6.1.6 CBT as a Therapy for Offenders（用认知行为疗法治疗犯罪者）

What this workbook covers 本册讲什么

Prison punishes — but punishment alone does not teach a person *how* to live differently. This booklet walks through **cognitive behavioural therapy (CBT)** for offenders: how it works, the three named programmes (**R&R, MRT, anger management**), the effectiveness evidence with every figure, and how to write the evaluation.

How to use this booklet 怎么用

1. **Fill it in as you go** — write the word or number in the blank before checking the answer key (pp. 19–20).
2. **Pages 10–11 (evidence & numbers) and 15–17 (exam) matter most.** Do them from memory, under time.

Content map 内容地图

Page	Topic	What you must be able to do afterwards
p.2–4	Foundations：punishment vs treatment · the CBT premise · criminal thinking	Recite the Situation → Thoughts → Feelings → Behaviour chain; list four thinking distortions
p.5–6	R&R 与 MRT 两个项目	Designer, country, session format; reason vs morality training
p.7–9	Anger management（三步 · 日记 · 技能训练）	Novaco's three channels; the three steps in order; complete a diary row
p.10	Evidence 证据总表	Fill the full studies table with correct figures
p.11	Every number 数字收口	Cover the right column and test yourself
p.12–14	Evaluation 评价	Strengths, limitations and debates, each with a consequence
p.15	Exam skills 答题技巧	Command words, marks, sentence frames
p.16–17	Practice A & B 演练	Short answers, then the evaluation answer
p.18	Final check 五分钟默检	Ten answers from memory, no notes
p.19–20	Answer key 答案速查	Mark honestly, then re-write wrong answers in full

Revision tracker 复习打卡

☐ p.2–4 foundations ☐ p.5–6 R&R / MRT ☐ p.7–9 anger management ☐ p.10–11 evidence ☐ p.12–14 evaluation ☐ p.15–17 exam ☐ p.18 recap

The whole topic in one sentence 一句话总结

Criminal thinking is **learned** — so it can be retrained: CBT helps offenders notice their distorted thoughts (blaming others, seeing threats, self-justifying) and replace them with **prosocial** thinking, and the evidence is that named programmes cut reoffending by **15% (R&R)**, **up to a third (MRT)** and **up to 30% (CBT overall)** — but only for offenders who are **motivated**, and only if we also remember that poverty and jobs, not just thinking, predict reoffending.

§1 · Why punishment is not enough

ANSWERS → p.19

Two things the justice system can do

Once an offender is convicted, they typically receive a **custodial** sentence (prison) or a **non-custodial** sentence (e.g. a fine or community service). They may *also* be recommended for _____. (what this booklet is about)

What punishment can and cannot do

	Punishment	Treatment
Aim	Act as a _____; restrict activities; remove community access	Identify problem behaviours and their _____ causes; teach non-offending ways to cope
What it teaches	That offending has _____	New skills for situations the offender cannot yet handle
Limitation	Does _____ directly teach a different way to act	Requires time and the offender's commitment

(deterrent / consequences / root — 每空一词)

中文理解：为什么只有惩罚不够

惩罚只说了一半的话：「别做，做了有后果」。但有些犯罪是因为**缺少应对技能**（不会处理冲突），有些是因为**学会了犯罪能带来好处**。惩罚不教新的做法，所以单靠它挡不住再犯。治疗的思路是：找到问题行为及其根源 → 教会用**不犯罪的方式**解决问题。

Who delivers it, and where

Treatment is mostly delivered by _____ psychologists or trained staff under their supervision. It can take place in the _____ or in _____; the principles are the same in both places, but the extent differs with the severity of the offence and the _____. (forensic / two settings / risk of what)

§2 · The CBT premise: thoughts drive behaviour

ANSWERS → p.19

The chain

For every situation we experience we have _____ about it (the _____ part of CBT). We also have emotional reactions. These thoughts then influence our _____ (the _____ part).

