

Chapter 7 — Explanations for Criminal and Antisocial Behaviour

Student Notes Workbook · 学习笔记工作册

Self-Fulfilling Prophecy · Social Learning from the Media · Antisocial Personality Disorder

Name 姓名: _____

Class 班级: _____

Start date: _____

How to use this workbook 使用方法

1. **Read one section** of the courseware, then fill in the matching workbook page. 边读课件边填空，不要一口气填完。
2. **Numbers are gold.** Every theory page asks for the key numbers (22% vs 6.9% · +0.19 · 38%/56% · 43 scans) — examiners reward them. 数字是采分点。
3. **Check answers** on the last page and tick the tracker below. 对答案并打卡。每页右上角标有对应课件章节。

Syllabus map — what the exam can ask 大纲考点 (spec 6.1.1)

Syllabus	Content 内容	Workbook pages
Theory 1	SFP Self-fulfilling prophecy — Rosenthal & Jacobson (1968) · Jahoda (1954)	pp. 3–5
Theory 2	SLT Social learning from the media — Bandura Ross & Ross (1963) · Williams (1986) · Comstock & Paik (1994)	pp. 6–8
Theory 3	ASPD Antisocial personality disorder — Hodgins & Côté (1993) · twin studies · Yang & Raine (2009)	pp. 9–11
Compare	Three theories side by side — nature vs nurture stances	p. 11
Exam skills	Describe (AO1) · Justify with evidence (AO3) · 8-mark application essay (AO2/AO3)	p. 12
Self-test	Brain dump from memory · sentence patterns · answer key	pp. 13–14

Exam format 考试形式: Paper 3 Section B — describe questions need **accurate detail + numbers**; 'justify' questions need a **named study used as evidence**. Generic answers score low marks.

Review tracker 复习打卡

- ☐ First pass — all blanks filled 第一遍填完 Date: _____
- ☐ Three theories each summarised in one sentence from memory 每个理论一句话默写 Date: _____
- ☐ Answer key checked — corrections in pen 对过答案并用笔订正 Date: _____
- ☐ Brain dump page done from memory 合上笔记完成自测页 Date: _____

The one-line map of the whole chapter 全章地图

This chapter gives you **three competing explanations** (三种竞争性解释) for why people offend. Each one is a different lens on the same question — remember the主线:

① **SFP** 社会贴标签 (people become what others expect) → ② **SLT** 看来的 (people copy what they observe) → ③ **ASPD** 天生的 (personality and biology load the risk).

Getting started — your own list 开局思考

List five different types of crime, then write one possible reason why people commit each. 犯罪类型 + 原因各写一条。

Type of crime 犯罪类型	One possible reason 原因
1.	
2.	
3.	
4.	
5.	

(Explaining crime is hard because the reasons are many: some social or economic 社会的或经济的, some mental disorders 精神障碍, some biological 生物的. One crime may have several reasons at once.)

Criminal vs antisocial behaviour — fill in the table 填空对比

	Criminal behaviour 犯罪行为	Antisocial behaviour 反社会行为
Definition	You _____ (break the law 违反法律)	Causes _____, _____ or _____ to others — _____ (not in itself illegal 本身并不违法)
Examples	_____, assault, _____ (theft / fraud 等)	Excessive noise, not controlling animals, intimidating others, _____ (hoax calls 恶作剧电话)
Consequence (UK)	_____ (prosecution 起诉)	An _____ (antisocial behaviour order 反社会行为令) listing what you cannot do

The Wednesday-boy teaser 星期三男孩伏笔

In Ghana, some boys are named after the **day of the week** they were born on. Wednesday boys (*Kwadu*) are expected to be _____ (aggressive and short-tempered 好斗急躁); Monday boys are expected to be _____ (quiet and placid 安静温和). In juvenile court records, _____ % of violent offences were committed by Wednesday boys, but only _____ % by Monday boys.

记住这两个数字——p.4 学完 SFP 你就能解释它们为什么出现。

Key term 填空

Self-fulfilling prophecy (自证预言) : a theory explaining that a behaviour may result from a _____ (belief or expectation 信念或期待) someone has. This expectation influences a person's behaviour in such a way that it _____ (causes the expectation to come true 期待最终自我实现) .

