6.1.1 Explanations for Crime and Antisocial Behaviour

How to use this workbook 使用方法

Cover the answer hints, write your own answer first, then check.每一节先自己写，再对括号里的提示。答案速查在最后一页。做错的内容标星，考前只看标星部分。

Contents map 内容地图

Page	Section	What you must be able to do
p.2	Crime vs antisocial + SFP theory 犯罪与反社会 + 自证预言	Define both behaviours; describe the four-step SFP process in order
p.3	SFP evidence 自证预言证据	Match Rosenthal & Jacobson (1968) and Jahoda (1954) to their findings
p.4	SFP evaluation 自证预言评价	Reproduce the three-part evaluation skeleton and explain each point
p.5	SLT theory 媒体社会学习理论	Define modelling and vicarious reinforcement in exam-ready wording
p.6	SLT evidence 学习理论证据	Quote Bandura (1963), Williams (1986) and Comstock & Paik (1994) numbers
p.7	SLT evaluation 学习理论评价	Give three weaknesses with the numbers that back them
p.8	ASPD features 反社会人格障碍	List the characteristics and the under-15 diagnosis rule
p.9	ASPD evidence 人格障碍证据	Quote the twin-study and brain-imaging percentages
p.10	Three theories compared 三论对比	Place each theory on the nature-nurture line; write one comparative sentence
p.11	Checkpoint + exam practice 自测与真题	Textbook checkpoint 1-9 + real exam questions 2+2+2+8
p.12	Answer key + brain dump 答案与重写	Mark honestly, rewrite every wrong answer in full

Revision tracker 复习打卡

☐ p.2-3 SFP ☐ p.4 evaluation ☐ p.5-7 SLT ☐ p.8-9 ASPD ☐ p.10 compare ☐ p.11 exam

Crime vs Antisocial + SFP Theory

1 · Criminal vs antisocial 犯罪行为与反社会行为

	Criminal behaviour 犯罪行为	Antisocial behaviour 反社会行为
Definition	You _____ （break the law）.	Causes _____, alarm or distress to others, _____ （harassment · not in itself illegal）.
Examples	Theft, assault, fraud.	Excessive noise, intimidating others, hoax calls.
Consequence (UK)	_____ （Prosecution 起诉）.	An _____ listing what you cannot do. （ASBO 反社会行为令）

2 · SFP in four steps 自证预言四步过程

Write the four steps in order. 第一步已给，补齐后面三步：

1. A _____ expectation is believed about the person. （false 虚假的）
2. The person is _____ as that type of person. （labelled 被贴标签）
3. They are treated _____; behaviour inconsistent with the label is _____. （differently · ignored）
4. The person _____ the label and acts in line with it, so the prophecy comes _____. （internalises · true）

中文逻辑：四步记四个字（信贴待真）

一个虚假的期待被人**信**了，就变成**贴**在对方身上的标签；别人按标签**待**他（好的行为被忽视，只有符合标签的行为有回应）；最后他把标签内化，标签就弄**真**了。放到犯罪上：被叫「小混混」的人被正常圈子孤立，只有犯罪团伙接纳他，最后他用犯罪「兑现」了标签。

Warm-up 检查

Which theory treats criminality as **nurture** and which as **nature**? SFP = _____, ASPD = _____. （nurture 教养 · nature 天性）

Exam-style practice 实战一问

Describe what is meant by antisocial behaviour. (2 marks)

Skeleton: causes harassment, alarm or distress to others + not in itself breaking any law. Two clauses, one mark each.