(thoughts / cognitive / behaviour / behavioural)

> **中文理解：CBT 改的是哪一环**
> 情境本身往往改不了（同一个人挑衅你，你还是会在那个场合）。CBT 押注的是中间的「想法」：同一个情境，换一种解读，情绪和行为就跟着变。所以治疗目标是发展**觉察（insight）**——先看见自己的想法，再把歪曲的想法换成亲社会的想法。

Key terms — define them in your own words

Term	Your definition
CBT (cognitive behavioural therapy)	
prosocial behaviour 亲社会行为	
cognitive restructuring 认知重构	

Prosocial = behaviour that takes account of the _____ of others and avoids harming others _____. Cognitive restructuring = identifying and challenging maladaptive/negative thinking patterns and _____ them with more objective and adaptive ones.

Delivery

Tick what the textbook says about how CBT can be delivered:

☐ individual, with a therapist ☐ group, with a therapist guiding discussion ☐ only one-to-one ☐ community or prison

§3 · What is wrong with criminal thinking?

ANSWERS → p.19

The theoretical basis

CBT has a sound theoretical basis because the way a criminal thinks has been firmly linked to their offending behaviour (_____, 1999). These distorted ways of thinking are assumed to be _____ — which is exactly why they can be retrained.（Beck / learned）

Four thinking distortions 歪曲思维（必背清单）

Distortion	In plain words
1. _____ the blame onto the victim or an external source	「是受害者自己撞上来的，不怪我」
2. _____ their offending	「他有钱，偷他一点不算什么」
3. _____ social cues as potential threats	「他看我一眼就是想找茬」——把中性信号读成挑衅
4. _____ related to self-dominance and personal entitlement	「我说了算」「世界欠我的」

So what does CBT try to do about it?

Number the three aims 1–3 in the order the textbook lists them:

☐ develop **victim empathy**（共情受害者） ☐ **identify and restructure** the faulty patterns of thinking ☐ **challenge** the tendency to self-justify their offending

Why this matters for the exam 考试提示

「歪曲思维是**习得的**」这句话是整页的枢纽：因为它能被学到，所以能被重新教好。写 8 分题时，把这句话放在开头做逻辑起点。

§4 · Programme 1: Reasoning & Rehabilitation (R&R)

ANSWERS → p.19

The basics

R&R was developed in _____ by Robert _____ and Elizabeth _____ (_____). (Canada / Ross / Fabiano / 1985)

Format — memorise these four numbers

Question	Answer
How many group sessions?	_____ sessions
How long is each session?	_____ hours
How often?	_____ to _____ times per week
Setting?	_____ sessions

What happens in a session

Tick the four activities the textbook names:

☐ group discussions ☐ Socratic questioning ☐ hypnosis ☐ role playing ☐ thinking games ☐ watching films

Skills taught — fill the gaps

R&R teaches offenders _____ thinking, _____ skills, _____ skills and how to negotiate and get along with others. The main purpose is to equip offenders with the thinking skills to make _____ behaviour choices that will allow them to navigate _____ of a criminal lifestyle.

(critical / social / assertiveness / prosocial / out)

中文理解：Socratic questioning 是什么

苏格拉底式提问 = 治疗师**不直接给答案**，而是一连串追问让对方自己发现矛盾（「你说他是活该——那如果他妹妹遇到同样的事呢？」）。目的：让犯罪者**自己**动摇自己的信念，比被告知「你想错了」更持久。

§5 · Programme 2: Moral Reconation Therapy (MRT)

ANSWERS → p.19

The basics

MRT was established by Greg _____ and Ken _____ (_____). It employs a series of _____ and _____ exercises to target reducing criminal thinking.（Little / Robinson / 1986 / group / workbook）

The assumption it rests on

MRT assumes that criminals have an _____ morality. The treatment is therefore designed to teach _____ reasoning and _____. Offenders are taught about _____ rules and the importance of considering _____.（underdeveloped / moral / judgement / social / others）

How the workbook works

The workbook contains exercises to encourage moral thinking, such as creating an awareness of _____ around criminal activity, and developing _____ to frustration. Because the programme is _____, each offender must complete a series of _____ assignments in order to pass to the next stage.