The process — number the steps 1–4 排序

Order	Step
	The person begins to internalise the label (把标签内化) and eventually acts in a way consistent with it — they fulfil the prophecy.
	A false expectation is believed about a person, so they are labelled as a particular type of person.
	The person is treated differently (被区别对待) according to the label; behaviour inconsistent with it is ignored .
	Being treated differently, the person may be isolated from normal society and drawn into criminal groups.

Applied to criminal behaviour — fill the chain 填空

A person is **falsely labelled** as criminal or antisocial → people treat them with _____ (suspicion or caution 怀疑与戒备) → good behaviour that doesn't fit the label is _____ (ignored 被忽视) → they become isolated and are drawn into _____ (criminal groups 犯罪团伙) → they internalise the label and cause trouble **because it is** _____ (expected of them 被期待如此) → once they offend, the expectation is _____ (confirmed 被证实) .

Nature–nurture stance 天性 vs 教养立场

SFP is a _____ (nurture 教养) explanation: people become criminal *because of the way people* _____ (treat 对待) *them* — e.g. a child from an antisocial family is expected to offend and treated accordingly. But it _____ (ignores 无视) innate influences such as brain functioning or _____ (genetics 遗传) .

这个立场是评价题的固定采分点：纯 nurture 视角 → 忽略先天因素。

Rosenthal & Jacobson (1968) — the "Bloomers" study

Setting	An academic setting in _____ (San Francisco 旧金山), USA.
What they did	Some students were labelled as academic _____ (bloomers 快开之花) with great potential. In fact students were allocated to this group _____ (randomly 随机分配), not by intelligence.
Duration & measure	The study ran for _____ (a year 一年), measuring _____ at the start and end.
What they found	The IQ of 'bloomers' was significantly _____ (higher 更高) than non-bloomers — even though bloomers were not necessarily the highest IQ at the start .
Conclusion	Teachers' _____ (expectations 期待) influenced their _____ (behaviour towards students 对学生的行为), and it was this that changed the IQ scores.

Jahoda (1954) — the Ashanti day-names study

Who & where	The _____ (Ashanti 阿散蒂族) people of _____, who name boys according to the _____ (day they were born 出生的星期).
The labels	'Monday' boys are considered _____ (quiet and placid); 'Wednesday' boys are thought to be _____ (aggressive and short-tempered).
Evidence source	_____ (five years 五年) of records at a local _____ (juvenile court 少管所法庭).
Key numbers	Nearly _____ % of violent offences by Wednesday boys vs _____ % by Monday boys.
Conclusion	Cultural _____ (expectations 期待) and explicit labels led to different _____ (treatment 待遇) (e.g. Wednesday boys treated with greater _____ (suspicion 怀疑)) — many conformed to the label set by their namesake.

Pair the studies 配对记忆

Rosenthal & Jacobson = 教室里的期望 (IQ 变了) — —proves the chain expectation → treatment → behaviour change, but in *education*, not crime.

Jahoda = 名字里的期望 (犯罪记录变了) — —the one study that links the chain directly to *antisocial behaviour*.

考试问 *who found a link between violent offending and the day of the week they were born?* — 答
_____ (Jahoda (1954)).

任何一道 *evaluate self-fulfilling prophecy* 的题，下面三条骨架都适用。填空后各配一句自己的话，就是完整的 AO3 段落。

The three-sentence skeleton 三句答题骨架

#	Argument	Fill in the missing reasoning 补全推理
① 证据薄	The evidence base is thin for <i>crime</i>	There is no proven direct link between _____ (IQ 智商) (Rosenthal & Jacobson) and criminality — most SFP research is in _____ (education 教育), and the criminal claim rests almost entirely on one study: _____ (Jahoda (1954)).
② 方法限	Ethics forbid experiments → correlation only	Intentionally _____ (labelling 贴标签) children to cause antisocial behaviour would be unethical, so experiments are prevented — only _____ (correlation 相关) can be shown, and other _____ (variables 变量) can never be ruled out.
③ 视野窄	It ignores other explanations	Biological factors (brain functioning, _____ (genetics 遗传)), peer pressure, politics and social or economic _____ (circumstances 环境) are all ignored — the theory is too narrow on its own.