1 · Rosenthal & Jacobson (1968) 教室里的期望

Aspect	Fill from memory 凭记忆填
Setting	An _____ setting in _____, USA. （academic · San Francisco）
Label	Some students were labelled academic _____ with great potential — but they were allocated _____, not by intelligence. （'bloomers' · randomly）
Measure	IQ measured at the _____ and end of _____ year(s). （start · one）
Finding	The bloomers' IQ rose _____ than the non-bloomers', because teachers' _____ changed how they treated them. （significantly higher · expectations）

2 · Jahoda (1954) 名字里的期望

Aspect	Fill from memory 凭记忆填
Group	The _____ people of _____, who name boys by birth day. （Ashanti · Ghana）
Expectations	Monday boys: _____; Wednesday boys: _____. （quiet and placid · aggressive and short-tempered）
Data source	_____ years of records at a local _____ court. （five · juvenile）
Finding	_____% of violent offences by Wednesday-born boys vs _____% by Monday-born boys. （22 · 6.9）

中文逻辑：两个研究各管一段

Rosenthal & Jacobson 证明「期望 → 待遇 → 表现改变」这条链，但场景是教室不是犯罪；Jahoda 把这条链接到了**真实的暴力犯罪记录**上，是 SFP 直接支持犯罪解释的唯一研究。考试问 *who found a link between violent offending and the day of the week they were born?*，答 Jahoda (1954)，数字 22% vs 6.9% 要能背。

Compare the two studies 两研究对比

	Rosenthal & Jacobson	Jahoda
Method	_____ in a school setting. （field experiment）	_____ of court records. （archival analysis）
Measure	_____ scores over a year. （IQ）	Records of _____ offences. （violent）
Direct link to crime?	_____ （No — education only）	_____ （Yes — juvenile court）

1 · The three-part skeleton 评价骨架

任何一题 *evaluate self-fulfilling prophecy*，先用这三条搭骨架，再按题干挑一条展开：

Skeleton	The point	Why it matters
① **Evidence thin 证据薄**	The only direct criminal evidence is _____; the rest is about _____ outcomes. （Jahoda · education/IQ）	Teachers' treatment of pupils may not match what police or courts do to labelled people.
② **Method blocked 方法受限**	Ethics forbid deliberately labelling children, so only a _____ can be shown, not _____. （correlation · causation）	Other variables could explain the link; causation stays an assumption.
③ **Scope narrow 视野窄**	It ignores _____ pressure, politics, _____ factors and social or economic circumstances. （peer · biological）	A complete explanation of crime needs SLT and ASPD too.

2 · The self-report problem 测量难题

SFP is by definition a _____ belief, so it is hard to measure: beliefs are studied with _____ measures, which rely on insight, self-disclosure and _____. （false · self-report · honesty）

Exam sentence starter 高分句式

"The theory is supported by Jahoda (1954), who found that boys expected to be aggressive were over-represented in violent crime records. However, this is correlational, and because it would be unethical to label children experimentally, causation cannot be established." 背会这一句，2 分 justify 题和 4 分评价题都能用。

Write it out 全句写作

Pick one skeleton point and write it as a full evaluation sentence (point + why):

1 · Key terms in exam wording 考试用语

Social learning theory: criminal behaviour results from _____ such behaviour from _____ it via the media or watching other people. （modelling · observing）

Vicarious reinforcement: learning through the _____ of _____ person's behaviour. （consequence · another）

Modelling: imitating a _____ that has been seen to be _____. （role model · rewarded）

2 · The chain of learning 学习链

补全链条（每空一词）：see the model act → see the act _____ → store it as a script → reproduce it when the situation fits, possibly _____ after seeing it. （rewarded · later）

中文逻辑：替代强化是核心词

孩子不用自己挨打才学会打人：他看到别人打人**被奖励**（赢得了比赛、被夸厉害），就等于自己被强化了一次。这叫**替代强化**。考试要写这个词的英文 *vicarious reinforcement*，define 题就背上面第一句原文。

3 · Nature-nurture position 立场定位

SLT is a _____-cognitive explanation: learning is social (what is watched) but the storage and reproduction happens inside the mind. It sits between SFP (pure environment) and ASPD (pure biology). （social）

Mini scenario 情境判断

A child sees an older student win praise for bullying, then bullies a classmate the next week. Name the two pieces:

Copying the seen act = _____; learning through another person's consequence = _____ reinforcement. （modelling · vicarious）

Quick check 快问

Give the SLT define wording in one full sentence: _____ （criminal behaviour results from modelling behaviour observed via the media or other people）

1 · Bandura, Ross & Ross (1963)

