What this workbook covers 本册讲什么

You cannot watch an attitude — sometimes the only way in is to **ask**. This booklet walks through surveys as self-report: question types (closed/open, Likert and ranked scales), design traps (social desirability, response bias), the reliability and validity checks every questionnaire must survive, the three interview types, researcher effects, primary vs secondary data, and alternative hypotheses.

How to use this booklet 怎么用

1. **Fill it in as you go** — check the answer key (pp. 19–20) after each page.
2. **Pages 4–5 (question types + scales) and 8–9 (reliability/validity) matter most.** Quantitative data is the single most frequent theme in past papers — redo those pages from memory.

Content map 内容地图

Page	Topic	What you must be able to do afterwards
p.2	Self-report 两种工具	Define survey, questionnaire, interview
p.3	Two kinds of data 数据类型	Sort quantitative vs qualitative; objective vs subjective
p.4–6	Question types & scales 题型	Closed/open, Likert, ranked; odd/even; response bias
p.7	Design issues 设计坑	Social desirability, construction, privacy
p.8–9	Reliability & validity 信效度	test-retest, split-half; face, predictive, concurrent
p.10–11	Interviews 访谈	Structured / semi-structured / unstructured
p.12	Researcher effects 研究者效应	Who the researcher is + what they expect
p.13	Primary vs secondary 主次数据	Define both; give one strength and one weakness each
p.14	Alternative hypotheses 假设	Write a clear, testable, precise prediction
p.15–18	Exam skills & practice 考试	Point-Because-So; Carlos question set; 8-mark plan
p.19–20	Answer key 答案速查	Mark honestly, then re-write wrong answers in full

Revision tracker 复习打卡

☐ p.3 data types ☐ p.4–6 scales ☐ p.7 design issues ☐ p.8–9 reliability/validity ☐ p.10–11 interviews ☐ p.12 researcher effects ☐ p.13–14 data & hypotheses ☐ p.15–18 exam

The whole topic in one sentence 一句话总结

Surveys gather self-report data through **questionnaires and interviews**; every question yields **quantitative or qualitative** data; a good instrument survives checks of **reliability** (consistent) and **validity** (measuring what it intends), avoids **social desirability** and **response bias**, and controls **researcher effects** — because what people *say* about themselves is not automatically what they *do*.

1 · Self-report: the two tools

Fill the gap 填空

A **survey** is a _____ method, used to gather information about how people feel, their _____ and opinions, personality types and other traits.

Questionnaires can be administered by post, _____, face to face or _____.

An **interview** is when respondents answer questions _____, rather than writing them.

Compare the two tools 对比

	Questionnaire	Interview
How answered	written	
Best at reaching		depth — reasons in the respondent's own words

The shadow of self-report 自我报告的阴影

Self-report data is what people *say* about themselves — not necessarily what they actually do. Every evaluation you write about surveys lives in this gap. Keep it in mind on every page that follows.

中文理解 为什么只能「问」？
态度、观点、性格这些东西**看不见**——实验测不出、天平称不了，只能开口问。
问的形式两条路：**问卷**（笔答，量大、便宜、快）和**访谈**（口答，深、细、能追问）。
但问出来的话 = 「对方想让你听的版本」，不是 automatically 真话。

2 · Two kinds of data

Definitions 定义

Quantitative data: information that is _____ or can be _____ into numbers.

Qualitative data: information that is _____ prose.

Sort the data 分类

Answer collected	Quantitative or qualitative?
"7 out of 30 students circled Daily."	
"I text constantly because my friends live abroad."	
A rating of 4 out of 5 on a satisfaction scale	
A paragraph describing what makes school stressful	

Objective vs subjective 主观与客观

Estimate the length of a classroom table → two people disagree → **subjective**. Measure it with a ruler → they agree → **objective**. Quantitative data is objective because _____; qualitative data can be subjective because _____.

