Chapter 8 — Cognitive Interview & Psychological (Case) Formulation

Student Notes Workbook · 学习笔记工作册

From eyewitness recall to understanding the offender · 从证人回忆到理解罪犯

Name 姓名: _____ Class 班级: _____ Start date: _____

How to use this workbook 使用方法

1. **Read one section** of the courseware, then fill in the matching workbook page. 边读课件边填空。
2. **The numbers & names are gold.** Every theory page asks for the key studies (Geiselman 41.15/29.40 · Köhnken 42 studies · Holliday ages 5-10/11+) and definitions — examiners reward them. 数字和命名研究是采分点。
3. **Check answers** on the last page and tick the tracker below. 对答案并打卡。每页右上角标有对应课件章节。

Syllabus map — what the exam can ask 大纲考点 (spec 6.1.2 + 6.1.3)

Syllabus	Content 内容	Workbook pages
Theory 1 (CI)	CI Cognitive interview — four techniques + Geiselman (1985)	pp. 3–6
Evidence	EVID Geiselman · Fisher (1989) · Köhnken (1999) meta · Holliday (2003)	p. 6
Theory 2 (Formulation)	FORM Case formulation — gathering, theory, function, decisions	pp. 7–9
Compare	CI vs Formulation — when each is used, who uses it	p. 9
Exam skills	Define (AO1) · Justify with named study (AO3) · 8-mark application essay (AO2/AO3) · 4-mark strengths/weaknesses	p. 11
Self-test	Brain dump from memory · sentence patterns · answer key	pp. 13–14

Exam format 考试形式: Paper 3 Section B — **8-mark "discuss how Olivia could use…" questions** need four CI techniques each linked to a foundation; **3-mark "explain how Darian may conduct a formulation"** needs gathering + interpretation + function + decision. Generic answers score low marks.

Review tracker 复习打卡

- ☐ First pass — all blanks filled 第一遍填完 Date: _____

Warm-up — You Are the Officer · 开局热身

ANSWERS → 课件 §2

The one-line map of the chapter 全章地图

This chapter runs in **two stages**: stage 1 (CI cognitive interview) helps *witnesses* remember a crime; stage 2 (FORM psychological formulation) helps *the system* understand a caught offender. Memorise: **CI = before trial** (police interviewing a witness) · **Formulation = after conviction** (psychologist understanding an offender in prison).

Getting Started — write your seven questions 开局思考

课本 The City Bank robbery 原文：a group of masked individuals stormed the City Bank in a daring bank robbery ... the menacing robbers herded the customers and staff to the back ... the criminals left swiftly. Read the extract again on the courseware, then write down **seven questions** you would ask the witnesses as a police officer.

#	Your seven questions · 你的 7 问
1.	
2.	
3.	
4.	
5.	
6.	
7.	

Self-check before moving on 自检（写完 7 问再走）

- ☐ My 7 questions are **open**（e.g. "Tell me everything you saw"）rather than yes/no（e.g. "Did she wear a mask?"）
- ☐ None of my questions **lead** the witness（e.g. "Didn't she run towards the door?"）— I haven't pre-loaded the answer
- ☐ I have **not asked** the witness to *guess why* the offenders did it — only *what they did*

Why this matters for the exam · 考试为什么考这个

The whole chapter's **8-mark exam question** (Olivia & Rhys) tests exactly this: take a standard question a junior officer might ask and rewrite it as a CI-friendly one. Your 7 questions here become your starting point for §6 Activity 1.

CI The two memory foundations · 两大记忆原理

ANSWERS → 课件 §3

The chapter's hinge 章节枢纽

The cognitive interview wasn't invented by accident. It is built on **two cognitive theories** about how memory works — and understanding those two theories is what makes the four techniques make sense (rather than feel like four arbitrary tricks). Memorise these two foundations before reading §4.