Two more evaluation points to have ready 两条备用评价

Point	The evidence (fill in)
Ethical problems in the supporting study	Rosenthal & Jacobson allowed some students to _____ (receive less attention 得到更少关注) than others, interfering with their education; teachers were _____ (deceived 被欺骗).
False beliefs are hard to study	SFP is by definition a _____ (false belief 错误信念); beliefs are studied with _____ (self-report 自我报告) measures, which rely on insight, self-disclosure and _____ (honesty 诚实).

Exam practice — write a full AO3 paragraph 写一段完整评价

"Evaluate the self-fulfilling prophecy as an explanation of criminal behaviour." (4)

要求：一条 weakness + 一句研究证据 + 一句 why it matters.

Key terms 填空

Social learning theory (社会学习理论) : a _____ (social-cognitive 社会认知) theory that explains criminal behaviour as the result of _____ (modelling such behaviour from observing it via the media or watching other people 模仿观察到的行为) .

Vicarious (替代的/间接的) : learning through the _____ (consequence of another person's behaviour 另一个人行为的后果) .

Core claims — fill in 填空

- An individual **cannot learn offending behaviour without** _____ (**observing** 观察) **someone commit a crime** — either **directly** (a peer) or **indirectly** (crime-related _____ (TV programmes 电视节目)).
- Reproduction is motivated by **vicarious reinforcement** (替代强化) : watching a criminal _____ (get away with an offence or reap rewards 逃脱惩罚或得到好处) .
- On TV, criminals are often **glamorised** (被美化) — violence committed by ' _____ (good guys 好人) ' — and victims' suffering is _____ (sanitised 被淡化) , with punishment absent.
- Media criminals act as **role models** (榜样) : often have _____ (power 权力) , or are the _____ (same gender as us 与我们同性别的) .
- The theory also has a **cognitive** component: someone may _____ (choose not to commit a crime immediately 延迟模仿/不马上模仿) — and news showing negative consequences may discourage imitation.

Activity 1 — Apply the key terms to shoplifting 课本活动 (自己写)

(Example given: a teenager observed a friend shoplifting from a store. Fill in each box in your own words — this is AO2 application practice.)

Key term	What it would look like in this example
Retention (remembering the behaviour)	_____
Role model (higher status, same gender, looked up to)	_____
Reproduction (copying the witnessed behaviour)	_____
Vicarious reinforcement (seeing the model rewarded / unpunished)	_____

Bandura, Ross & Ross (1963) — the lab experiment

What they did	Children watched a video of adults behaving aggressively towards a _____ (Bobo doll 充气不倒翁玩偶) .
Finding 1	Children _____ (copied the aggression 模仿了攻击行为) they had watched.
Finding 2	Children were equally likely to copy aggression from a _____ (cartoon 卡通) version where the adult was dressed as a black _____ (cat 猫) .
Limitation	The _____ (long-term 长期) impact of witnessing aggression was _____ (not followed up 未追踪) .

Tannis MacBeth Williams (1986) — the town that got TV

Design	A _____ (natural experiment 自然实验) on the introduction of television to a small community in _____ (British Columbia, Canada) .
Sample	_____ (16) young people, compared with two _____ (control 对照) groups in nearby communities.
Finding	After only _____ (two 两年) years of TV, the children were _____ (twice as aggressive 攻击性翻倍) as the controls.
Williams' own caution	The aggression was more likely due to the increased value placed on _____ (materialistic lifestyles 物质至上生活方式) than to TV violence.

Comstock & Paik (1994) — the meta-analysis

Method	A _____ (meta-analysis 元分析) of _____ (correlational 相关) studies.
Finding	Many studies reported a _____ (positive 正) correlation between TV violence and aggression measures.
Key number	Overall correlation coefficient $r =$ _____ (+0.19) — not particularly strong , and inflated by large _____ (sample sizes 样本量) making weak effects look significant.