Children watched a video of adults behaving _____ towards a Bobo doll; they also watched a _____ version where the adult was dressed as a black cat. Children copied from _____. Limitation: long-term impact was not _____ up, so we cannot know whether antisocial behaviour developed beyond the _____ context. (aggressively · cartoon · both · followed · experimental)

2 · MacBeth Williams (1986) — natural experiment

Aspect	Fill 凭记忆填
Event	The _____ of television to a small community in British Columbia, Canada. (introduction)
Sample	_____ young people studied. (16)
Finding	After only _____ years of television, they were _____ as aggressive as two _____ groups from nearby communities. (two · twice · control)
Her own caution	Williams suggested the aggression was more likely from the increased value placed on _____ lifestyles than from programme violence. (materialistic)

3 · Comstock & Paik (1994) — meta-analysis

Meta-analysis of _____ studies: a _____ correlation between television violence viewed and aggressive behaviour, with an overall coefficient of _____. This is not particularly strong and is affected by _____ sample sizes, which make findings appear significant when they are not. (correlational · positive · +0.19 · large)

中文逻辑：三个证据三种强度

Bandura 是实验室证据（能控变量，但场景假）；Williams 是自然实验（有真实社区，但她自己都不认可是电视的功劳）；Comstock & Paik 是相关元分析（人数最多，但 +0.19 很弱，相关也定不了因果方向，可能是爱看暴力的孩子自己去挑暴力节目）。答题时按「实验室最强控变量、自然实验最真实、相关最弱」排序引用。

Numbers recall 数字速查

Williams sample = _____ young people; twice as aggressive after _____ years; Comstock & Paik coefficient = _____. (16 · two · +0.19)

1 · Three weaknesses to memorise 三个缺点

Point	The evidence	Why it matters
Weak correlation 相关弱	Comstock & Paik's overall coefficient is _____, affected by large samples. (+0.19)	A weak link cannot carry the whole explanation of criminality.
Direction unknown 因果不明	Correlations do not establish _____ or indicate the _____ of possible causality: aggressive children may seek out violent programmes. (causality · direction)	The third-variable problem applies: social class could drive both TV habits and aggression.
Alternative explanation 自己人也反水	Williams suggested her own result came from _____ lifestyles, not programme violence. (materialistic)	Even the key study's author offers a non-learning explanation.

2 · The Luca question method 8 分题方法

课本真题：Luca 玩暴力游戏赢了比赛，在家和学校都开始打架。Discuss how SLT could account for Luca becoming aggressive. 写法四句：

1. Name the mechanism: Luca saw fighting _____ (he wins competitions and is praised). (rewarded)
2. Use the key term: this is _____ reinforcement. (vicarious)
3. Chain the outcome: the script reproduces at home and school when the _____ fits. (situation)
4. Balance one line: this is correlational; Luca may already have been _____. (aggressive)

Exam-style practice 实战一问

What is meant by 'vicarious reinforcement'? (2 marks)

ASPD — Features and Diagnosis

1 · Definition 定义

Antisocial personality disorder is characterised by a persistent _____ for the _____ of others. (disregard · rights)

2 · Six characteristics 六特征（课本清单位置）

- Disregard for _____ rules or respect for _____ behaviour. (social · lawful)
- _____ and manipulation: lying, using aliases, conning others. (Deceit)
- _____ or failing to plan ahead. (Impulsivity)
- _____ and irritability, e.g. getting into fights. (Aggression)
- Reckless disregard for their own or other people's _____. (safety)
- Lack of _____ for wrongdoing or harm. (remorse)

3 · The under-15 rule 诊断年龄线

ASPD has its roots in childhood and cannot be formally diagnosed without evidence of antisocial behaviour before the age of _____ years. (15)

> **中文逻辑：先有行为后有诊断**
>
> 六特征口诀：违规骗人、好斗鲁莽、不冲动不后悔，各占一条。年龄线是考点：15 岁前必须已经有反社会行为记录，成年才能诊断。这意味着「disorder 导致犯罪」的说法只站得住一半，是先有行为证据才有 disorder。评价题里可以拿这条做加分点：诊断与行为互为前后，因果方向存疑。