Foundation 1 — Bartlett (1932) reconstructive memory · 重构记忆

What does it claim?	Memory is _____（not a recording 不是录像）, but an active _____（re-building 重新构建）. When we recall, we **fill in gaps** using our _____（schemas 图式）— pre-existing expectations about how the world works.
Key study	Bartlett (1932) — "War of the Ghosts" story. Participants _____（mis-remembered 误记） details to fit their own culture (e.g. "canoe" → _____（boat 船)).
Witness risk	A witness's recall may be **contaminated** by what _____（they expect to have seen 他们期待看到的）, not what they actually saw.
Interview fix	Break the witness out of _____（story mode 故事模式） — reverse the order, change perspective → prevents schema from filling in details.

Foundation 2 — Tulving (1974) context-dependent memory · 情境依赖记忆

What does it claim?	Memory is best retrieved in the _____（same context 同等情境） in which it was encoded. Mood, surroundings, sounds, and _____（weather 天气） at encoding act as retrieval cues.
Key study	Godden & Baddeley (1975) — divers recalled words **better on land if learned on land** and **better underwater if learned underwater** (the textbook uses Tulving's principle; Godden & Baddeley is the most cited test).
Witness risk	A witness is being interviewed in a _____（quiet police station 安静的警局） — nothing like the noisy, chaotic crime scene. Cues are gone, retrieval **drops**.
Interview fix	Ask the witness to **mentally rebuild** the original scene — what they could see, hear, smell, how they _____（felt 感受） at the time. Cue the context back.

Exam tip · 自己回答"designed from which two theories?"

The Checkpoint answer is **exactly**: *Bartlett's (1932) reconstructive memory theory and Tulving's (1974) context-dependent memory.* Don't say "Loftus & Palmer" (that's misleading questions — tested elsewhere) and don't say "Godden & Baddeley" (it tested Tulving but isn't the theory itself).

CI The four techniques of the cognitive interview

ANSWERS → 课件 §4

Fill in the four techniques — what they do and *why* 对抗哪个记忆毛病

Technique 技巧	What the officer does 警官做什么	Fights which foundation problem 对抗哪个毛病
1. Report everything *报告一切*	Let the witness give a _____ (free / uninterrupted 自由 / 不打断) account. Even trivial details ("the man had a red shoelace") can act as _____ (memory cues 记忆线索).	Fights _____ (Bartlett's 巴图效应) — by saying "report everything" you **invite more raw detail** that the schema would otherwise skip.
2. Reinstate the context / mental state *重建情境与心境*	Ask the witness to _____ (mentally rebuild 心理重建) the crime scene — sights, sounds, smells, weather, how they felt.	Fights _____ (Tulving's 塔文宁效应) — restores the **encoding context** so retrieval cues come back.
3. Change the order *改变顺序*	Ask the witness to recall the event _____ (backwards / in a different sequence 倒序或换序) — start from the end, then work backwards.	Fights _____ (Bartlett's 巴图效应) — breaks **story mode**; the schema can't "fill in" because the narrative is rearranged.
4. Change the perspective *改变视角*	Ask the witness to report the event from _____ (another person's standpoint 另一个人的视角) — e.g. the security guard's, the cashier's.	Fights _____ (Bartlett's 巴图效应) — forces a **different retrieval route**, recalling details normally filtered out by the witness's own view.

Apply it · 立刻应用（用课本 The City Bank robbery）

Take your Q1 from page 2. Which foundation problem does it most likely trigger? Rewrite it using ONE of the four techniques above.

Your original Q1: _____

Risk it triggers: _____

CI rewrite + which technique:

Sentence pattern for AO2 application · 考试动笔句型

"*Olivia should **[TECHNIQUE]** by asking Rhys to **[WHAT HE IS BY]**, because **[WHY IT FIGHTS THE PROBLEM]** (Bartlett / Tulving).*" — every one of the 4 marks in the 8-mark essay should follow this shape.