中文理解 能算数 vs 要读懂

quantity = 数量 → quantitative = 能变成数字的（几个、几分）；
quality = 性质 → qualitative = 用文字描述的（为什么、什么感受）。
口诀：**能算数的是 quantitative，要读懂的是 qualitative。**

3 · Closed and open questions

Definitions 定义

Closed questions have _____ fixed answers that a respondent selects by _____ or _____. They yield _____ data.

Open questions do not involve _____ answers; respondents answer _____. They yield _____ data.

Sort the questions 分类

Question	Closed / open?	Data it yields
Do you have a pet? Yes / No		
Age: 18–40 / 41–60 / 60+ (please circle)		
Explain why you would or would not walk on the grass.		
How regularly do you text? Daily / Weekly / Occasionally / Never		

The trade-off 代价表

	Gain	Lose
Closed	quick to answer; easy to analyse	
Open		time and effort; needs qualitative analysis (subjective)

中文理解 一眼判断

只看一件事：**答案是不是预先写好的。**是 → closed（→数字→浅）；不是 → open（→文字→深）。
闭卷题问「哪种题型给 quantitative」→ 答 closed；问「哪种给深度原因」→ 答 open。

4 · Attitude scales: Likert

Why scales exist 量表为什么存在

A yes/no answer is fast but shallow. **Attitude scales** were designed to increase the _____ achieved in a questionnaire: instead of a yes/no response, they offer a _____ of options so that the _____ of opinion can be gauged.

Build a Likert question 搭一个量表

Statement: "*I am happy with my purchase today.*" Fill in the five options in order:

_____ → Agree → _____ → Disagree → _____

Odd or even? 奇数还是偶数

An **odd** number of options gives a _____ value, which respondents may select more _____.

An **even** number forces respondents to make a _____ rather than hide behind 'neutral'.

Link back 呼应旧知识

A Likert scale was used in the **Adorno et al.** survey on authoritarianism — the same scale type you met in the obedience topic.

中文理解 Likert = 竖着打分

Likert：给**一句话**表态，非常同意 → 非常不同意五个台阶。
选项数量是设计决策：**奇数留中立逃生门，偶数逼人站队。**

5 · Ranked scales and response bias

Ranked scales 排序量表

Ranked scales involve a respondent _____ their choices relative to other options. Each preference should be given a _____: to rank animals by fear, the _____ feared animal gets the highest score.

Response bias 反应偏差

If all the statements in a set are worded in the _____ direction, respondents can slip into just _____ or just _____ with all of them. Fix: statements should be _____ and _____ up.

Write the reversed versions 写反向句

Example statement	Reversed statement (write it)
Employment helps society to function.	
Pets make people happy.	

Likert vs ranked 一句话区分

	Likert-style	Ranked
Task		order options relative to each other
Key mechanism	rate agreement on fixed options	

中文理解 一个竖一个横

Likert 竖着打分（对一句话表态）；**ranked 横着排队**（一堆东西比出 1、2、3、4 名）。
Response bias 是「无脑全勾同意」——反向句混进去，划水的人立刻现形。

The three traps 三个坑

Issue	What goes wrong	Fix
Social desirability		detect with reversed statements
Question construction	questions too technical, ambiguous, complex, leading — or intrusive	
Response bias		reverse & mix statements; even-numbered scale

Social desirability in full 社会赞许性

Social desirability occurs when a respondent does not give a _____ answer, but one which depicts them in a more _____ light — an answer that fits prevailing _____ norms.

It is particularly problematic for research into socially _____ issues, or attitudes that go _____ social norms.

Key term: privacy 隐私

Privacy: participants should not be asked personal questions that they may find _____, and the researcher must not obtain personal data that a participant would not _____ disclose.

中文理解 坑在哪、怎么填

坑一在人（自我美化）→ 用反向陈述**检测**；
坑二在题（太技术/有引导/侵犯隐私）→ 写**简单**、**中立**、**守隐私**的题；
坑三在格式（全同向 → 无脑全勾）→ **反向混排 + 偶数选项**。

The two directions 两个方向

Reliability refers to the _____ of a measure or finding.

External reliability: consistency of a measure _____.

Internal reliability: consistency of a measure _____.