（beliefs / tolerance / staged / homework）

三分钟分清 R&R 与 MRT

两个都是 CBT、都是小组进行，差别在**练什么**：

· **R&R = 思维技能**（critical thinking、谈判、自信表达）→「想得更清楚」

· **MRT = 道德判断**（对错观、社会规则、考虑他人）→「想得更善良」

记法：R&R 的 R 是 **R**easoning（推理）；MRT 的 M 是 **M**oral（道德）。

§6 · Programme 3: Anger management — the logic

ANSWERS → p.19

Novaco's starting point

Anger management is a common application of CBT for offenders, endorsed by _____ since the _____s. Novaco describes anger as a strong emotion that impacts a person's _____, _____ and _____.（Novaco / 1970 / physiology / behaviour / cognition）

One channel, one technique（对应关系必背）

Channel of anger	Technique taught
physiology（心跳加速、呼吸急促）	_____ techniques
cognition（敌意解读）	_____ to retrain thought patterns
behaviour（吼叫、动手）	_____ or _____ training

（relaxation / cognitive restructuring / time out / assertiveness）

中文理解：为什么愤怒管理「属于」CBT

愤怒管理的核心仍然是第 2 页那条链：**触发事件 → 想法（「她是故意的！」）→ 身体反应 + 攻击行为**。它没有改触发事件，改的是中间的解读（认知重构）和反应方式（放松、暂离、自信表达）——所以它是 CBT 的一个具体应用。

Delivery details

Tick what the textbook says:

☐ prisons or probation in the community ☐ small groups ☐ about _____ sessions ☐ some last months ☐ one-off lecture

§7 · Anger management: the three steps

ANSWERS → p.19

Fill the table in order

Step	What happens
1. _____ preparation **认知准备**	Identify _____ that provoke anger → recognise when an outburst is likely. _____ patterns are challenged (e.g. people are laughing at the _____, not at me). Consider the negative _____ of anger on others.
2. Skill _____ **技能获得**	Learn coping skills: _____, _____, or social skills such as _____ and conflict _____.
3. _____ practice **应用练习**	_____-play a variety of scenarios in _____ environments, so offenders feel safe and _____ individuals are not exposed to risk of harm.

（cognitive · triggers / thought · behaviour · consequences · acquisition · relaxation · avoidance · assertiveness · resolution · Application · Role · controlled · untrained）

The sentence examiners love 一句必背

Anger is a **normal** emotion experienced by everyone — offenders are **not taught to be fearful** of becoming angry; the emphasis is on giving them **skills so they can control** it.

中文：愤怒人人都有，课程不是教你「怕」愤怒，而是给你控制它的技能。写评价题时这句直接能用。

Quick check

Put the three steps in order (write 1, 2, 3):

☐ skill acquisition ☐ application practice ☐ cognitive preparation

§8 · The anger diary, assertiveness and thinking-skills programmes

ANSWERS → p.19

Complete the diary row (based on Table 11.1)

Column	Example
Date	Tues 1 July
Trigger（诱因）	Someone bumped into me and I _____ my coffee
Physiological symptoms	heart _____, fast _____
Angry rating (1–10)	_____ / 10
What I thought（敌意解读）	“How _____ she?” “She did that _____ purpose”
How I dealt with it（旧反应）	I _____ at her and told her to get me another drink

Diaries are completed every time the offender feels angry; with the therapist they learn to recognise their _____ and evaluate which techniques work. Extra columns are added later — a _____ approach, to avoid too many expectations at the start.

(spilt · racing · breathing · 5 · dare · on · shouted · triggers · scaffolding)

Assertiveness — one definition, one contrast

Assertiveness = communicating in a _____, _____ way, to minimise conflict and increase the chance of a positive response. It replaces an _____ style (forceful, threatening, intimidating). Practising and reflecting makes the offender more _____ to keep using the skills in future.