CI Interview flow & Geiselman (1985) · 访谈流程与关键证据

ANSWERS → 课件 §5–§6

§5 — The 5-step interview flow · 访谈五步流程

Step	What happens	Why it matters
1.	Transfer the rapport from the first officer to the interviewer. 把关系从第一位警员交接给访谈官。	_____ (witness feels safe 证人感到安全)
2.	_____ (open question / free recall 开放问题 / 自由回忆) — let the witness tell their story without interruption.	_____ (the cues & raw detail come out 线索和原始细节浮出)
3.	Apply the four CI techniques (page 4) in turn.	_____ (each targets a foundation problem 每个技巧针对一个原理)
4.	_____ (specific questions / follow-ups 具体追问) — based on what the witness already said.	_____ (probe the gaps 填补空白)
5.	Return the witness to a normal emotional state before leaving.	_____ (ethical duty / avoid re-traumatisation 避免二次创伤)

§6 — Geiselman et al. (1985): the headline numbers · 关键数字

	Standard interview 标准访谈	Cognitive interview 认知访谈
Correct items recalled 正确回忆	_____ (29.40)	_____ (41.15)
Confabulations 编造细节数	about the same for both — no more false memories in the CI group.	about the same — CI doesn't increase errors.
What this proves · 证明什么	CI retrieves **more** correct detail from witnesses **without** inventing more errors. The extra items are *real*, not _____ (guesses 猜测).	

Number-memorisation hint · 数字背诵技巧

Examiners reward the two numbers **41.15** (CI) and **29.40** (standard). Write them as "CI ≈ 41 vs standard ≈ 29" if memory fails — the comparison is what scores, not the decimal. Remember also: **errors are roughly equal**, so the gain isn't from making things up.

§7 — Four pieces of evidence · 四项证据（必背）

Study 研究	Design & sample 设计/样本	Finding 结果
Geiselman et al. (1985)	Lab study, _____（detectives / students 侦探 / 学生） watched a video of a crime, recalled 1 day later.	CI: _____ correct items vs standard: _____. Confabulations _____（roughly equal 大致相同）.
Fisher et al. (1989)	Field study — _____（real crimes 真实案件） in Florida, USA.	Real detectives using CI recovered **+47%** more correct info than standard.
Köhnken et al. (1999)	Meta-analysis of _____ studies.	CI reliably _____（outperforms 胜过） standard across many contexts — but the size of the gain varies.
Holliday (2003)	Field study on **child** witnesses, ages _____（5–10） vs _____（11+）.	CI works well for **older children (11+)**, but only modest gains for younger ones.

§8 — Evaluating the CI · 评价（三段：strength + evidence + why it matters）

Point 评价点	Evidence 证据	Why it matters 为什么重要
Strength 1 — more accurate recall	_____（Geiselman 1985）: 41.15 vs 29.40 correct.	Witness testimony is the most common form of evidence in court; CI makes it _____（more reliable 更可靠）.
Strength 2 — works in real field settings	_____（Fisher 1989）: +47% in real crimes.	Lab results _____（generalise 推广） to real policing — supports ecological validity.
Limitation 1 — time-consuming	CI typically takes _____（~ 60 min） vs 15 min for standard.	Officers under time pressure in active investigations may not be able to _____（apply the full protocol 跑完完整流程）.
Limitation 2 — training demands	Dando et al. (2008): 221 officers reported feeling _____（inadequately trained 训练不足）.	Poorly applied CI can still mislead witnesses — _____（applicability depends on training 应用取决于训练）.
Limitation 3 — limited for young children	_____（Holliday 2003）: only modest gains under age 11.	CI is not a one-size-fits-all tool — children below ~11 may need other methods.

AO3 essay pattern · 评价写作句型

"*One strength is that **[point]**, as shown by **[named study]**, which found that **[numbers]**. This matters because **[real-world consequence]**.*" — always name the study, always use the number, always finish with the "so what".