Match the method 连线配对

Method	What it checks	How it works (fill in)
Test-retest		same _____, same _____, different _____
Split-half		split the _____ into two _____ and compare the findings

Interpret it 会读结果

In a split-half check, if both halves achieve the _____ score, the questions are measuring the same concept. If they do not, some questions may be measuring a _____ concept.

中文理解 对外看时间，对内看拆半
信度 = 「每次测都一样」吗?
external = 隔段时间再测稳不稳 → **test-retest**（同一批人再测）;
internal = 问卷内部几道题是否都测同一个东西 → **split-half**（拆两半对答案）。

The core question 核心问题

Validity refers to the extent to which something is measuring _____ it _____ to measure.

Match the three types 三种效度配对

Type	Definition (fill in)	Example
Face	looking at each question and deciding whether it makes _____ for the _____ being measured	an expert reviews your questions
Predictive	results can predict _____ behaviour	
Concurrent	comparing evidence from several studies testing the _____ thing to see if they _____	

Reliability vs validity 信 vs 效

Reliability asks "_____?"; validity asks "_____?". A ruler that always reads 3 cm short is perfectly _____ but not _____.

中文理解 三种效度一句话

face = 看脸——题目像不像在测它；**predictive** = 预言——今天分数预测未来行为；**concurrent** = 对照——和别人家同主题测试比一致。

信度问「稳不稳」，效度问「准不准」——**稳但不准**的尺子每天都错得一样整齐。

9 · Structured interviews

Definition 定义

Structured interviews are _____ so that all respondents are asked the _____ preset questions in the _____ way.

Weigh it up 权衡

Strengths	Weaknesses
easy to administer	
	data can be superficial and lack depth
easy to repeat	
	respondent may feel _____ and unable to express opinions fully

Spot the type 判断类型

Scenario (from the textbook's Activity 3)	Type?
A researcher writes specific questions to ask people in friendship groups about how friendships form	
A researcher has a conversation with students in the dining room about preferred meals	
A researcher wants pet types and ownership times, but also to explore reasons for owning pets	

中文理解 三种剧本

structured：照剧本念，好重复但浅；**semi**：有提纲能跑题，又有结构又深；**unstructured**：纯聊天最深，但费时、不可复制。

判断口诀：**剧本越死越好比，剧本越活挖越深。**

Semi-structured 半结构化

The researcher has _____ questions that they aim to be answered, but does not have a _____ format to follow and can _____ from the script. This type can gather both _____ and _____ data.

Unstructured 无结构

Begins with a _____ research aim and gathers information in the form of a _____. The interviewer needs to be _____ during the interview so they can probe and seek meaning; they need good _____ skills and should use non-_____ language.

Weigh unstructured up 权衡

Strength	Weaknesses
deepest detail; rapport; responsive probing	
	time consuming to conduct and analyse
	not _____ — different questions in each interview

Ethics spotlight 伦理

Ethics are **critical** in unstructured interviews because the qualitative data can make direct reference to _____ from respondents. All details must be _____, and personal details _____.

中文理解 伦理为什么最紧张

无结构访谈会挖到**原话引用**——一句 Quote 就可能认出一个人。

所以：**匿名化 + 打散个人细节 + 问敏感问题要温柔**（别破 privacy）。

Two faces of the problem 两副面孔

Face	What it means	Control
Who the researcher is	sex, age, manner and _____ affect how people respond and whether they disclose	predict the influence and _____ it (e.g. employ a female interviewer)
What the researcher expects	smiling in approval; inadvertently asking questions that confirm the expected outcome = _____ bias	

The fix 对策

Researcher effects can be reduced by using an _____ researcher who is trained in interviewing techniques, but is _____ of the study aims.

Apply it 应用

A male interviewer will be unlikely to obtain detailed information from a female participant about her view of _____ within her peer group — so the researcher controls this by _____.

中文理解 提问者就是环境

面对面提问时，你的**性别、年龄、语气、表情**都影响对方敢不敢说真话。
两条腿：**你是谁**（身份阻碍披露）+ **你盼什么**（confirmation bias 钓答案）。
对策一句话：**换一个不知道研究目的的独立访谈者。**

The comparison 对照表

	Primary data	Secondary data
Source	gathered _____ by the researcher from participants	gathered from _____ studies by other researchers
Fit to aim	first-hand; _____ to the aims of the study	second-hand; may be _____ specific to the aims
Cost	_____ to collect	already collected — just _____ and compare
Freshness / scale	_____	may be _____; but _____ amounts give an overview

Key term 文献综述

Literature review: when a researcher _____, _____ and draws conclusions from _____ people's research.

Sort the scenarios 判断

Scenario	Primary or secondary?
Marco reads articles about workplace conformity for his research	
Philipina conducts a questionnaire about recycling influences in her city	

中文理解 只问一句

数据是不是你自己直接向参与者收集的?

是 → primary（实验、观察、问卷都算）；不是（从别人研究里拿）→ secondary。

primary 贴合目的但费时；secondary 省时量大，但可能过时、不对口。

What a hypothesis must be 三个要求

An alternative hypothesis is a _____ about what is likely to occur. It should contain the _____ under investigation and be a clear, _____ and _____ statement at the beginning of a study.

Directional or not? 方向问题

If previous research is limited or findings are _____, the prediction may only state that a _____ or _____ might be found — without saying which _____ it takes.

Write two hypotheses 写两条

(a) Directional: students who score higher on a conformity scale report *more* agreement with the majority.

(b) Non-directional: a difference in self-reported conformity between year groups. (Say only that a difference exists.)

中文理解 备择假设 = 郑重的预测

开工前把「我觉得会发生什么」写成**明确**、**可检验**、**精确**的一句话，并写明变量。

有把握 → 指方向；研究少/结论乱 → 只说「会有差异/关系」。

检验：别人读完能**照着做研究去验证对错**，才叫 testable。

The rule 规则

Asked for a strength or weakness of questionnaires *as used in social psychology*? A generic answer scores 0 — the answer must relate to **social psychology specifically**.

Cloze the model answer 填空范文

"One _____ with using questionnaires in social psychology is that participants may answer in a way that portrays them in the best possible light: _____ bias may occur. This means that people may say that they are more _____ than they actually are because they don't want people to think they are _____."

Dismantle it 拆结构

Slot	Job it does
Point	
Because	
So what (social psych)	

中文理解 万能公式
① 报术语（One weakness is social desirability bias…）
② 讲机制（…because people don't want to be seen as disobedient…）
③ 落回社会心理学（…so they may say they are more obedient than they actually are.）
缺第 ③ 步 = 泛泛而谈 = 低分。

Cloze the model answer 填空范文

"One _____ of using interviews in social psychology is that in-depth answers contain detailed information and _____ why individuals may consider others to have _____ or power. This increases the _____ of the data gathered by social psychology researchers about topics such as _____."

Strengths and weaknesses bank 素材库

Method	Signature strength	Signature weakness
Questionnaire		social desirability bias
Interview	depth — reveals reasons for authority/power perceptions	
Structured		superficial; stifled respondents
Unstructured	rapport; responsive probing	

中文理解 背「签名级」优劣

每种方法背一条最强的优点 + 一条最强的缺点，考场上组合进 Point-Because-So：
问卷 → 快、便宜、好分析 / 社会赞许性；访谈 → 深挖原因 / 研究者效应；
结构化 → 好重复 / 浅；无结构 → 深 / 费时不可复制。

16 · Exam practice — Carlos (from the textbook)

Carlos wants to test how compliant pedestrians are to signs which ask them to 'keep off the grass'. He designs a questionnaire to gather quantitative data from pedestrians who visit a local park.

(a) State one closed question Carlos could use about obedience. (1)

(b) State one open question Carlos could use. (1)

(c) Explain how Carlos would recruit participants using opportunity sampling. (2)

(d) Explain one weakness of Carlos using opportunity sampling. (2)

中文理解 答题提示

(a)(b) 各写一个具体问题——closed 必须有预设选项；open 必须让人自由写。
(c) 机会抽样 = **谁在场问谁**（公园 + 当时在场的行人）。
(d) 沿链条走：**只有当时在场的人被选中 → 不代表总体 → 结论推广受限**。

17 · 8-mark planning — evaluate questionnaires

Evaluate questionnaires as they are used in social psychology. (8 marks)

Plan it — two strengths, two weaknesses 列提纲

#	Point	Because + so what for social psychology
S1		
S2		
W1		
W2		

Write one paragraph in full 写一段

Scoring self-check 自评

☐ 每段都报了术语名 ☐ 每段都有 because 机制 ☐ 每段落回社会心理学（obedience / conformity 场景） ☐ 至少一处用到本册术语（social desirability / response bias / reliability…）

Brain dump 先自测

Cover everything. Write every term you remember from this booklet — question types, scales, traps, reliability, validity, interviews, data, hypotheses:

Answer key pp.2–7 答案（上半）

- **p.2** self-report; attitudes; email; online; directly. Questionnaire: written / large sample. Interview: spoken / depth.
- **p.3** numerical, converted; non-numerical. Sort: quant, qual, quant, qual. Numbers are not open to interpretation; meanings in prose are open to interpretation.
- **p.4** preset; circling, ticking; quantitative. Open: preset; freely; qualitative. Sort: closed/quant; closed/quant; open/qual; closed/quant. Closed loses the "why"; open gains depth.
- **p.5** level of detail; range; strength. Strongly agree; Neutral; Strongly disagree. Odd: middle, frequently. Even: choice.
- **p.6** ranking; weighting; most. Same direction; agreeing, disagreeing; reversed, mixed. Reversed: "Employment does not help society to function."; "Pets do not make people happy."
- **p.7** Social desirability: not give a genuine answer…favourable light…social norms; sensitive; against. Construction fix: simple, neutral, privacy-respecting. Response bias: blanket agreement. Privacy: intrusive; voluntarily.

Answer key pp.8–17 答案（下半）

- **p.8** consistency; over time; within itself. Test-retest: external — same people, same questionnaire, different occasion. Split-half: internal — questions, two halves. Same score; different concept.
- **p.9** what, intends. Face: sense, construct. Predictive: future — intelligence score → degree grading. Concurrent: same, agree — compare to another test of the same construct. Consistent? / measuring the right thing? reliable, valid.
- **p.10** standardised; same, same. Weaknesses filled: stifled. Types: structured; unstructured; semi-structured.
- **p.11** preset; standardised; deviate; quantitative, qualitative. Loose; conversation; analytical; listening; judgemental. Not replicable. Quotes; anonymised; disguised.
- **p.12** personality; control. Confirmation. Independent; not aware. Friendships; employing a female interviewer.
- **p.13** directly; existing; specifically; less; time consuming; analysed; current; out of date, large. Literature review: reads, summarises, other. Marco: secondary; Philipina: primary.
- **p.14** prediction; variables; testable, precise. Mixed; difference, relationship; direction.
- **p.15** weakness; social desirability; obedient; disobedient. Point = name the bias; Because = people protect their image; So what = self-reported obedience inflated.
- **p.16** strength; reasons; authority; validity; obedience. Bank rows: questionnaire — reaches large samples cheaply; interview — researcher effects; structured — standardised, repeatable; unstructured — time consuming, not replicable.
- **p.17 (a)** e.g. "Would you walk on the grass if a sign asked you not to? Yes / No." **(b)** "Explain why you would or would not walk on the grass when the sign asks you not to." **(c)** Go to the park and ask pedestrians available at the time. **(d)** Only those present then are selected → unequal chance → unrepresentative → limited generalisability (also: direct asking pressures people to participate).

Last look 最后过一遍

Closed→quant·浅 | Open→qual·深 | Likert 打分 | ranked 排序 | odd 留中立·even 逼站队 | test-retest 外信 | split-half 内信 | face/predictive/concurrent | structured 浅可重复 | unstructured 深不可复制 | primary 亲手收·secondary 别人收。
