How to use this workbook 使用方法

Cover the answer hints, write your own answer first, then check.每一节先自己写，再对括号里的提示。答案速查在最后一页。做错的内容标星，考前只看标星部分。

Contents map 内容地图

Page	Section	What you must be able to do
p.2	CI purpose + two principles 认知访谈原理	State what the CI is for and the two memory principles behind it
p.3	Four techniques 四技术	Name all four with one application example each
p.4	Enhanced CI 增强版	State what it adds and who leads it
p.5	CI evidence 认知访谈证据	Quote Geiselman (1985), Fisher (1989), Memon (1997) numbers
p.6	CI evaluation 认知访谈评价	Two strengths, two weaknesses, each linked to evidence
p.7	Formulation phase 1: offence analysis 个案概念化阶段一	Define contingencies and criminogenic factors
p.8	Formulation phase 2 + definition 阶段二与定义	Write the key term definition and name the six factor groups
p.9	Formulation evaluation 概念化评价	Two strengths, two weaknesses with reasons
p.10	Checkpoint 自测	Key terms, matching, short answers
p.11	Exam practice 真题	Olivia/Rhys 8+4, Darian 3 — with writing lines
p.12	Answer key + brain dump 答案与重写	Mark honestly, rewrite every wrong answer in full

Revision tracker 复习打卡

☐ p.2-4 CI theory ☐ p.5-6 CI evidence + evaluation ☐ p.7-9 formulation ☐ p.10-11 exam

Cognitive Interview — Purpose and Principles

1 · What it is 它是什么

The cognitive interview (Fisher and Geiselman, _____) is a specific way of asking _____ designed to help witnesses recall _____ information without the interviewer _____ them. （1984 · questions · accurate · suggesting to）

2 · The two memory principles it rests on 两条记忆原理

Principle	Theory	Which technique uses it
Bartlett (1932) 重构记忆	Memory _____ the event: _____ fill the gaps. （rebuilds · schemas）	change order, change _____ （perspective）
Tulving (1974) 线索记忆	Sights, sounds, smells and feelings are _____ with the event; reinstating context and state act as _____ cues. （encoded · retrieval）	reinstate _____, report _____ （context · everything）

中文逻辑：四技术是两原理各配一对

Bartlett 说记忆是重建的，会拿现成的「剧本」（图式）填空，所以换顺序、换视角能打断剧本，让人不瞎编；Tulving 说记忆靠线索取回，所以还原情境、什么都说能多给几条线索。考试问「explain how the CI is based on memory research」，就把这两对配着写。

Warm-up 检查

Who are the two names attached to the cognitive interview itself? _____ （Fisher and Geiselman）

Why the CI exists 设计动机

Standard interviews risk _____ questions that hint at the desired answer. The CI instead uses _____ questions and encourages _____ recall. （leading · open · free）

Quick check 快问

Why is "report everything" paired with Tulving's cue theory? _____ （a trivial detail can act as the cue that unlocks key facts）

The Four Techniques 四技术

Four techniques with applications 四技术与应用例

Technique	What the interviewer does	One-line application 应用
1 · Reinstate the context	Mentally relive the scene: _____, smells, _____, feelings. （weather · time of day）	"Close your eyes; put yourself back at the bus stop."
2 · Report everything	Free recall without _____; include trivial or _____ bits. （interruption · unrelated）	"Even if it seems unimportant, tell me everything."
3 · Change the order	Recall in _____ or a different sequence. （reverse）	"Tell me what happened starting from the end."
4 · Change perspective	View the scene from another _____ or a _____ character. （witness · prominent）	"Describe it as the shopkeeper would have seen it."