FORM What is formulation? · 什么是心理/个案概念化

ANSWERS → 课件 §10–§11

§10 — Case formulation: definition & purpose 定义与目的

One-line definition	A psychological formulation is the process by which a psychologist _____ (gathers information 收集信息) about an offender's life (relationships, social circumstances, life events) and then _____ (applies psychological theory 应用心理学理论) to form a _____ (hypothesis 假设) about the **function** of their offending.
When it happens	**After** an offender is caught and convicted. It is _____ (not 不用于) used to catch the offender — that's the police's job, using the CI and other clues.
Who does it	A qualified _____ (forensic psychologist 司法心理学家) (often in prison or community probation), not a police officer.
What it informs	_____ (risk of reoffending 再犯风险) · appropriate _____ (rehabilitation programme 康复方案) · safe release planning · explaining the offending to the offender themselves (first step toward change).

§11 — Offence analysis · 罪行分析 (different from formulation)

	Offence analysis 罪行分析	Case formulation 个案概念化
What it studies	The **facts of the crime** 案件事实本身 — what happened, where, when, how, who was killed/harmed.	The **person who did it** 罪犯本人 — their life, relationships, beliefs, what the offence *functioned* for.
Used for	Investigating similar cases, linking crimes.	Treatment, risk assessment, release decisions.
Done by	Police / investigators.	_____ (forensic psychologist 司法心理学家).
Is it objective?	Closer to objective — describing _____ (events 事件).	_____ (Subjective 主观) — involves the psychologist's **interpretation** and theory choice.

The form of a formulation · 概念化的结构

A good formulation connects three layers: ① **triggers / antecedents** (what was happening just before) → ② **function** (what need the offending met: control? intimacy? status?) → ③ **consequences** (what the offender got out of it: relief? excitement? respect?). The psychologist then chooses a treatment that targets the function.

FORM Two case studies · 两个案例

ANSWERS → 课件 §12

Case A — The Kaia jewellery heist (课本 Activity 2)

Background: Kaia, a young woman, broke into a high-end jewellery shop and stole a large quantity of diamonds. Read the full case on the courseware, then check which items are **criminogenic factors** (belong to *Kaia the person*) vs **trap items** (describe the crime itself, not the person). One row has been filled as an example.

	Item 资料	Mark tick 勾选	If you ticked it — which layer? 属于哪一层
k1	Kaia had severe financial difficulties.		Contingency (what the theft *got* her)
k2	She justified theft as "Robin Hood" — taking from the rich.		_____ (Cognitive distortion 认知歪曲)
k3	Tumultuous childhood; no stable friends.		Early experiences / social circumstances
k4	Father was imprisoned for fraud.		_____ (Family criminal model 家庭犯罪榜样)
k5	Kaia continued visiting her father in prison.		Identification with father / relationship
k6	The diamonds were worth £2 million.		_____ (TRAP — case fact, not a factor 案件事实)
k7	She bypassed a sophisticated alarm system.		_____ (TRAP — method, not motive 手法而非动机)
k8	She was arrested at the airport.		_____ (TRAP — outcome, not cause 后果而非成因)

Now connect each criminogenic factor to a perspective · 接上视角

Item	Perspective 视角	Item	Perspective 视角
k1	_____ (behavioural)	k3	_____ (psychodynamic)
k2	_____ (cognitive)	k4-k5	_____ (SLT / psychodynamic)

Case B — Darian & the prisoner (3-mark exam item)

> *Darian asks the prisoner about his childhood when he was neglected by his parents. He also asks about his current relationships (unstable), his addiction, and homelessness. Explain how Darian may conduct a psychological formulation. (3 marks)*

List the 3 key marking points (one mark each):

1.
2.
3.

(Mark scheme: ① gathers information about relationships, social circumstances, life events · ② interviews the offender directly · ③ applies theory to form a hypothesis about the *function* of offending to inform decisions about risk / rehabilitation.)