Warm-up 检查

Demi steals money from her mother's purse. Which characteristic? _____. (disregard for social rules / lawful behaviour)

Behaviours to characteristics 行为配特征（课本 Activity 2）

- Tamara screams aggressively at the neighbours — _____ (aggression and irritability)
- Sanya plays music loudly and insults people — _____ (disregard for social rules)
- Demi steals money from her mother's purse — _____ (disregard for lawful behaviour)
- Ruhie lies to his teachers — _____ (deceit and manipulation)
- Lola regularly fails to show up for work — _____ (impulsivity / failing to plan ahead)

ASPD Evidence — Twins and Brains

1 · Twin and adoption studies 双胞胎与收养研究

Study	Numbers to memorise 要背的数字
Torgersen et al. (2008)	_____ twin pairs in a Norwegian sample; genetic heritability accounted for _____% of twin diagnosed with antisocial personality traits. （1386 · 38）
Mason & Frick (1994)	Described _____ twin and _____ adoption studies; _____% of the variance in antisocial behaviour attributable to genetic factors. （12 · 3 · 50）
Fergusen (2010)	Meta-analysis of _____ studies (1996-2006), combined sample of _____; genetic factors accounted for _____% of the variance. （38 · 96 918 · 56）
Hodgins & Côtè (1993)	Offenders _____ ASPD had a significant history of offending in _____ and more _____ in adulthood than offenders without ASPD. （with · childhood · convictions）
Simonoff et al. (2004)	Interviewed _____ childhood twin pairs with _____ disorder; it predicted ASPD in adulthood in those with criminal behaviour _____ years later. （225 · conduct · 10-25）

2 · Brain imaging 脑成像

Yang & Raine (2009): meta-analysis of _____ brain scan studies; found significantly reduced _____ matter and reduced function in the _____ cortex, which is known to _____ aggression. Impairment could be inherited or _____ through brain damage. Other differences: the _____ and temporal lobe. （43 · grey · prefrontal · moderate · acquired · amygdala）

中文逻辑：数字按「38 → 50 → 56」递增背

三项遗传研究给出 38%、50%、56% 三条数字线，越新越大，方向一致都指向遗传基础。Yang & Raine 补上脑机制（前额叶管情绪刹车）。评价时记得：所有这些都是相关证据，脑差异可能是犯罪的结果而不是原因，课本原话「inherited or acquired」留的就是这个口子。

Numbers recall 数字速查

Torgersen _____ twin pairs → _____%; Mason & Frick _____%; Fergusen sample _____ → _____%; Yang & Raine _____ scans. （1386 · 38 · 50 · 96 918 · 56 · 43）

Three Theories Compared

1 · One-line comparison 一表定位

	SFP 自证预言	SLT from media 媒体学习	ASPD 人格障碍
Layer 层面	Social: treatment by others	Social-cognitive: observed models	Biological: the individual's disorder
Key mechanism	A false _____ internalised. (label)	_____ reinforcement. (Vicarious)	Persistent disregard for others' _____. (rights)
Best evidence	_____ (1954), 22% vs 6.9%. (Jahoda)	Bandura (1963); Williams (1986); Comstock & Paik (_____). (1994)	Fergusen (2010) _____ %; Yang & Raine _____ scans. (56 · 43)
Weakest point	Only correlational; ethics block experiments	Weak + _____ coefficient; direction unknown. (0.19)	Comorbidity and the under-_____ rule blur cause and effect. (15)
Nature-nurture	_____ (nurture)	Mostly _____ (nurture)	_____ (nature)

2 · Comparative sentence 写一句对比

Write one sentence that places SFP and ASPD on opposite sides and names what a complete explanation needs:

Model sentence 参考句

"SFP explains criminality through social treatment (nurture), while ASPD locates the cause inside the individual (nature); a complete explanation needs both, since twin and brain evidence shows a genetic basis while Jahoda's day-name study shows expectations shaping real offending."