中文逻辑：每题只写名字 + 一句应用

8 分题（Olivia/Rhys）的写法是四个技术各一段：先写技术名，再写一句怎么用在 Rhys 身上（比如 change order 就写「让 Rhys 从保安追出来那刻倒着讲」）。只列四个名字不展开应用，8 分只能拿一半。

Self-check 自测

Which technique would you use first, and why? _____ （reinstate the context — it provides retrieval cues before free recall）

Write your own applications 自己写应用句

Rhys scenario: a woman ran out of a department store, chased by a security guard. Write one application sentence per technique, as in the 8-mark answer:

1 Reinstate context: _____

2 Report everything: _____

3 Change order: _____

4 Change perspective: _____

Enhanced Cognitive Interview

1 · What it adds 增强版加了什么

The enhanced cognitive interview (Fisher and Geiselman, _____) uses the _____ techniques as the CI, but incorporates _____ techniques. (1992 · same · more)

2 · Main aim and features 主要目标与特点

- Main aim: support the witness through _____ the event and ask questions appropriate to the witness's _____ level while minimising _____. (reliving · intellectual · distractions)
- First phase: establish a _____ connection with the witness before they report everything. (personal)
- Questions are _____ questions, suitable to the witness's social and cultural _____. (open · background)
- Approach: witness _____, not controlled by the interviewer — but requires significant training in _____ skills. (led · interpersonal)

中文逻辑：CI vs enhanced CI 一句话分清

CI 管的是「问什么」(四技术)，enhanced CI 管的是「怎么问」(先建立关系、按对方的理解水平问开放式问题、少打断)。写评价时可以拿这个当 strength：enhanced 版对小孩和文化背景不同的证人更友好。

Self-check 自测

Which version should a police officer use with a young child, and why? _____ (enhanced CI — questions fit the child's intellectual level, witness-led)

CI vs enhanced CI 对比表

	CI	Enhanced CI
Techniques	The _____ four. (same)	Same four _____ more. (plus)
First step	Techniques begin at once.	Build a _____ connection first. (personal)
Who leads	Interviewer asks the four.	Witness _____. (led)
Training need	Technique training.	Significant training in _____ skills. (interpersonal)

CI Evidence — Three Studies

1 · Geiselman et al. (1985) 实验室对比

Aspect	Fill 凭记忆填
Sample	_____ undergraduate students from the University of _____. （89 · California）
Material	A film of a violent crime lasting about _____ minutes. （four）
Comparison	CI vs a _____ interview technique vs an interview under _____, with _____ interviewers. （standard · hypnosis · 17）

2 · Fisher et al. (1989) 真实犯罪现场

After training, detectives gained as much as _____% more useful information from witnesses to _____ crimes compared to _____ officers. （47 · real · untrained）

3 · Memon et al. (1997) 泼冷水的一篇

Participants recalled _____ information about a short clip of a shooting, but also made _____ errors in recall and _____ details. （more · more · confabulated）

中文逻辑：三个研究三个用途

写 strength 用 Fisher 1989（47%，真实犯罪，生态效度好）；写 weakness 用 Memon 1997（信息多了但错误和虚构也多了）；实验室原始证据用 Geiselman 1985。三个都要能背数字，评价题就是拿这些数字互相制衡。

Numbers recall 数字速查

Geiselman: _____ students, film about _____ minutes, _____ interviewers; Fisher: _____%. （89 · four · 17 · 47）

Quick check 快问

Which CI study used real witnesses and which used a film? _____ （Fisher: real crimes · Geiselman: four-minute film）

1 · Two strengths, two weaknesses 两强两弱

Side	Point	Evidence backing it
Strength	Works with _____ crimes, not just labs. (real)	Fisher et al. (1989): _____% more information. (47)
Strength	Grounded in _____ research (Bartlett, Tulving), so each technique has a mechanism. (memory)	Context reinstatement maps onto Tulving's _____ cues. (retrieval)
Weakness	More recall comes with more _____: Memon (1997) found more errors and _____ details. (errors · confabulated)	Quantity gained may cost accuracy.
Weakness	Not all four components may be _____; young children find _____ perspective hard. (required · changing)	Further research is needed on which component carries the success.

2 · Science debate 科学性之争

Laboratory research on eyewitness testimony is controlled but artificial; the CI's real-crime evidence is ecologically _____ but less tightly controlled. A balanced answer names both sides. (valid)

Exam sentence starter 高分句式（Olivia 1b 用）

Strength: "Fisher et al. (1989) found detectives gained 47% more information after CI training, so Olivia can expect more complete recall from Rhys." Weakness: "Memon et al. (1997) showed increased recall can include confabulated details, so information Rhys gives under the CI must be checked before it is relied on."