(confident / non-confrontational / aggressive / confident(likely))

Enhanced Thinking Skills (ETS) — the short-term story

Study	Finding
Friendship et al. (_____)	ETS (20-session, juvenile offenders) lowered recidivism in low-, medium- and high-risk offenders
Falshaw et al. (_____)	A _____ of the data showed _____ significant effect
Cann et al. (_____)	Significant effects only after _____ year; gone by _____ years → cognitive training may only have _____-term effects

(2002 / 2003 / reanalysis / no / 2003 / one / two / short)

§9 · The evidence: who found what（证据总表）

ANSWERS → p.20

This table is the single highest-value page in the booklet. Every gap can be asked as “name one study which shows…”.

Programme / claim	Study（名字+年份）	Key finding（填数字或关键词）
R&R meta-analysis, 4 countries (Canada, USA, UK, Sweden)	Tong & Farrington (_____)	R&R reduced reoffending by _____ compared to controls (whose reoffending increased by _____); effective in prison _____ community; volunteers and non-volunteers; more effective with _____ risk offenders; but European studies did not use randomised _____ trials.
MRT	Ferguson & Wormith (_____)	Reoffending reduced by up to a _____ vs no treatment; better for _____ than juvenile offenders; only beneficial in a _____ context.
MRT caveat	Blonigen et al. (_____)	No difference between MRT and usual care in a _____ mental health setting.
CBT overall, meta-analysis of 20 group-oriented studies	Wilson, Bouffard & McKenzie (_____)	Reduced recidivism up to _____ more than controls; _____ and R&R most effective.
CBT beats behavioural techniques	Pearson et al. (_____)	CBT in general had a _____ effect; but specific techniques hard to assess because used _____ other techniques; cognitive skills training & interpersonal problem solving showed a _____ positive effect.
What makes CBT succeed (review of _____ studies)	Lipsey, Landenberger & Wilson (_____)	Only the _____ and _____ of the CBT programme affected success → any CBT programme is beneficial.
Anger management — for whom it works	Howells et al. (_____)	Effective only for offenders _____ to change, committed to the programme.
Anger management — outcome	Ireland (_____)	_____ young male prisoners on the course vs _____ controls; _____% showed improvement; but self-report data — offenders may have an _____ to lie (parole, fewer restrictions).

Exam tip 考试提示

题目常要求 **justify（论证）** 使用 CBT 的合理性——必须落到具体研究证据上，所以这张表要求全部背下。

§10 · Every number 数字收口

COVER THE RIGHT COLUMN

Question	Answer
R&R reoffending reduction vs controls	_____ (controls +16%)
MRT reoffending reduction	up to a _____
CBT overall recidivism reduction (Wilson et al., 2005)	up to _____
Ireland (2004): improvement rate	_____%
Ireland (2004): sample	_____ on course + _____ controls
R&R sessions / length / frequency	_____ × _____ h, _____–_____× per week
Anger management courses last	about _____ sessions (some months)
ETS programme length	_____ sessions
Lipsey et al. review / Wilson et al. meta-analysis sizes	_____ studies / _____ studies
Tong & Farrington countries (name any two)	Canada, USA, UK, Sweden — _____ in total
Novaco endorsed anger management since	the _____s
R&R designer year / MRT designer year	_____ / _____

The three headline numbers, ranked 三个头条数字排序记忆

15%（R&R，Tong & Farrington 2006）< **up to a third**（MRT，Ferguson & Wormith 2013）< **up to 30%**（CBT 整体，Wilson et al. 2005）。

由小到大：单一项目 → 单一项目 → 全部 CBT。范围越宽，数字越大，逻辑自洽。

§11 · Evaluation ① — what speaks for CBT

ANSWERS → p.20

First, what CBT is NOT（辨析题常考）

CBT is _____ a form of counselling: it does not focus on overcoming emotional reactions to difficulties in the _____. The focus is mainly on the _____ thinking of the offender, though past thoughts are acknowledged. CBT does not work _____ — it requires _____ from the offender. As a talking therapy, the offender must talk so the therapist can help them understand their reactions and consider alternatives.

（not / past / present / immediately / commitment）

Strengths — claim → evidence → consequence

Claim	Evidence	Consequence（所以…）
Effective in many settings and groups	Tong & Farrington (2006): prison *and* community; volunteers *and* non-volunteers; all four countries	Findings
Success depends on delivery, not brand	Lipsey et al. (2007): only _____ and _____ of the programme mattered	Any well-delivered CBT programme is
Works for offenders generally	Wilson et al. (2005): up to _____ reduction across 20 studies	CBT is

为什么这些证据「硬」

两个都是 **meta-analysis**（对多项研究的统计合并）——样本量大、跨国家，比单个研究的结论更稳。这一点写进 AO3 能直接加分。

§12 · Evaluation ② — limitations（带后果的批评）

ANSWERS → p.20

Every limitation must carry its consequence — a criticism without “so what?” scores half marks.

Limitation	Detail / evidence	Consequence（后果）
Self-report is unreliable here	Ireland (2004) relied on self-report; offenders have a greater _____ to lie (look good for _____, reduce restrictions)	Reported improvement may be
Only works for a subset	Anger management only fits offenders whose offences stem from anger — not all offences, even violent ones, do; Howells et al. (2005): only the _____ benefit	Effectiveness limited to
Effects may be short-term	Cann et al. (2003): significant after _____ year, not after _____; Falshaw et al. (2003) reanalysis found _____	May need
Context matters	Blonigen et al. (2023): MRT no better than usual care in a _____ mental health setting	Benefit may depend on
Ignores social factors	CBT focuses on thinking but overlooks _____ and _____ — important predictors of reoffending and _____ stressors	A changed mind in an unchanged
Questionable outcome measure	Effectiveness measured by _____ rates; official statistics only count arrest and conviction — _____ crime is missed	CBT may look _____ effective than it is
Unclear what works for whom	Some studies in the meta-analyses showed greater effects than others — _____ variables may moderate the effect	Hard to match offender to
Meta-analysis quality varies	Treatment programmes differ in the _____ of delivery	Pooled results may

（incentive · parole · motivated · one · two · no significant effect · booster/longer support · residential · poverty · employment · environmental · recidivism · unreported · more · moderator · quality）

§13 · Evaluation ③ — wider issues and debates

ANSWERS → p.20

Debate 1: Psychology as a science — the RCT

In a randomised controlled trial, participants are randomly assigned to either the _____ group or the _____ group. Random allocation is _____ — without it, _____ variables may prevent cause-and-effect conclusions, so we cannot be sure improvements came from the treatment.

（treatment / control / essential / participant）

应用：Tong & Farrington 自己承认，meta-analysis 里的欧洲研究没有用 RCT —— 这正是他们结论的一处软肋，可以写进 AO3。

Debate 2: Gender bias

Data mostly concerns _____ offenders (the largest group of convicted criminals in the UK). Biological explanations like _____ levels or _____ syndrome explain male offending but not female. Structured programmes were designed _____ men in mind, so may not reflect the needs of female offenders.

（male / testosterone / XYY / with）

中文理解：两场辩论为什么「配得上」6 分

它们都不是「再补一条缺点」，而是质疑整个研究**范式**：

· **RCT 辩论**：不随机分组 → 组间本来就不等 → 疗效可能是「选出来的」而不是「治出来的」。

· **性别偏见**：证据库几乎全男性 + 项目为男性设计 → 对女性犯罪者既**不知道**是否有效，也**未必**适合。结论的可推广性（generalisability）被砍掉一半。

Command words 指令词对照

Command word	What you must actually do
describe	Give the features of a programme in order — no evaluation needed (e.g. the three steps of anger management)
explain	Give the mechanism: because distorted thinking is learned, it can be retrained → behaviour becomes prosocial
evaluate / assess	Claim + evidence + consequence, both sides, then a judgement
justify（考试 tip 点名）	Argue *for* CBT using **named study evidence** — e.g. Tong & Farrington (2006) 15%, Wilson et al. (2005) 30%

Sentence frames 句子骨架

- CBT assumes offending is linked to **distorted thinking**, which is **learned** and can therefore be **restructured**…
- Supporting this, **study (year)** found that **figure**, which suggests…
- However, this evidence is limited because **criticism**, meaning that **consequence**…
- Overall, CBT is effective provided that **condition** (e.g. motivation, amount and quality of delivery).

The three programmes — one-line recall drill

Programme	One line（默写）
R&R (Ross & Fabiano, 1985)	
MRT (Little & Robinson, 1986)	
Anger management (Novaco)	

§15 · Practice A — short answers（先自己写，再对答案）

ANSWERS → p.20

A1. Outline what is meant by cognitive behavioural therapy (CBT) for offenders. (3)

论点提示：premise 链 + insight + 改变后的目标。

A2. Describe the three steps of anger management. (6)

论点提示：每步 2 分 = 命名 + 展开一句（触发识别/技能举例/受控角色扮演）。

A3. Explain one difference between the R&R programme and Moral Reconation Therapy. (3)

论点提示：R = reasoning（思维技能）vs M = moral（道德判断）；各给一个例子。

A4. State two findings from Ireland (2004). (2)

自评标准

每个论点 = 1 个具体名词 + 1 个具体细节。写完先对 p.20 答案，再回来补全句子。

§16 · Practice B — the evaluation answer

ANSWERS → p.20

> *"CBT is an effective therapy for offenders." Discuss. In your answer you should describe and evaluate the use of CBT with offenders. (8)*

Plan first — fill the skeleton

For（证据 + 数字）	Against（批评 + 后果）
1.	1.
2.	2.
3.	3.

Judgement（一句话收尾，写在线上）：

评分要点 AO1 4 分 / AO3 4 分

· AO1：R&R、MRT、anger management 各一句 + 至少一个机制（learned thinking → restructured）。

· AO3：每条批评必须带**后果**（"so the evidence may overstate…"）；最后必须有**有条件的结论**（effective if motivated / well-delivered）。

§17 · Final check — five minutes, from memory

NO NOTES

Rapid recall

1. The four thinking distortions: _____
2. R&R: designer + year + country: _____
3. MRT assumption: _____
4. Anger management's three steps in order: _____
5. Three channels of anger + matching techniques: _____
6. Three headline numbers with their studies: _____
7. Howells et al. (2005) finding: _____
8. One reason recidivism statistics overstate success: _____
9. What CBT is NOT (and what it focuses on instead): _____
0. The social factors CBT overlooks: _____

Brain dump 一句话版本

Thinking is learned → thoughts drive behaviour → retrain the thinking (R&R skills / MRT morals / anger skills) → reoffending falls 15%–30%, but only for the motivated, and only if we also fix poverty and jobs.

Answer key location

All blanks in this booklet are answered on **pp. 19–20**. Mark each page as you finish it, and re-write anything wrong in full.

p.2 treatment; deterrent; root; consequences; does NOT; forensic; community; prison; risk of future reoffending.

p.3 thoughts / cognitive / behaviour / behavioural. Prosocial = behaviour that takes account of the welfare of others and avoids harming others deliberately. Cognitive restructuring = identifying and challenging maladaptive/negative thinking patterns and replacing them with more objective and adaptive ones. Delivery: individual with a therapist ✓, group with a therapist guiding discussion ✓, community or prison ✓ (NOT only one-to-one).

p.4 Beck; learned. Distortions: 1 displacing the blame; 2 justifying their offending; 3 misinterpreting social cues as potential threats; 4 schemas (self-dominance and personal entitlement). Aims order: identify and restructure → develop victim empathy → challenge self-justifying.