§13 — Strengths & limitations of formulation · 优缺点

Point 评价点	Why	Mark-scheme echo 评分要点
Strength 1 — tailored to the individual	Unlike statistical risk tools (e.g. actuarial risk scales), a formulation captures the offender's _____ (unique life history 独特的人生经历) and the specific _____ (function 功能) their offending served.	AO3 — evaluation.
Strength 2 — improves staff understanding	Prison staff who understand *why* an offender behaves a certain way are better placed to _____ (manage them safely 安全管理) and build rapport.	AO3 — application.
Strength 3 — first step to change	Explaining the formulation *to* the offender themselves gives them a non-judgemental account of what led them to offend — can be the first step in _____ (rehabilitation 康复).	AO3 — application.
Limitation 1 — subjective	The psychologist _____ (interprets 解释) the information; different psychologists may emphasise different things. There is _____ (inter-rater variability 评分者间差异).	AO3 — evaluation.
Limitation 2 — hard to measure effectiveness	You cannot simply count "did they reoffend?" because many reoffenders are _____ (never caught 从未被抓). So *reoffending rate* underestimates real reoffending.	AO3 — evaluation (a Checkpoint answer too).
Limitation 3 — depends on information given	An offender may _____ (hide / distort 隐瞒 / 歪曲) their history. The formulation is only as good as what the offender (and the files) reveal.	AO3 — evaluation.

CI vs Formulation at a glance · 一图对照

	CI Cognitive interview	FORM Case formulation
Stage	**Before** trial (witness is recalling a crime).	**After** conviction (offender is being understood).
Done by	Police officer / detective.	Forensic psychologist.
Aim	Get **more accurate recall**.	Understand **why** the offence happened.
Output	Witness statement.	Risk assessment + treatment plan.

Checkpoint wording to watch · 考试易错点

"Is a psychological formulation used to catch an offender?" — answer **No**. It's used after the catch. **"Is offence analysis an objective account?"** — **No**, it involves interpretation. **"Are reoffending rates a good measure of effectiveness?"** — **No**, many reoffenders aren't caught.

EXAM Checkpoint 9 quick questions · 课本自测

ANSWERS → p. 14

How to use this page · 用法

On the courseware these are interactive (Q1-Q9 with click-to-reveal feedback). On this paper workbook, **write your answer first**, then check against the answer key on page 14. Don't peek.

Q1 — Name the four techniques used in the cognitive interview.

1.
2.
3.
4.

Q2 — The cognitive interview was designed from which two cognitive theories?

_____ ((year + name + one-line)) and _____ ((year + name + one-line))

Q3 — What is one weakness with using the cognitive interview by police in the field?

Q4 — Name one study which found that recall using the cognitive interview was significantly better than using a standard interview.

_____ (researcher + year) — also note one number: _____

Q5–Q8 — Tick True (T) or False (F), then justify in one line.

#	Statement	T/F	Justification (one line)
5	A psychological formulation is used to catch an offender.		
6	An offence analysis is an objective account of an offender.		
7	Reoffending rates are a good measure of the effectiveness of a psychological formulation.		
8	Psychological formulations increase staff knowledge and understanding of an offender.		

Q9 — What other uses are there for a psychological formulation? (List at least 2.)

EXAM Exam practice · 课本真题演练

ANSWERS → p. 14

Question 1 — Olivia & Rhys · 12 marks (AO2/AO3)

Olivia has recently completed her training as a police officer. She has been asked to conduct a cognitive interview for the first time. Rhys was at the department store when the theft took place. He saw a woman running out of the store being chased by a security guard.

(a) Discuss how Olivia could use cognitive interview techniques to help Rhys recall the incident. (8 marks)

(b) Explain one strength and one weakness of Olivia using a cognitive interview with Rhys. (4 marks)

Plan (a) — 8 marks · four CI techniques × 2 marks each

#	Technique 技巧	What Olivia says 实际问法	Why it works 对抗哪个问题 (Bartlett / Tulving)
1	Report everything		
2	Reinstate context		
3	Change order		
4	Change perspective		

Plan (b) — 4 marks · one strength + one weakness with WHY

Strength ((named study + number))

Weakness ((named study + number))

Question 2 — Darian & the prisoner · 3 marks (AO1/AO2)

Darian is a psychologist who works in a local prison. He has been asked to carry out a case formulation on a prisoner being considered for release. The prisoner has not been engaging in a treatment programme. Darian asks about the prisoner's childhood (neglected by parents), current relationships (unstable), an addiction, and homelessness before prison. ***Explain how Darian may conduct a psychological formulation to understand the function of offending behaviour. (3 marks)***

1.
2.
3.

(3 marks = 1 each for gathering info · interviewing offender · applying theory to find *function* to inform risk / rehab decisions.)

Key terms revision · 词条默写

ANSWERS → p. 14

Write the textbook definition for each term · 默写课本定义 (key words only — fill the gaps)

Term 词条	Definition (fill the gaps) 定义填空
Cognitive interview	A way of interviewing a _____ to _____ the amount of correct information they recall, using four specific techniques.
Reconstructive memory	Memory is an active _____, not a recording; recall is filled in using _____. (Bartlett 1932)
Context-dependent memory	Memory is best retrieved when the _____ at retrieval matches the context at _____. (Tulving 1974 / Godden & Baddeley 1975)
Schema	A mental _____ of how things usually work, used to fill in gaps in recall.
Report everything	CI technique: witness gives a _____ account without interruption.
Reinstate context	CI technique: witness _____ rebuilds the crime scene mentally.
Change order	CI technique: witness recalls the event in a _____ sequence.
Change perspective	CI technique: witness recalls the event from _____ (another person's view).
Enhanced CI	An updated version adding rapport, _____ transfer, and non-leading follow-up questions. (Fisher & Geiselman 1992)
Misleading question	A question that suggests a particular _____ and may contaminate recall. (Loftus & Palmer 1974) — not CI but tested in the same chapter.
Offence analysis	Studying the _____ of a crime to understand what happened and possibly link cases.
Psychological (case) formulation	Gathering information about an offender and _____ theory to form a hypothesis about the **function** of their offending.
Function of offending	What _____ the offending met for the offender — control, status, intimacy, relief.
Criminogenic factors	Personal/background factors that increase the _____ of offending (vs. facts of the crime itself).
Risk assessment	A judgement of how _____ an offender is to reoffend, used for release / treatment decisions.

Why these terms? · 为什么背这些

The exam rewards **using the textbook's word**, not paraphrasing. A 4-mark question that includes the wrong term (e.g. "interview" instead of "cognitive interview") loses marks even if the rest is right.

Brain dump · 合上笔记默写

9 lines · no peeking

How to use · 用法

Close the workbook. Set a timer for 5 minutes. Write as much as you can remember of the chapter in the lines below. No peeking. Then open to page 14 and tick what you remembered, mark what you missed in red. Repeat until you score 9/9.

Section 1 — The cognitive interview (CI) · 认知访谈

Section 2 — Two memory foundations · 两大原理

Section 3 — Psychological formulation · 心理/个案概念化

p.3 — Two memory foundations

Bartlett (1932): memory is not a recording but an active *re-building*; recall is filled in using *schemas*. *Risk:* a witness's recall may be contaminated by what they *expect to have seen*. *Fix:* break the witness out of story mode — reverse the order, change perspective.

Tulving (1974): memory is best retrieved when the *context* at retrieval matches the context at encoding (mood, surroundings, sounds, weather). *Risk:* a witness in a quiet police station has lost the cues. *Fix:* ask the witness to mentally rebuild the original scene.

p.4 — Four techniques

Report everything — let the witness give a free, uninterrupted account; trivial details can act as memory cues. Fights *Bartlett* — invites raw detail schemas would skip.

Reinstate context — ask the witness to mentally rebuild the scene. Fights *Tulving* — restores encoding cues.

Change order — recall the event in reverse / a different sequence. Fights *Bartlett* — breaks story mode.

Change perspective — recall from another person's standpoint (security guard, cashier). Fights *Bartlett* — different retrieval route, different detail.

p.5 — Interview flow (5 steps)

① Transfer rapport from first officer → ② Open question / free recall → ③ Apply 4 CI techniques → ④ Specific follow-up questions → ⑤ Return witness to a normal emotional state.

p.5 — Geiselman (1985) numbers

CI = 41.15 correct items; Standard = 29.40. Confabulations *roughly equal* — extra items are real, not guesses.

p.6 — Evidence table

Fisher (1989): field study on real crimes in Florida; real detectives recovered +47% more correct info with CI.

Köhnken (1999): meta-analysis of 42 studies; CI reliably outperforms standard.

Holliday (2003): children aged 5-10 vs 11+; CI works well for 11+, only modest gains for younger.

p.7 — Formulation & offence analysis

Formulation: psychologist gathers information about offender's life (relationships, social circumstances, life events) and applies psychological theory to form a hypothesis about the *function* of offending — informs risk assessment, rehab programme, release.

Offence analysis studies the facts of the crime; **formulation** studies the person who did it. Offence analysis is closer to objective; formulation is *subjective*.

p.8 — Kaia marks & Darian

Kaia criminogenic factors (5): k1 financial / k2 Robin Hood / k3 chaotic childhood / k4 father imprisoned / k5 visits father. **Traps (not factors):** k6 diamond value / k7 alarm bypass / k8 airport arrest.

Darian 3 marks: ① gather info on relationships, social circumstances, life events · ② interview the offender directly · ③ apply theory to form a hypothesis about the function of offending, to inform risk / rehab decisions.

p.10 — Checkpoint

1: four techniques. 2: Bartlett (1932) reconstructive + Tulving (1974) context-dependent. 3: time-consuming / inadequate training (Dando 2008 — 221 officers). 4: Geiselman (1985) — 41.15 vs 29.40. 5: False. 6: False. 7: False. 8: True. 9: risk / rehabilitation / explaining to offender.

p.11 — Exam model (Olivia & Rhys)

(a) Report everything: Olivia should let Rhys give a free, uninterrupted account — even trivial details may act as memory cues. **Reinstate context:** she should ask him to mentally rebuild the store — what he saw, heard, how he felt — restoring encoding cues (Tulving). **Change order:** ask him to recall in reverse, breaking story formation (Bartlett). **Change perspective:** ask what the security guard chasing the woman would have seen — only what he actually knows.
(b) Strength: Geiselman (1985) CI 41.15 vs 29.40 — Rhys is likely to give more useful detail. **Weakness:** takes more time and needs training (Dando 2008) — a newly trained officer in a busy investigation may struggle.

p.12 — Key terms (key words)

Cognitive interview: interview a *witness* to *maximise* correct info. **Reconstructive memory:** active *re-building* using *schemas* (Bartlett 1932). **Context-dependent memory:** best when retrieval context matches encoding context (Tulving 1974). **Schema:** a mental *expectation*. **Report everything:** *uninterrupted* account. **Reinstate context:** *mentally rebuild* scene. **Change order:** *different* sequence. **Change perspective:** another person's view. **Enhanced CI:** *rapport* transfer. **Misleading question:** suggests a particular *answer*. **Offence analysis:** *facts* of crime. **Formulation:** apply *theory* to find **function**. **Function of offending:** *need* the offending met. **Criminogenic factors:** *risk* factors. **Risk assessment:** how *likely* to reoffend.

Final scoring check · 考前 1 分钟

Walk through this list in your head before the exam. You should be able to say the answer in one sentence to each:

1. Two CI foundations = Bartlett (1932) reconstructive + Tulving (1974) context-dependent.
2. Four CI techniques = Report everything · Reinstate context · Change order · Change perspective.
3. Geiselman headline number = 41.15 vs 29.40; confabulations roughly equal.
4. Formulation = gather life info + apply theory → hypothesis about **function** of offending → inform risk / rehab.
5. Formulation is used **after** the offender is caught — not to catch them.
6. Offence analysis is **not** objective; formulation is **subjective**.
7. Reoffending rates are **not** a good measure of formulation effectiveness (many reoffenders aren't caught).