Write it out 全句写作

Write one weakness as a full sentence with the study attached:

Formulation Phase 1 — Offence Analysis

1 · Key terms 术语

Contingencies: _____ factors associated with a _____ offence. (common · specific)

Criminogenic factors: factors associated with the _____ that _____ to the criminal behaviour. (individual · contributed)

Psychological (case) formulation: an analysis of a convicted offender by looking at their _____, biological and social circumstances, _____ events, and how they have _____ the events that happened to them. (relationships · life · interpreted)

2 · Two jobs in phase 1 阶段一两件事

1. Compare _____ offences committed by different offenders to find patterns and commonalities that reveal _____. (similar · motives)
2. Interview the offender to identify _____ factors — the social and psychological factors that _____ to their criminal behaviour. (criminogenic · contributed)

> **中文逻辑：先横向比案，再纵向问人**
>
> 阶段一是两步：横着比（找同类型案件里的共同因素，比如盗窃案的 contingencies 常是经济困难或药物滥用），竖着问（问这个人本人的 criminogenic factors）。两步合起来回答一个问题：这次犯罪对他起了什么作用（function）。Darian 3 分题就按这个顺序写。

Worked contingencies 例子填空

Contingencies for theft can be financial _____ or _____ abuse. (difficulties · substance)

Give one plausible contingency for assault in a pub: _____ (e.g. alcohol consumption)

Quick check 快问

Why compare similar offences before interviewing the offender? _____ (patterns and commonalities give insight into the offender's motives)

1 · Six factor groups 六组因素

Fill the six groups of criminogenic factors the psychologist considers（来自课本 Figure 8.1 与正文）：

_____ traits · mental _____ issues · past _____ · family _____ · emotional _____ · socioeconomic _____.（personality · health · experiences · background · state · status）

2 · How the formulation is written 怎么成文

The formulation explains how the factors _____ the offence: which _____ were present in the situation, what _____ beliefs drove the behaviour, and how early _____ (for example being bullied) connect to the present act.（produced · triggers · core · experiences）

中文逻辑：概念化是「解释链」不是「标签」

成品的读法：餐馆打人案里，拥挤的环境是 trigger，他小时候被欺负的记忆被唤起，核心信念「不能被人占便宜」被激活，于是用暴力处理冲突。考试写 formulation 就是把「因素 → 触发 → 信念 → 行为」这条链写完整，只罗列因素不写链，分拿不满。

3 · Risk and intervention 用途

Identifying these factors helps assess the offender's risk of _____ and develop _____ to help offenders break the cycle of offending.（reoffending · interventions）

Chain writing 链条排序

Order the restaurant case from first to last: core beliefs activated · triggers present (crowded place) · memory of being bullied · violent response

Your order: _____ → _____ → _____ → _____.（triggers present · memory of being bullied · core beliefs · violent response）

Quick check 快问

Name two things identifying criminogenic factors is used for: _____（assessing reoffending risk · developing interventions）

6. Why must a formulation be revised over time? _____（it is a snapshot; circumstances change and new information appears）

Formulation Evaluation

1 · Two strengths, two weaknesses 两强两弱

Side	Point	Why it matters
Strength	_____ agency working: forensic psychologists, police and _____ staff pool information. (Multi · probation)	The book calls it the best way to decide management and rehabilitation plans.
Strength	Individualised: treats the offender as a _____ case, not a type. (single)	Explains the function of THIS offence for THIS person, which labels cannot.
Weakness	Draws on the offender's own _____ about the past — retrospective _____ is unreliable, and the psychologist's reading may carry _____. (memories · data · bias)	Two layers of distortion sit between the facts and the formulation.
Weakness	Hard to verify: reoffending rates as the measuring stick are inaccurate (missed reoffending), and a formulation is a _____ that goes stale as circumstances change. (snapshot)	Effectiveness of the resulting intervention is difficult to measure.

Essay sentence starter 高分句式

"Formulation is useful because it explains the function of this offence for this offender and draws on multiple agencies, but its data are retrospective self-report filtered through the psychologist's interpretation, so conclusions should be revised as new information emerges."