The cooling ladder of evidence 证据的降温阶梯

Bandura = 实验室里小孩确实模仿（连卡通猫都模仿）→ **Williams** = 真实社区通了电视后攻击性翻倍（但她自己归因于物质主义价值观）→ **Comstock & Paik** = 大规模相关只有 _____（弱相关，还被大样本"吹"显著）。

记住 +0.19：写 "a weak correlation of only +0.19 (Comstock & Paik, 1994)" 立刻显得有据可依。

The three buckets of cold water 三盆冷水

Evaluation point	Fill in the reasoning 补全推理
① 方向不明 The causation may run backwards	It could be that _____ (aggressive children seek out and prefer violent programmes 好斗的孩子主动选择暴力节目) — the direction of cause and effect is _____ (unknown 未知). The media may reflect pre-existing aggression rather than create it.
② 第三变量 Third variables explain criminality better	Social class (Flood-Page et al., 2000): children from lower socio-economic groups watch more _____ (delinquent 违法倾向) TV and are more likely to be delinquent. Also personality — _____ (sensation seeking 寻求刺激) (Slater et al., 2004) — and _____ (ASPD 反社会人格障碍). These could each produce both the TV habits and the behaviour.
③ 效应弱 The correlation is weak and inflated	$r = \underline{\hspace{2cm}}$ leaves ~96% of the variance unexplained; correlations do not establish _____ (causality 因果), measure other variables, or indicate _____ (direction 方向).
Lab finding ≠ real life	Bandura's long-term impact was _____ (not followed up 未被追踪) — copying a bobo-doll punch in a lab is a long way from a _____ (criminal career 犯罪生涯).

The textbook's cautious conclusion — learn this wording 课本的谨慎结论

Despite a phenomenal amount of research using a range of methods, there is **no convincing evidence** that criminality results from observational learning, and **no unequivocal evidence** links exposure to violence with aggression — the relationship is **neither simple nor straightforward**.

8 分作文里，把这个 balanced verdict 放在结尾当 AO3 conclusion — 敢于写「证据不支持强结论」比硬吹理论更能拿分。

Exam practice — AO3 paragraph 写一段评价

"Evaluate social learning theory as an explanation of criminal behaviour." (4) — 选两条冷水，各写 Point + Evidence + Why。

Key terms 填空

Personality disorder (人格障碍) : an individual's way of _____ (thinking, feeling or relating to others 思考、感受或与人相处) differs significantly from normal — extremes of personality; requires a _____ (clinical diagnosis 临床诊断) .

Comorbidity (共病) : the presence of _____ (more than one disorder in the same person 同一人身上有多种障碍) .

The seven diagnostic characteristics — tick and translate 勾选并配中文

(A diagnosis requires **three or more**. Fill in the Chinese gloss for each.)

	Characteristic	中文
☐	Disregard for social rules / lawful behaviour — harassment, stealing	_____
☐	Deceit and manipulation — lying, aliases, conning for gain	_____
☐	Impulsivity / failing to plan ahead	_____
☐	Aggression and irritability — getting into fights	_____
☐	Reckless disregard for own or others' safety — reckless driving	_____
☐	Irresponsible behaviour — failing work or financial obligations	_____
☐	Lack of remorse for wrongdoing or harm	_____

Diagnosis rules — fill in the numbers 诊断规则填空

Diagnosis requires _____ (3 三) or more of the 7 characteristics. **Not diagnosed until age** _____ (18 十八岁), but evidence of **conduct issues before age** _____ (15 十五岁) must be seen. Prevalence in the general population: _____ (1–4% (Lenzenweger 2007)) — much higher in prison / substance-abuse subgroups, much more common in _____ (males 男性) (possibly under-diagnosed in females because the criteria emphasise aggression). To be clinically diagnosed, the characteristics must be _____ (僵化的), _____ (持续的) and cause significant _____ (impairment 功能损害) .

Activity 2 — Link each behaviour to a characteristic 课本活动连线

Behaviour	Characteristic (write it out)
Tamara screams aggressively at neighbours whenever they walk by	_____
Sanya plays music very loudly and insults people who ask her to turn it down	_____
Demi steals money from her mother's purse	_____
Ruthie lies to her teachers	_____
Lola regularly fails to show up for work	_____

Layer 1 — Behaviour: Hodgins & Côté (1993)

Compared offenders **with** ASPD and **without**. Findings: offenders with ASPD had a significant history of _____ (offending during childhood 童年犯罪史) and _____ (more convictions in adulthood 成年后更多定罪) than offenders without ASPD → the disorder leads to a strong _____ (risk 风险) of offending.

Layer 2 — Genes: the twin and meta-analysis evidence

Study	Design & sample	Heritability 遗传度
Torgersen et al. (2008)	_____ (1386) Norwegian twin pairs, structured interview vs DSM-IV criteria	_____ (38%) of twin variation
Mason & Frick (1994)	_____ twin and _____ (12 / 3 十二项双生子+三项收养研究) adoption studies	_____ (over 50%) of variance
Ferguson (2010)	38 studies (1996–2006), combined sample _____ (96,918) participants	_____ (56%) of variance

(三个数字像记比分一样记牢: 38% → 50%+ → 56%。)

Layer 3 — Brain: Yang & Raine (2009)

A _____ (meta-analysis 元分析) of _____ (43) brain-scanning studies (structural and functional) found significantly _____ (reduced grey matter 灰质减少) and reduced function in the _____ (prefrontal cortex 前额叶皮层) of individuals displaying antisocial behaviour. The prefrontal cortex is known to _____ (moderate aggression 调节攻击性) — impairment there may explain antisocial behaviour. The impairment could be _____ (inherited 遗传的) or acquired through _____ (brain damage 脑损伤). Other differences found: the _____ (amygdala 杏仁核) and _____ (temporal lobe 颞叶).

Command word — 'justify' 指令词

'Justify' = _____ (rationalise a decision 用理由为判断辩护). The best way to justify whether a theory is credible is to _____ (offer evidence in the form of a research study 甩出一个具体研究) that supports it. 甩 Ferguson (2010) 或 Yang & Raine (2009) 就是满分动作。

Evaluating ASPD — the key idea: risk, not destiny 关键观念：风险 ≠ 必然

Point	Fill in the reasoning 补全推理
Childhood roots (strength)	Simonoff et al. (2004): _____ (225) childhood twin pairs diagnosed with _____ (conduct disorder 品行障碍) — this predicted _____ (ASPD in adulthood 成年反社会人格障碍) 10–25 years later. Implication: early identification and _____ (intervention 干预) programmes could prevent later offending.
Comorbidity (weakness)	Diagnosis is problematic because of high _____ (comorbidity 共病) (anxiety, depression, substance misuse, ADHD). Environmental factors — adverse childhood, low socio-economic class, urban living — may produce protective strategies that <i>resemble</i> ASPD → some diagnoses may be _____ (misdiagnosed 误诊) (false positives).
Elevated risk, not inevitability	Some people with ASPD never offend and live functional lives — risk varies with severity of symptoms, comorbid conditions (ADHD, substance misuse) and _____ (upbringing 教养). Treating ASPD as deterministic loses balance marks.
Genes load the gun, not the trigger	Even the highest heritability figure (56%) leaves a substantial share to the _____ (environment 环境); and brain evidence is _____ (correlational 相关的) — reduced prefrontal function could be cause or _____ (result 结果) of lifestyle.

Three theories side by side — fill in from memory 三理论对比默写

	SFP	SLT	ASPD
Type of explanation	_____ (social 标签)	_____ (观察学习)	_____ (personality/biological)
Key evidence	Jahoda (1954) _____ % vs _____ %	Bandura (1963); Williams (1986); $r =$ _____	Ferguson (2010) _____ %; Yang & Raine _____ scans
Biggest weakness	_____ (no direct crime link / correlation only)	_____ (no convincing causal evidence)	_____ (comorbidity; risk not destiny)
Nature–nurture stance	_____	_____	_____
One-liner	"The _____ becomes the behaviour."	"They learned it from a _____."	"The _____ were missing from birth."

Q1a (AO1, 4 marks) — Describe antisocial personality disorder (ASPD) as an explanation of criminal and antisocial behaviour.

(至少覆盖: persistent disregard for others' rights + 3+ of 7 characteristics + before-15 / from-18 规则 + prevalence 1–4%。)

Q1b (AO3, 2 marks) — Justify how ASPD can be considered a credible explanation of criminal and antisocial behaviour.

('Justify' = 甩一个带数字的研究 (Ferguson 96,918 人 / 56%, 或 Yang & Raine 43 项脑扫描)。)

Q2 (AO3, 2 marks) — Justify self-fulfilling prophecy as an explanation for crime and antisocial behaviour.

(Jahoda 22% vs 6.9%, 或 Rosenthal & Jacobson bloomers。)

Q3 (AO2/AO3, 8 marks) — Lucia enjoys playing violent video games... recently won an online competition for being the most successful player and winning fights. His parents notice he is becoming more aggressive at home, fighting with his younger brother, and getting into trouble at school for fighting in the playground. **Discuss how social learning theory could account for Lucia becoming aggressive.**

Plan first — fill the seven-move skeleton 先填提纲再写

Move	Your keywords
1. Define SLT (AO1)	_____
2. Observation — what does Lucia observe?	_____
3. Vicarious reinforcement — what reward?	_____
4. Role model identification — who/what is the model?	_____
5. Reproduction — where is it reproduced?	_____
6. Evaluation — supporting study + weakness	_____
7. Conclusion — one balanced sentence	_____

(提纲填好后, 把 7 步串成完整 essay 写在答题纸上 (自己另附纸)。)

- SFP — the four-step process in order:
- Jahoda — which country, which labels, which two numbers:
- Rosenthal & Jacobson — who was labelled, how chosen, what changed over one year:
- SFP evaluation — the three-sentence skeleton (证据薄 / 方法限 / 视野窄):
- SLT — the five key terms applied to shoplifting:
- Williams (1986) — design, sample, finding, her own alternative explanation; Comstock & Paik — method and the one number:
- SLT evaluation — the three buckets of cold water:
- ASPD — the three diagnosis rules and prevalence:
- ASPD evidence — the three heritability numbers and whose studies; Yang & Raine — how many scans, which brain area, what it does:
- Simonoff (2004) — sample, what predicted what, over how many years:

Exam sentences to memorise 背下来的句式

When asked...	Sentence pattern 句式
Describe ASPD (4)	"ASPD is a _____ disorder characterised by a persistent disregard for _____; diagnosis requires _____ of seven characteristics, with evidence of conduct issues before age _____."
Justify a theory (2)	"The theory is credible because _____ (study) found _____, which supports the claim that _____."
Apply SLT (8)	"Lucia _____ the fighting (observation), and because he was _____ for winning (vicarious reinforcement), he was motivated to _____ the behaviour at home and school (reproduction)."
Evaluate any theory (4)	"A weakness is _____ because _____ (study), which means _____."

Final self-check 最后自问

合上笔记，能否在 10 分钟内默写出：① Jahoda 22% vs 6.9%? ② Comstock & Paik +0.19? ③ 38% / 50%+ / 56% 三个遗传度数字和对应研究者? ④ ASPD 诊断三规则 (3+7 条 / 15 岁前 / 18 岁起)? ⑤ 三个理论各自的 nature-nurture 立场? 卡住就回课件对应章节重看。

p.2 — 犯罪: break the law; 反社会: harassment · alarm · distress · not in itself illegal; 例子: theft / fraud 等 vs hoax calls; 后果: prosecution vs antisocial behaviour order. Wednesday 男孩: aggressive and short-tempered · Monday: quiet and placid · 22% vs 6.9%。

p.3 — Key term: belief or expectation · causes the expectation to come true. 排序: ②false expectation labelled → ③treated differently/ignored → ④isolated/drawn into criminal groups → ①internalise/fulfil (即 2,3,4,1 对应表行顺序为 4/1/2/3)。链条: suspicion or caution · ignored · criminal groups · expected of them · confirmed。Nature–nurture: nurture · treat · ignores · genetics。

p.4 — R&J: San Francisco · bloomers · randomly · a year · IQ · higher · expectations · behaviour towards students. Jahoda: Ashanti · Ghana · day they were born · quiet and placid · aggressive and short-tempered · five · juvenile court · 22 · 6.9 · expectations · treatment · suspicion。配对: Jahoda (1954)。

p.5 — ① IQ · education · Jahoda (1954)。② labelling · correlation · variables。③ genetics · circumstances。伦理: receive less attention · deceived。信念难研究: false belief · self-report · honesty。4 分段范例要点: 先 Point (no direct link to crime) + Evidence (R&J 是教育研究; 直接证据仅 Jahoda 一个) + Why (evidence base thin → 不能下强结论)。

p.6 — social-cognitive · modelling such behaviour from observing it via the media or watching other people · consequence of another person's behaviour。核心: observing · TV programmes · get away with an offence or reap rewards · good guys · sanitised · power · same gender · choose not to commit a crime immediately。Activity 1 参考: retention = 记住朋友如何藏商品走过收银台; role model = 朋友——同龄、认同、地位更高, 比陌生人更可能被模仿; reproduction = 之后用同样方式偷窃; vicarious reinforcement = 朋友逃脱惩罚还得了好处 → 偷窃显得值得。

p.7 — Bandura: Bobo doll · copied the aggression · cartoon · cat · long-term · not followed up。Williams: natural experiment · British Columbia, Canada · 16 · control · two · twice as aggressive · materialistic lifestyles。Comstock & Paik: meta-analysis · correlational · positive · +0.19 · sample sizes。降温阶梯数字: +0.19。

p.8 — ① aggressive children seek out and prefer violent programmes · unknown。② delinquent · sensation seeking · ASPD。③ +0.19 · causality · direction。实验室局限: not followed up

· criminal career。课本结论措辞: no convincing evidence / no unequivocal evidence / neither simple nor straightforward。

p.9 — 人格障碍: thinking, feeling or relating to others · clinical diagnosis。共病: more than one disorder in the same person。七特征中文: 无视规则与法律 · 欺骗与操纵 · 冲动性 · 攻击与易怒 · 鲁莽无视安全 · 不负责任 · 缺乏悔意。诊断: 3 · 18 · 15 · 1–4% · males · inflexible · persistent · impairment。Activity 2: Tamara → aggression and irritability; Sanya → disregard for social rules (harassment); Demi → deceit (stealing for gain); Ruthie → deceit and manipulation (lying); Lola → irresponsible behaviour (failing work obligations)。

p.10 — Hodgins & Côté: offending during childhood · more convictions in adulthood · risk。双生子: 1386 · 38% · 12 / 3 · over 50% · 96,918 · 56%。Yang & Raine: meta-analysis · 43 · reduced grey matter · prefrontal cortex · moderate aggression · inherited · brain damage · amygdala · temporal lobe。Justify: rationalise a decision · offer evidence in the form of a research study。

p.11 — Simonoff: 225 · conduct disorder · ASPD in adulthood · intervention。共病: comorbidity · misdiagnosed。风险: environment · upbringing · correlational · result。对比表: SFP = social/environmental 标签; SLT = social-cognitive 观察学习; ASPD = personality/biological。证据: 22 vs 6.9 · +0.19 · 56% · 43。弱点: no direct crime link, correlation only · no convincing causal evidence · comorbidity; risk not destiny。立场: SFP strong nurture; SLT mostly nurture + cognitive; ASPD both (genes + environment)。One-liners: label · screen · brakes。

p.12 — Q1a 采分点: personality disorder + persistent disregard for the rights of others + 3+ of 7 characteristics (列出任三条) + before 15 / from 18 + prevalence 1–4% (Lenzenweger) + 更常见于男性。Q1b: Ferguson (2010) 38 项研究、96,918 人、遗传解释 56% 方差 → 大样本、可复现的证据基础 → credible; 或 Hodgins & Côté / Yang & Raine。Q2: Jahoda 22% vs 6.9% (标签→不同待遇→趋同标签); 或 R&J bloomers 随机标签后 IQ 显著提高。Q3 七步: ① 定义 SLT ② 观察: 游戏中的打斗 ③ 替代强化: 赢比赛获奖励、无惩罚 ④ 榜样认同: 游戏角色强大、“赢家”位置 ⑤ 再现: 在家打弟弟、在操场打架 ⑥ 评价: Bandura 支持 (连卡通都模仿) 但 Comstock & Paik 仅 +0.19、第三变量 (家庭/挫折) 可能解释 ⑦ 结论: SLT 是 plausible 但 not definitive 的解释。

p.13 — 句式填空: ① personality · others' rights · 3+ · 15 ② (study) · (finding with number) · (mechanism linking to the claim) ③ observes · rewarded · reproduce ④ X · study evidence · implication。

最后提醒: Ch7 的采分点是「理论 + 数字 + 证据」三件套。22% vs 6.9% · +0.19 · 38%/56% · 43 scans · 3+7 条 / 15 岁 / 18 岁——把这九组数字背到像记比分一样熟, describe 和 justify 题就稳了。评价题永远「承认强度 + 指出裂缝」。