p.5 Canada; Ross; Fabiano; 1985. 36 sessions; 2 hours; 2–4 times per week; group sessions. Activities: group discussions ✓, Socratic questioning ✓, role playing ✓, thinking games ✓ (NOT hypnosis or films). critical; social; assertiveness; prosocial; out.

p.6 Little; Robinson; 1986; group; workbook. underdeveloped; moral; judgement; social; others. beliefs; tolerance; staged; homework.

p.7 Novaco; 1970s; physiology; behaviour; cognition. relaxation techniques; cognitive restructuring; time out / assertiveness training. Delivery ✓: prisons or probation in the community; small groups; ~10 sessions; some last months (NOT one-off lecture).

p.8 cognitive preparation: triggers; Thought; behaviour; consequences. Skill acquisition: relaxation; avoidance; assertiveness; resolution. Application practice: Role; controlled; untrained. Order check: cognitive preparation = 1, skill acquisition = 2, application practice = 3.

p.9 spilt; racing; breathing; 5; dare; on; shouted; triggers; scaffolding. Assertiveness: confident; non-confrontational; aggressive; confident/likely. ETS: Friendship et al. 2002; Falshaw et al. 2003 (reanalysis; no significant effect); Cann et al. 2003 (one year; two years; short-term).

p.10 evidence table Tong & Farrington (2006): 15%; +16%; and; low risk; randomised controlled. Ferguson & Wormith (2013): a third; adults; prison. Blonigen et al. (2023): residential. Wilson, Bouffard & McKenzie (2005): 30%; MRT. Pearson et al. (2002): positive; alongside; modest. 58 studies; Lipsey, Landenberger & Wilson (2007): amount; quality. Howells et al. (2005): motivated. Ireland (2004): 50; 37; 92%; incentive.

p.11 numbers 15% · third · 30% · 92% · 50 + 37 · 36 × 2 h, 2–4×/week · 10 sessions · 20 sessions · 58 / 20 · 4 · 1970s · 1985 / 1986.

p.12 not; past; present; immediately; commitment. Strengths consequences (any wording): findings generalise widely / any well-delivered programme is beneficial / CBT is an effective treatment overall.

p.13 incentive; parole → improvement may be exaggerated. motivated → limited to angry, motivated offenders. one; two; no significant effect → may need booster or longer support. residential → depends on setting. poverty; employment; environmental → changed mind in unchanged environment. recidivism; unreported → more effective than it is. moderator → hard to match offender to programme. quality → pooled results may mislead.

p.14 treatment; control; essential; participant. male; testosterone; XYY; with.

p.15 one-liners (model) R&R: 36 group sessions (2 h, 2–4×/week) teaching critical thinking, social and assertiveness skills to make prosocial choices. MRT: staged group + workbook exercises teaching moral reasoning, assuming criminals' morality is underdeveloped; homework to advance. Anger management: Novaco's 3-step CBT — cognitive preparation, skill acquisition, application practice — teaching control of a normal emotion.

p.16 A1 CBT helps offenders develop insight into their thoughts and feelings and how these influence behaviour; it works on the premise that thoughts about a situation influence reactions, and changing distorted thoughts makes behaviour more prosocial. **A2** cognitive preparation — identify triggers, challenge thought patterns, consider consequences; skill acquisition — relaxation, avoidance, assertiveness, conflict resolution; application practice — role-play scenarios in controlled, safe environments. **A3** R&R teaches thinking/social skills (critical thinking, negotiation); MRT teaches moral reasoning via a staged workbook — one targets how offenders reason, the other what they judge as right. **A4** 92% of prisoners improved; course group of 50 vs 37 controls.

p.17 B — model judgement “CBT reduces reoffending substantially (15%–30% across meta-analyses), but effectiveness is conditional: it requires motivated offenders, adequate amount and quality of delivery, and should be combined with help for social factors such as poverty and employment.”