Write it out 全句写作

Write the essay starter from memory (formulation usefulness + limitation):

1 · Key terms quick fire 术语快答

1. Who developed the cognitive interview (1984)? _____ (Fisher and Geiselman)
2. Which technique is "recall in reverse or a different sequence"? _____ (change the order)
3. Which memory researcher backs context reinstatement? _____ (Tulving (1974))
4. Which memory researcher backs changing order and perspective? _____ (Bartlett (1932))
5. Common factors associated with a specific offence are called? _____ (contingencies)
6. Factors of the individual that contributed to the crime are called? _____ (criminogenic factors)
7. The two phases of formulation work are? _____ (offence analysis · the case formulation itself)
8. Fisher et al. (1989) percentage? _____ (47% more information)
9. Memon et al. (1997) downside? _____ (more errors and confabulated details)
0. Whose theory says memory rebuilds events and schemas fill gaps? _____ (Bartlett (1932))

2 · Match technique to scenario 场景配技术

Match each interviewer line to technique 1-4:

- "Describe the scene as the victim standing behind the counter saw it." — _____ (4 change perspective)
- "Start from when the man ran out, then work backwards." — _____ (3 change the order)
- "What sounds, smells and lighting were there when you arrived?" — _____ (1 reinstate the context)
- "Tell me everything, even the details that feel pointless." — _____ (2 report everything)

3 · One-sentence answers 一句话简答

Why does changing the order help recall? _____ (interrupts schema activation and stops story formation)

Why can contingencies mislead the analyst? _____ (many factors are associated with specific offences, so patterns may be coincidental)

Textbook EXAM PRACTICE 原题

1. Olivia is a newly trained police officer. She must interview Rhys, who witnessed a theft from a department store (he saw a woman running out, chased by a security guard). (a) Discuss how Olivia could use cognitive interview techniques to help Rhys recall the incident. (8 marks)

(b) Explain one strength and one weakness of Olivia using a cognitive interview with Rhys. (4 marks)

2. Darian works in a local prison and must carry out a case formulation on a prisoner being considered for release (not engaging in treatment; neglected as a child; unstable relationships; addiction; was homeless before prison). Explain how Darian may conduct a psychological formulation to understand the function of the offending behaviour. (3 marks)

Answer key 答案速查

p.2 1984 · questions · accurate · suggesting to · rebuilds · schemas · perspective · encoded · retrieval · context · everything · Fisher and Geiselman.
p.3 weather · time of day · interruption · unrelated · reverse · witness · prominent · reinstate the context.
p.4 1992 · same · more · reliving · intellectual · distractions · personal · open · background · led · interpersonal · enhanced CI.
p.5 89 · California · four · standard · hypnosis · 17 · 47 · real · untrained · more · more · confabulated.
p.6 real · 47 · memory · retrieval · errors · confabulated · required · changing · valid.
p.7 common · specific · individual · contributed · relationships · life · interpreted · similar · motives · criminogenic · contributed.
p.8 personality · health · experiences · background · state · status · produced · triggers · core · experiences · reoffending · interventions.
p.9 Multi · probation · single · memories · data · bias · snapshot.
p.10 Fisher and Geiselman · change the order · Tulving · Bartlett · contingencies · criminogenic factors · offence analysis and case formulation · 47% · more errors and confabulated details · Bartlett · 4 · 3 · 1 · 2 · interrupts schema activation · many factors, patterns may be coincidental.

Model answer highlights 高分要点

Q1a Olivia 8 分骨架

Four paragraphs, one per technique, each: name the technique + apply to Rhys. 1. Reinstate the context: have Rhys mentally return to the store (weather, sounds, how he felt). 2. Report everything: uninterrupted free recall, even trivial details, since a small detail may cue the key facts. 3. Change the order: recall from the security guard chasing outwards backwards, to interrupt schema-based guessing. 4. Change perspective: describe events as the shopkeeper or guard saw them. Close with: open questions, no leading questions, witness-led.

Q1b + Q2 骨架

1b: Strength - Fisher et al. (1989), 47% more information, so more complete recall from Rhys. Weakness - Memon et al. (1997), more recall can bring confabulated details, so answers need verification. Q2 (3 marks): 1. Offence analysis: compare this offence with similar offences to identify contingencies. 2. Interview the prisoner to collect criminogenic factors (neglect, unstable relationships, addiction, homelessness). 3. Build the formulation: link the factors into a chain showing the function the offending served, then use it to plan treatment and assess reoffending risk.

Brain dump 空白重写

Rewrite, from memory and in full, any answer you got wrong or left blank above:
