≤ 0.1** — _____ cannot be supported
All juries were less likely to convict for a _____ crime than a substance-related offence.	Clear effect
All juries were less likely to convict for a _____ offence than a substance-related offence.	Only significant at **p ≤ 0.1**

The p-value trap 显著性陷阱（考试最爱）

p < .01 = 巧合概率不到 1%，**高度显著** → H1 **成立**。

p ≤ 0.1 = 巧合概率还有 10%，心理学惯例里**不够显著** → H2 **不能被支持**。

Hispanic 组的**方向**与 H2 一致（也判得多），但**统计上撑不住**。标准写法：「The direction supported H2, but the effect was only significant at p ≤ 0.1, so H2 cannot be supported.」

The Conclusion 结论

What they concluded 结论原文要点

- **Diversity within the jury pool** is likely to have an impact on the outcome of jury decision-making.
- Black defendants are more likely to be convicted if the percentage of **other-ethnicity** jurors is higher than the percentage of **Black** jurors.
- The **selection process** of jury members can therefore **bias** the outcome of the trial.
- Black defendants were more likely to be convicted of **substance crimes** — raising the question of whether the criminal justice system is **tougher on Black defendants for substance-related offences** generally.

Sentence completion 补全句子

1. Diversity within the _____ pool is likely to have an impact on the outcome of jury _____.

2. The selection process of jury members can therefore _____ the outcome of the trial.

3. The conviction pattern for substance crimes suggests the justice system may be _____ on Black defendants for substance-related offences.

> **一句话记忆**
> 陪审团**越不像被告**（Black 占比越低），Black 被告越容易被判罪；而且这类案子集中在**毒品相关罪行**上 —— 司法系统可能对 Black 被告的毒品案更严。

Strength 1 — Real trials (ecological validity) 真实案件

The data represented characteristics of **actual jury trials**, as opposed to mock juries. This provides more **valid** data regarding actual jury decision-making than a laboratory experiment — the findings are more **ecologically valid** than other research methodologies.

Consequence: we can trust that the race effect happens *outside the lab*, in real courtrooms.

Strength 2 — Seven control variables 控制变量充分

The controls ensured they were truly investigating the **racial composition of the jury** rather than other factors (evidence quantity, crime type…) known to influence jury decisions. This ensures a level of **validity** — findings can be confidently applied to race and jury decision-making.

Strength 3 — Corroborating evidence 旁证

Anwar et al. (2012) found Black defendants were convicted **81%** of the time by white jurors — supporting Bradbury and Williams, making the results more **reliable**.

Strength 4 — Objective coding 客观编码

Variables were **coded** (e.g. violent crime 0 = no, 1 = yes), producing **quantitative** data — more **objective** and less open to researchers' interpretation.

> **评价句式（背这个结构）**
> **Point**（真实数据）→ **Because**（不是模拟陪审团）→ **Consequence**（生态效度高，结论可信）。

Limitation 1 — Cannot replicate 无法重复

Because **real trial data** was used, it is not possible to **replicate** the court case to see if the verdicts would be the same again.

Consequence: harder to establish reliability directly.

Limitation 2 — Cannot control everything 控不干净的变量

Other factors — jurors' **personal experiences of crime**, **personal biases**, **pre-trial publicity** — may have had an unknown impact. With real trials this was impossible to control despite the attempts.

Limitation 3 — Representativeness 代表性存疑

- Real-trial data is **rare** — hard to be sure findings represent **all trials**; they may reflect an unknown **uniqueness** of these trials and jurors.
- Only trials in **America** — other countries have different judicial processes, so may not represent defendants worldwide.
- Only **Black defendants** — findings may not apply to defendants of other races; further research into other ethnic groups is required.

Limitation 4 — Coding oversimplifies 编码简化了现实

The DV coding may have overlooked that trials are **complex**: defendants can be charged with **multiple crimes**, convicted of some and acquitted of others — variations in the data would have been **omitted**.

> **一句话总结评价**
> 真实案件带来**生态效度**，也带来**失控**（不可重复、混入偏见、代表性窄、编码丢失细节）。考试时成对写：优点+后果，缺点+后果。

Socially sensitive research 社会敏感研究

This study focuses on **defendant and juror race**, so it is **socially sensitive**. Why?

- It could potentially **reinforce stereotypical (false) views** about certain ethnicities being more likely to be involved in crime, or specific crimes such as substance-related offences.
- These stereotypes may spread into the **public domain**, causing **tension between ethnic groups** or labelling groups as more criminal.
- It could be used to claim certain ethnic groups are **racist in their decision-making** — with negative implications for the groups represented this way.

The application — and its legal limit 应用与限制

Application: the research can inform **how juries are selected**, ensuring a **mix of ethnicities** to promote fairness in the legal process.

The limit: in practice this may be difficult and also **not permitted**. Under the **Batson rule** in the USA, the court is **not allowed to use a peremptory challenge to exclude a jury member because of their race**.

> **key term**
> **Batson rule**：美国法庭规则 —— 律师不得以种族为由用「无条件回避权」（peremptory challenge）排除某位陪审员。也就是说，研究证明了「构成影响判决」，但法律**禁止**按种族挑陪审员。

Quick check 快问快答

1. The name of the USA rule limiting race-based jury selection: _____ (Batson rule)

2. Two reasons this study is socially sensitive: _____ and _____

Cover the right column, test yourself 遮住右栏自测

Question	Answer
Year of publication	**2013**
Type of data	**Secondary** (real trial records)
Number of American states	**4** (Arizona, California, New York, Washington, DC)
Trial years	**2000–2001**
Which cases were selected	**Hung jury** cases
Share of cases with Black defendants	**60%**
Number of control variables	**7**
Significance level of the white-juror finding	**$p < .01$**
Significance level of the Hispanic-juror finding	**$p \leq 0.1$**
Which hypothesis was supported	**H1 only**
Corroborating study and figure	**Anwar et al. (2012)** — **81%** convicted by white jurors
Crime type both juries were MORE likely to convict	**Substance-related** offences

一句话卡片

2013 · 4 states · 2000–01 · hung juries · 60% Black defendants · 7 controls · p<.01 (H1) vs p≤0.1 (H2) · Anwar 81%.

Side by Side — Classic vs Contemporary

Complete the comparison 对照表（答案见 p.19）

Issue	Loftus and Palmer (1974)	Bradbury and Williams (2013)
Method	Laboratory _____ with film clips	Analysis of _____ data from real trials
Participants	_____ students (exp. one)	Records of real _____ in 4 states
DV	Estimated _____ of the cars; broken glass recalled	Whether the trial ended in a _____ (1/0)
IV	The _____ in the critical question	_____ make-up of the jury (%)
Analysis	Mean speed estimates compared across conditions	_____ _____ (probability of a relationship)
Ecological validity	Low — watched films, judged speed, artificial task	_____ — real verdicts in real courtrooms
Reliability	High — standardised clips and questions, replicable	Low — real cases _____ be replicated
Ethics	Deception and _____ (stress) but necessary	Public records — few consent issues, but _____ sensitive

怎么背这张表

考试常用句式：「Both studies investigate… however…」。核心反差只有两条：**实验室 vs 真实法庭**（生态效度换可靠性），**操控变量 vs 只能控制已记录的变量**。

Command words 指令词

Command word	What it demands
Describe	Give the facts — sample, variables, findings. No judgement needed.
Explain	Add the **because/why** — link cause to consequence.
Evaluate / assess	Strength **and** limitation, each with a consequence, then a verdict.

Sentence frames 万能句架

- Describe the sample: *"Secondary data was collected from real trials in four American states…, held between 2000 and 2001, using hung jury cases where…"*
- Explain a control: *"The researchers controlled for … in order to make sure the effect was due to the racial composition of the jury and not …"*
- State a result with its status: *"Juries comprising mostly white jurors were more likely to convict Black defendants, significant at $p < .01$, so H1 was supported."*
- Evaluate: *"One strength is that the data came from real trials, which means the findings are more ecologically valid than mock jury research. However, …"*

三个必写细节

① **hung jury**（选样理由）② **$p < .01$ vs $p \leq 0.1$**（哪条假设活下来）③ **Batson rule**（应用的法律限制）。少了任何一条，答案就降一个档次。

Practice A — Short Answers

Q1. State the two hypotheses investigated by Bradbury and Williams (2013). (4)

*Q2. Identify **two** of the seven control variables and explain why control variables were needed in this study. (4)*

*Q3. Explain what is meant by a **hung jury**, and why such cases were selected. (4)*

Q4. Describe the findings for mostly-white and mostly-Hispanic juries, including the significance levels. (4)

Practice B — The Evaluation Answer

*Q5. Evaluate Bradbury and Williams (2013). In your answer, discuss **one strength** and **one limitation**, each with a consequence. (8)*

Plan first — one line per box:

Strength (+ consequence)	Limitation (+ consequence)

Marking checklist 评分自查

- ☐ Named the strength precisely (real trials / ecological validity)
- ☐ Gave the consequence (findings apply to real courtrooms)
- ☐ Named the limitation (no replication / representativeness / uncontrolled biases)
- ☐ Gave the consequence
- ☐ Used a connector: "however" / "therefore"
- ☐ No generic evaluation — everything tied to *this* study

Trap or truth? 判断对错

Statement	Verdict
“Both hypotheses were supported by the results.”	**Trap.** Only H1 (white jurors, $p < .01$). H2's direction matched but $p \leq 0.1$ — not significant.
“The researchers ran new mock jury trials in a laboratory.”	**Trap.** Secondary data — real trials that had already happened.
“The study shows juries should be selected by race to make trials fairer.”	**Trap.** The Batson rule forbids using race to exclude jurors. The application is promoting a mix — not selecting by race.
“All juries were more likely to convict for violent crimes.”	**Trap.** The reverse — less likely to convict for violent and property crimes than substance-related offences.
“Anwar et al. (2012) contradicted Bradbury and Williams.”	**Trap.** Anwar *supported* them — 81% conviction by white jurors.
“Because real trial data was used, the study can be easily replicated.”	**Trap.** Real cases *cannot* be replicated — that is a limitation.

为什么这些坑有效

每个错句都是**真实知识的一半**：方向对但显著性错、数据真但来源错、应用好但法律限制漏。背「Trap or truth」表是考前性价比最高的一页。

Final Check — Five Minutes, No Notes

Ten answers from memory 十题默检

1. Year of the study: _____
2. Type of data (primary or secondary): _____
3. Number of states + one example: _____
4. Trial years: _____
5. The special kind of case selected (two words): _____
6. Percentage of cases with Black defendants: _____
7. Number of control variables: _____
8. Which hypothesis was supported (and its p level): _____
9. The US rule limiting race-based jury selection: _____
0. The supporting study + its key percentage: _____

Brain dump 空白默写

Close the booklet. Write everything you remember about Bradbury and Williams (2013) in the space below — aim for: aim → sample → variables → one finding → one evaluation point.

Page 2 — warm-up

1. in-group 2. secondary 3. mock

Page 3 — hypotheses

H1: higher number of **white** jurors. H2: higher number of **Hispanic** jurors.

Page 4 — sample

1. secondary; four 2. 2000; 2001 3. hung 4. Black; 60

Page 5 — variables

1. 1 = conviction; 0 = no conviction / hung jury 2. Black, white, Hispanic 3. logistic regression

Page 6 — controls

1. evidence 2. case 3. trial 4. deliberations 5. instructions 6. violence; property 7. public; private

Page 7 — results

Row 1: **less**. Row 2: **more**; H1 supported. Row 3: H2 cannot be supported. Row 4: **violent**. Row 5: **property**.

Page 8 — conclusion

1. jury; decision-making 2. bias 3. tougher

Page 11 — quick check

1. Batson rule 2. any two of: reinforcing stereotypes about ethnicity and crime / causing tension between groups / labelling groups criminal / claiming groups are racist in decision-making

Page 13 — side by side

Method: experiment; secondary. Participants: 45; trials (hung jury cases). DV: speed estimates; conviction (1/0). IV: verb used; racial make-up (%). Analysis: logistic regression. Ecological validity: high. Reliability: cannot. Ethics: stress; socially.

Page 15 — Practice A

Q1 H1: Black defendants more likely to be convicted by juries with a higher number of white jurors; H2: … higher number of Hispanic jurors. (1 mark each for the racial group + direction.)
Q2 Any two of: quantity of evidence / strength of the case / length of trial / length of deliberations / written instructions / case type (violence vs property) / lawyer type (public vs private). Needed to isolate the jury's racial make-up from the strength of the prosecution case.
Q3 Hung jury = juries could not agree on guilt; chosen because in undecided cases jury composition could tip the outcome.
Q4 Mostly white juries more likely to convict, $p < .01$, H1 supported; mostly Hispanic juries also more likely but only $p \leq 0.1$, H2 cannot be supported.

Page 16 — Practice B (model)

Strength: The data came from real trials rather than mock juries, so the findings have high ecological validity — we can trust the race effect exists in actual courtrooms. **Limitation:** real cases cannot be replicated, and factors such as jurors' personal biases or pre-trial publicity could not be controlled, so the conviction differences may not be due to race alone. **Verdict:** despite the limits, the corroborating evidence from Anwar et al. (2012) — 81% convictions by white jurors — makes the findings credible.

Page 18 — final check

1. 2013 2. secondary 3. four (e.g. Arizona) 4. 2000–2001 5. hung jury 6. 60% 7. seven 8. H1, $p < .01$ 9. Batson rule 10. Anwar et al. (2012), 81%

答错怎么办

把答错的题**整句重写一遍**（不是只补答案），隔天再默一次同一页。错两次以上的点，誊到 p.18 brain dump 区。