Synthesis questions 综合问答

1. Why can SLT and ASPD be combined in one explanation of a repeat offender? _____ (learning supplies the behaviour; ASPD traits supply impulsivity and low remorse)

2. Which theory best explains a first offence under peer pressure, and why? _____ (SFP/SLT — social expectations and observed models drive it)

1 · Textbook checkpoint 课本自测 1-9

1. Name the two SFP studies and what each measured: _____ (R&J: IQ change · Jahoda: violent offences)
2. Give a brief finding for each, one or two sentences: _____ (bloomers' IQ rose · Wednesday boys 22% vs 6.9%)
3. Name three characteristics of ASPD: _____ (any three of the six)
4. Name two sources of aggression children learn antisocial behaviour from: _____ (media / other people)
5. Who linked violent offending to the day of the week born? _____ (Jahoda (1954))
6. Describe antisocial behaviour: _____ (causes harassment, alarm or distress; not itself illegal)
7. Why can SFP-caused antisocial behaviour not be tested experimentally? _____ (unethical to label children deliberately)
8. What is vicarious reinforcement? _____ (learning through another person's behaviour consequence)
9. How does it explain aggression? _____ (seeing aggression rewarded strengthens copying)

2 · Exam practice 真题（课本 EXAM PRACTICE 原题）

1. (a) Describe antisocial personality disorder (ASPD) as an explanation of criminal and antisocial behaviour. (2 marks)

1. (b) Justify how ASPD can be considered a credible explanation of criminal and antisocial behaviour. (2 marks)

2. Justify self-fulfilling prophecy as an explanation for crime and antisocial behaviour. (2 marks)

3. Luca enjoys playing violent video games and has won a competition. His parents notice he is more aggressive at home and gets into trouble at school. Discuss how social learning theory could account for Luca becoming aggressive. (8 marks)

Answer Key + Brain Dump

Answer key 答案速查

p.2 break the law · harassment · not in itself illegal · Prosecution · ASBO · false · labelled · differently · ignored · internalises · true · nurture · nature.
p.3 academic · San Francisco · 'bloomers' · randomly · start · one · significantly higher · expectations · Ashanti · Ghana · quiet and placid · aggressive and short-tempered · five · juvenile · 22 · 6.9.
p.4 Jahoda · education/IQ · correlation · causation · peer · biological · false · self-report · honesty.
p.5 modelling · observing · consequence · another · role model · rewarded · rewarded · later · social.
p.6 aggressively · cartoon · both · followed · experimental · introduction · 16 · two · twice · control · materialistic · correlational · positive · +0.19 · large.
p.7 +0.19 · causality · direction · materialistic · rewarded · vicarious · situation · aggressive.
p.8 disregard · rights · social · lawful · Deceit · Impulsivity · Aggression · safety · remorse · 15 · disregard for social rules or lawful behaviour.
p.9 1386 · 38 · 12 · 3 · 50 · 38 · 96 918 · 56 · with · childhood · convictions · 225 · conduct · 10-25 · 43 · grey · prefrontal · moderate · acquired · amygdala.
p.10 label · Vicarious · 1994 · Jahoda · 56 · 43 · 0.19 · 15 · nurture · nurture · nature.

Model answer highlights 高分要点

Q1a+1b ASPD 2+2 骨架

Describe: a persistent disregard for the rights of others, diagnosed only with evidence of antisocial behaviour before age 15; features include deceitfulness, impulsivity, aggression and lack of remorse. Justify credibility: twin studies (Torgersen 38%, Fergusen 56% of variance) and brain scans (Yang & Raine, reduced prefrontal function) give a measurable biological basis, and Simonoff (2004) shows childhood conduct disorder predicting adult ASPD.

Q3 Luca 8 分骨架

1. Mechanism: Luca watches violent games where fighting is rewarded (prizes, praise). 2. Key term: vicarious reinforcement - seeing the model's aggression succeed strengthens his own aggressive scripts. 3. Application: the scripts reproduce at home (fights with his brother) and at school (playground) when the situation fits. 4. Balance: this evidence is correlational; Luca may have been more aggressive before gaming, and the theory cannot prove direction.

Brain dump 空白重写

Rewrite, from memory and in full, any answer you got wrong or left blank above:
