

Chapter 20 — Classical & Operant Conditioning and Social Learning Theory

Student Notes Workbook · 学习笔记工作册

Classical Conditioning · Operant Conditioning · Social Learning Theory

Name 姓名: _____

Class 班级: _____

Start date: _____

How to use this workbook 使用方法

1. **Read one section** of the courseware, then fill in the matching workbook page. 边读课件边填空，不要一口气填完。
2. **Numbers are gold.** Every theory page asks for the key numbers (6/8 · 15 s · 75% · 84 · 11% vs 100% · 1961/1963/1965) — examiners reward them. 数字是采分点。
3. **Check answers** on the last page and tick the tracker below. 对答案并打卡。每页右上角标有对应课件章节。

Syllabus map — what the exam can ask 大纲考点 (spec 4.1.1–4.1.3)

Syllabus	Content 内容	Workbook pages
4.1.1	CC Classical conditioning — key terms, three stages, Pavlov (1904), four phenomena	pp. 3–5
4.1.2	OC Operant conditioning — Thorndike, Skinner, ABC, reinforcers, schedules + Skinner (1948) 'Superstition in the pigeon'	pp. 6–11
4.1.3	SLT Social learning theory — models, vicarious reinforcement, the four processes (ARRM)	pp. 12–14
Exam skills	Describe with accurate detail · identify reinforcer/punishment types · apply ARRM · 8-mark evaluation essay	p. 15
Self-test	Brain dump from memory · sentence patterns · answer key	pp. 16–17
Exam format 考试形式: describe questions need the mechanism named precisely ; apply questions need the scenario detail welded onto the term ; evaluate questions (8 marks) need point + evidence + why it matters .		

Review tracker 复习打卡

- ☐ First pass — all blanks filled 第一遍填满 Date: _____
- ☐ Three theories each summarised in one sentence from memory 每个理论一句话默写 Date: _____
- ☐ Answer key checked — corrections in pen 对过答案并用笔订正 Date: _____
- ☐ Brain dump page done from memory 合上笔记完成自测页 Date: _____

The one-line map of the whole chapter 全章地图

This chapter gives you **three great learning theories** (三大学习理论) — three answers to the same question, "where does behaviour come from?" 记住主线：
① **CC** 联结 **association** (two things repeatedly appear together) → ② **OC** 后果 **consequence** (what follows a behaviour decides if it returns) → ③ **SLT** 观察 **observation** (watch another person's outcome and copy).

Getting started — where do fears come from? 恐惧从哪来

In pairs, discuss a situation that could have caused a fear of each animal. Then label which two things got **associated**. 给每个动物编一个「被吓到」的小故事。

Animal 动物	The frightening situation 情境	What got associated 什么被绑在一起
 spider		
 snake		
 dog		
 horse		

Three time points, three stages 三个时间点 = 三个阶段

Every fear story has the same three moments. Fill in the label each one will get in §3:
① **Before** the fright — the object means _____ (nothing 毫无意义) → this is the _____ (NS) .
② **The moment** of fright — the object appears *together with* the scare → this is the _____ (pairing 配对) stage.
③ **After** — the object alone now triggers fear → it has become the _____ (CS) .

(Keep your fear stories — by the end of §3 you will be able to label every step using the proper psychological terms.)

Key term 填空

Classical conditioning (经典条件反射) : learning by _____ (association 联结) . When a **neutral stimulus** is repeatedly _____ (paired 配对) with an **unconditioned stimulus**, the neutral stimulus comes to elicit the _____ (same response 相同反应) .

The five terms — fill in the metronome example 五术语填空

Term	What it means	In Pavlov's metronome study
Neutral stimulus (NS) (中性刺激)	A stimulus that _____ (does not 本身不引起反应) by itself produce a response.	_____ (the metronome, before pairing)
Unconditioned stimulus (UCS) (无条件刺激)	Any stimulus producing a _____, unlearned response (a reflex action). (natural 天生的)	_____ (food 食物)
Unconditioned response (UCR) (无条件反应)	A behaviour shown in response to the UCS; occurs _____. (without any learning 无需学习)	_____ (salivation 流口水)
Conditioned stimulus (CS) (条件刺激)	The _____ NS <i>after</i> association with the UCS. (former 原来的)	_____ (the metronome, after pairing)
Conditioned response (CR) (条件反应)	The behaviour shown in response to the CS — _____ as the UCR. (the same behaviour 同款行为)	_____ (salivation at the metronome alone)

The three stages 三阶段填空

Stage	What happens	Name changes
Before conditioning	The NS elicits _____; the UCS elicits the _____. (no response · UCR)	—
During conditioning	The NS is _____ with the UCS. (paired 配对)	NS still just NS
After conditioning	The NS <i>alone</i> elicits the same response.	NS → _____ · UCR → _____ (CS · CR)

The restaurant example 课本例子

You ate at a restaurant and the food made you ill (UCS) → feeling nauseous (UCR). Now the restaurant itself becomes a _____ (CS) and merely passing it makes you feel _____ (nauseous 恶心) (CR).

Exam tip — memorise this line 考点金句

The neutral stimulus becomes the conditioned stimulus, and the unconditioned response becomes the conditioned response.

最容易错的就是把 after 阶段写成 UCR——after 阶段一定是 CS + CR。

Pavlov (1904 Nobel Prize) — the original experiment 填空

Who / what	Ivan Pavlov, a Russian physiologist who won the Nobel Prize in _____; he mainly studied _____. (1904 · digestive processes 消化过程)
What he noticed	The dogs drooled _____; he hypothesised they were reacting to the _____ of his assistants. (without the proper stimulus · lab coats 白大褂)
Procedure	He built a _____ lab; the NS was a _____ presented immediately before the food over several learning trials. (soundproof · metronome)
Finding	At the sound of the metronome alone , the dogs _____. (drooled / salivated 流口水)
Conclusion	Environmental stimuli previously unrelated to a reflex can, through _____, trigger the reflex. (repeated pairings 反复配对)

Taking it further — higher-order conditioning 高级条件反射

Pavlov paired a **further NS** with the already-established CS (e.g. a shape/colour **CS2** with the metronome **CS1**) and found this was _____. (possible 可行)

He also found the **more similar** a new sound was to the CS, the _____ the dog drooled. (greater 越多)

The four phenomena beyond the pairing 四种现象

Term	Definition 填空	Example
Stimulus generalisation (刺激泛化)	Producing the _____ response to a stimulus that is _____ to the CS. (same · similar 相似的)	fear of spiders → also fear _____ (similar insects 类似昆虫)
Stimulus discrimination (刺激辨别)	The CR occurs only to the specific CS and _____ to other stimuli. (not 不)	fear of moths, but _____ (not other flying insects)
Extinction (消退)	The CS is repeatedly presented _____, so the CR gradually disappears. (without the UCS 不再配 UCS)	metronome sounds, no food → no _____ (salivation)
Spontaneous recovery (自发恢复)	After extinction, re-pairing CS + UCS produces _____ re-learning. (rapid/accelerated 快速的)	re-pair twice → dog drools at _____ again (the metronome alone)

The deepest insight 最深的洞见

Spontaneous recovery means **extinction is not the same thing as** _____ — while the response may disappear, it has _____. (unlearning · certainly not been eradicated 并未被删除)

这解释了为什么戒掉的恐惧、戒掉的瘾容易复发。

任何一道 *evaluate classical conditioning* 的题，下面这条「2 强 1 弱 2 辩论」结构都适用。每格填 Point + Evidence + Why，连起来就是完整的 AO3 段落。

Evaluation point	The evidence 填空	Why it matters
Strength ① Experimental support	Pavlov's controlled dog experiments; Watson & Rayner (1920) conditioned Little Albert to fear a _____. (white rat 白鼠)	Lab-controlled cause-effect in animals <i>and</i> a human replication.
Counterweight to that support	Little Albert was described as a _____ child, so the result may not generalise. (particularly unemotional 特别无情绪反应)	One unusual child is a thin base for generalising.
Strength ② Phobias & therapies	Explains phobias ; underpins flooding & systematic desensitisation (systematic desensitisation = 系统脱敏) . Capafóns et al. (1998) reduced fear of _____. (flying 飞行)	A theory generating a working treatment has real explanatory power.
Strength ② (b) Aversion therapy	Addictions treated by associating the behaviour with an unpleasant stimulus — an _____ or a drug that makes you nauseous. (electric shock 电击)	Same associative logic run in reverse.
Weakness Narrow range	It only explains _____ responses; it cannot explain new _____ responses, and ignores _____ processes and _____ factors. (reflexive/involuntary · voluntary · cognitive · biological (genes, neurotransmitters))	Association handles reflexes but not choosing, planning or deciding.
Debate ① Nature–nurture	CC explains behaviour as acquired through experience, so it is a _____ explanation — suggesting all behaviour is learned. (nurture 教养)	Taken alone it overclaims and ignores innate predispositions.
Debate ② Social control & ethics	Aversion therapy has a controversial history as a form of _____; its aversive stimulus is unpleasant or even _____. (social control 社会控制 · harmful 有害)	Whose definition of "undesirable" gets conditioned?

Exam practice — write a full AO3 paragraph 写一段完整评价

"Evaluate classical conditioning as an explanation of human behaviour." (8)

要求：至少 1 个 strength + evidence、1 个 weakness + evidence、1 个 Issues & Debates 角度 + balanced conclusion。

The core claim 填空

Operant conditioning is learning through _____: an association is made between a behaviour and its _____. (consequence 后果) If a behaviour is _____ it is unlikely to be repeated; if it is followed by a positive experience it is likely to be _____. (punished · repeated 重复)

The pigeon's buttons 课本例子

A pigeon taps a _____ button → gets a food pellet; taps a _____ button → gets a mild shock. It learns to press the blue but _____ the red button. (blue · red · avoid 回避)

Edward Thorndike (1911) — instrumental learning 工具性学习

What he did	Placed a kitten in a _____ it had to solve to escape for a food reward. (puzzle box 迷箱)
What happened	The kitten first climbed around _____ and _____ hit the latch; after several trials it escaped faster. (randomly · accidentally 偶然)
What it shows	Learning was by _____, not by insight. (trial and error 试误)

KEY TERM — the law of effect 效果律 (Thorndike)

A behaviour followed by a _____ consequence will be _____; a behaviour followed by an unpleasant consequence will be _____. The more often a response is performed in a given situation, the more likely it is to be _____. (nice · replicated 重复 · withdrawn 消退 · repeated)

Burrhus Skinner — operant conditioning 操作条件反射

His stance	He took a _____ approach and felt he could not study what was not _____ — such as the mind. (scientific · directly observable 可直接观察)
Why "operant"	Because with this learning you are _____. ('operating' on the environment 在环境上操作)
His device	Research began in the _____s using the _____, a box that could dispense _____ and electric shocks to rats or pigeons. (1930s · Skinner box · food)

KEY TERM — the ABC model 填空

A way of explaining how operant conditioning works, showing how the consequence of a behaviour influences its replication.

Antecedent (前因) : a stimulus that _____ a behaviour (e.g. lights/noise). (triggers 触发)

Behaviour (行为) : a response that can be _____ as an outcome of the antecedent. (observed/measured 观察测量)

Consequence (后果) : the _____ following the behaviour (food/shock). (reward or punishment)

The four consequences 四种后果

Type	Definition 填空	Example
Positive reinforcement (R+) (正强化)	_____ something pleasurable → the behaviour is _____ likely to repeat. (Adding · more)	food pellet after lever press
Negative reinforcement (R-) (负强化)	The _____ of something unpleasant → the behaviour is more likely to repeat _____. (removal 移除 · to avoid it)	shock stops when lever is pressed
Positive punishment (P+) (正惩罚)	_____ an aversive stimulus → the behaviour is _____. (Adding · reduced)	parent _____ the child (scolds 责骂)
Negative punishment (P-) (负惩罚)	The _____ of a liked stimulus → the behaviour is reduced. (removal 移除)	favourite _____ taken away (toy 玩具)

The two-step method 两步判定法

- ① Does the behaviour repeat? Yes → _____; No → _____. (reinforcement · punishment)
- ② Did they get something or lose something? Got → _____; Lost → _____. (positive · negative)
- "negative" 是数学意义上的「减去」，不是「不好」——R- 移走坏东西来鼓励，P- 拿走好东西来打击，千万别混。

Is punishment effective? 课本观点

Punishment is **not** considered an effective way of learning because it: ① only produces a _____ suppression of the behaviour; ② only teaches you what _____; ③ can be humiliating and create _____. (temporary 暂时的 · not to do · anxiety and fear 焦虑恐惧)

Two types of reinforcer 两类强化物

Type	Definition 填空	Example
Primary reinforcers (初级强化物)	Occur _____ and satisfy _____ such as food, water and shelter. No learning needed. (naturally · basic needs 基本需求)	food · water · shelter
Secondary reinforcers (次级强化物)	Only work because they are _____ with a primary reinforcer; they can be _____ for one. (associated 关联 · exchanged 兑换)	money · tokens · stars

KEY TERM — a token economy 代币制

A treatment method that provides _____ for desirable behaviour that can be saved up or exchanged for a _____. (secondary reinforcement · primary reinforcer)

Tokens are given **only** in return for the desired behaviour — this is _____. Used in institutions such as _____. (selective reinforcement 选择性强化 · schools and prisons)

Star chart (星星表) and 咖啡馆集章卡都是代币制的日常版本。

Paul & Lentz (1977) — the token-economy study 数字填空

Sample	_____ patients with _____. (84 · schizophrenia 精神分裂症)
What happened	Tokens given for appropriate behaviour, exchanged for _____. (luxury items 奢侈/奖励物品)
What worked	Reduced some symptoms (e.g. bizarre _____), and improved _____ and self-care skills. (motor behaviours 动作行为 · interpersonal skills 人际)
What did NOT work	Not effective for _____ symptoms such as delusions and hallucinations, nor hostile behaviour such as screaming. (cognitive 认知)
Key numbers	_____ % of token-economy patients needed drug treatment vs _____ % of the control group. (11 · 100)

Activity 3 — Should we use token economies? 讨论题

In pairs, discuss whether it is appropriate to use token economies to promote desirable behaviour. 至少用「一个理论 (OC) + 一个研究证据 (Paul & Lentz) + 一个伦理顾虑」组织回答。

Continuous vs partial 连续 vs 部分

Continuous reinforcement (连续强化) : reinforced _____. (every time 每次) **Partial reinforcement (部分强化)** : reinforced _____. (some of the time 有时)

Schedules determine **when** a behaviour is reinforced.

A behaviour learned through partial reinforcement **takes longer to learn, but is more _____ to extinction.**
(resistant 抗)

The four partial schedules 四象限填空

Schedule	How it works 填空	Real-life example
Fixed interval (固定时距)	Reward after a _____ amount of time has passed. (preset 预设)	_____ (weekly pay / 期末冲刺型)
Variable interval (变化时距)	Reward after a set time, but the _____ changes each time. (interval 时长)	_____ (老师不定期抽查作业)
Fixed ratio (固定比率)	Reward after a _____ number of responses (e.g. 8 lever presses). (fixed 固定)	_____ (买十送一 / 集章卡)
Variable ratio ★ (变化比率)	Reward after a set number of responses, but the _____ required changes each time. (number 次数)	_____ (老虎机 / 抽卡)

Which is most resistant to extinction? 考点

Skinner argued **variable ratio** is best for maintaining behaviour: food is contingent on pressing, but the rat _____ when food will arrive → the extinction rate is _____. (cannot anticipate 无法预测 · low 低)
考试问 *which schedule is most resistant to extinction and why*: 答 variable ratio + 「行为仍会导致奖励，但无法预测何时」。

Memory grid 记忆轴

Columns = **interval** (按时间) vs **ratio** (按次数)
Rows = **fixed** (固定) vs **variable** (变化)

Note 一句记忆

FI 期末冲刺 · VI 随时待命 · FR 集章冲刺 · VR 赌场停不下来

Evaluation point	The evidence 填空	Why it matters
Strength ① Scientific evidence	Animals observed in _____ to eliminate other variables → a _____ relationship; videos taken and behaviours _____ (isolated boxes · cause-and-effect · precisely recorded)	Objective, replicable, cause-and-effect.
Weakness Ecological validity	The environment is _____; and animals use trial and error while humans _____ (contrived/artificial · problem-solve 解决问题)	What happens in a box may stay in the box.
Strength ② Applications (token economy)	Ayllon & Milan (1979) reviewed such programmes and found them _____ at promoting behaviours — but benefits are short-lived, _____, and seen as a violation of _____. (successful · don't generalise beyond the institution · human rights)	Applications exist — with a shelf life, a boundary and an ethics question.
Strength ③ Wide assortment	Explains behaviours from addiction to _____ — e.g. a child says "juice" and the parent smiles and gives juice, so the utterance is _____. (language acquisition · positively reinforced)	Handles voluntary, goal-directed behaviour — not just reflexes.
Debate ① Social control	Behaviour modification can support skill-building, or be a form of _____; Skinner described a managed utopia in _____. (social control · Walden Two)	Who decides which behaviour to reinforce?
Debate ② Reductionism	Explaining all behaviour as the _____ ignores innate/biological factors and unobservable states such as _____. (sum of our experiences · anger or happiness)	Throws away cognition, emotion and biology.
Weakness Animal ethics	Skinner's animals had to be starved to around _____ of their normal weight to be motivated. (75 per cent)	Weigh the suffering against the benefits.

Exam practice — write a full AO3 paragraph 写一段完整评价

"Evaluate operant conditioning as an explanation of human behaviour." (8)

建议顺序：强① 科学 → 弱 生态效度 → 强② 应用 → 弱 伦理 → 辩论 (social control / reductionism) → balanced conclusion。

AIM · METHOD · RESULTS · CONCLUSION 填空

Aim: to test what happens if a pigeon is _____ with food **without any desired behaviour being required.** (reinforced 强化)

Method: hungry pigeons placed in a cage a few minutes a day, fed via a food hopper that appeared for _____; food presented at _____ regardless of behaviour. (five seconds · regular intervals 固定间隔)

Results: in _____ out of _____ pigeons, clearly defined behaviour developed — e.g. turning _____, thrusting the head to a corner, tossing the head, a _____ motion, brushing the head to the floor. (6 · 8 · counterclockwise 逆时针 · pendulum 钟摆)

Conclusion: the behaviours resulted from _____ — the food reinforced whatever behaviour the bird happened to display just before it appeared. (accidental reinforcement 偶然强化)

Two more details 两个关键数字

Effect strongest when	food is presented at short intervals, such as every _____ seconds (only a narrow range of behaviours is possible in that time). (15)
Once established	the interval could be lengthened to up to _____ minutes. (two 两)
Everyday parallel	a sporting _____ you take to a game because your team won when you had it. (mascot 吉祥物)

Evaluation of Skinner (1948) 三点评价

Point	Fill in the reasoning 补全推理
Weakness: sample & species	Only _____ pigeons (6 of 8 showed the effect), and pigeons _____; humans are more likely to use _____, so findings may not generalise. (8 · are unlike humans · rational thinking 理性思考)
Strength: control & reliability	Standardised procedure with specific timings (5 s / 15 s / 2 min); _____ had perfect agreement when counting behaviours → _____. (two observers · inter-rater reliability 评分者信度)
Weakness: ethics	Pigeons are protected _____; they were starved to _____ of their healthy body weight — though Skinner minimised the number used to just _____. (vertebrate animals 脊椎动物 · 75% · eight)

Why we need a third theory 为什么需要第三种理论

CC explains reflexes; OC explains consequences. But you did not learn to **drive, speak or dance** by trial and error, and they are not reflexes — you _____ someone. (watched 观察)

Social learning theory (attributed to _____) proposes we learn by observing others and _____ the behaviour. (Albert Bandura · imitating/copying 模仿)

Unlike CC and OC, it does **not** ignore _____ — you must pay attention and remember to copy something. (cognition 认知)

KEY TERMS 填空

Models / modelling (榜样/示范) : individuals that are observed are called models; they demonstrate a behaviour in the presence of another person — this is _____. (modelling)

Role models (角色榜样) : significant individuals in a person's life — you are more likely to imitate _____ or _____. (parents · teachers)

) **Vicarious reinforcement (替代强化)** : learning through the _____ — learning from the successes or mistakes of others. (consequence of another person's behaviour)

When is imitation more likely? 何时更愿意模仿

- Behaviour is more likely to be imitated if the observer can _____ with the role model. (identify 认同)
- Effective role models are typically the _____ as the observer and/or admired for having _____. (same sex 同性别 · status/power 地位或权力)
- An observer is more likely to reproduce the behaviour if the consequences for the role model are _____. (rewarding 有奖励)

The sibling example 课本例子

A younger sibling watches their older sibling eat lunch and get _____ for not making a mess → they are likely to _____ this behaviour. They are unlikely to copy a behaviour that was _____ (e.g. eating with their mouth open). (praised 被夸 · copy · punished 被罚)

Bandura theorised that social learning only occurs if **all four** cognitive processes happen. 前两关是「输入」，后两关是「输出」。

Process	What it means 填空	Input / Output
1 · Attention (注意)	Attention must be paid to the role model _____, or no learning occurs. Depends on the _____ of the behaviour and the observer's _____; children attend more to _____ models. (or else · distinctiveness 显著性 · arousal 唤醒度 · same-sex)	Input 输入
2 · Retention (保持)	The individual must _____ what they attended to and be able to _____ it later — this is a cognitive process relying on _____. (store · recall 回忆 · memory 记忆)	Input 输入
3 · Reproduction (再现)	_____ of the modelled behaviour. The _____ of the individual can affect whether it can be imitated. (Imitation 模仿 · physical capabilities 身体能力)	Output 输出
4 · Motivation (动机)	The 'incentive'. If a _____ is offered, we are more likely to reproduce the behaviour. (reward 奖励)	Output 输出

Three types of motivation 三种动机

Type	Definition 填空	Example
Intrinsic (内在动机)	Doing an activity for its _____ rather than a physical outcome. (inherent satisfaction 内在满足感)	a boy imitates his dad and _____ (feels more like his dad)
Extrinsic (外在动机)	A motivator that is something _____ with a separable outcome. (tangible 有形的)	a sportsperson receiving a _____ (trophy or medal)
Vicarious (替代强化)	When the role model is seen to _____ — the observer does not get the reward themselves. (receive a reward 得到奖励)	"If I act like that, I could _____ too!" (get a reward)

The one rule that must be memorised 必记一条

If **any one** of the four processes fails, _____. (social learning does not occur 社会学习不会发生)

四关全过才会模仿——这是 describe 题的四个采分点。易错：vicarious reinforcement 属于 motivation 阶段，不是独立阶段。

Evaluation point	The evidence 填空	Why it matters
Strength... but artificial	Commitment to scientific research methods (reliability, cause–effect) — but studies took place in _____. (artificial settings 人工场景)	Lab rigour buys cause–effect and costs realism.
Strength: recognises cognition	Unlike CC and OC, SLT allows for _____ and acknowledges cognitive & motivational factors — the four processes. (individual differences 个体差异)	The learner is a thinker, not a reflex machine.
Strength: contribution & therapy	Contributed to the psychology of aggression & _____; basis for _____ therapies for those who find direct conditioning hard. (gender development · modelling-based)	The theory powers real treatments.
Strength: experimental series	Bandura, Ross & Ross (_____): children imitated a _____ adult role model. (_____): also copied a film and even a cartoon version. (Bandura _____): less likely to copy a punished model <i>unless</i> offered a reward. (1961 · same-sex · 1963 · 1965)	Live model → film/cartoon → vicarious punishment and reward effects.
Strength: real-life application	Informed censorship regulation of television — age certification and _____. (pin-protected viewing)	The theory shaped broadcasting policy.
Biological support	Olsson & Phelps (2007) : _____ participants watched someone receive a shock; _____ showed the _____ was more active. (11 · fMRI · amygdala 杏仁核)	Watched fear becomes real, measurable fear.
Animal evidence	Mineka & Cook (1988) : captive _____ monkeys learned fear of snakes by watching others. Nicol & Pope (1999) : chickens were more likely to copy key-pecking from a _____ bird. (rhesus · dominant 优势)	Observational learning crosses species.
Pair: support vs challenge	Prot et al. (2014) : a _____-country study found a positive correlation between _____ media use and prosocial behaviour. Charlton (2000) : on the island of _____, behaviour did _____ after TV was introduced. (seven · prosocial 亲社会 · Saint Helena · not change)	Hold both for a balanced evaluation.

Exam practice — write a full AO3 paragraph 写一段完整评价

"Evaluate social learning theory as an explanation of behaviour." (8) — 策略：把 Prot (2014) 和 Charlton (2000) 配对写，一正一反。

Question 1 — Rhea and the star chart. Rhea has started to pinch her brother. Her mother uses operant conditioning: every day Rhea does not pinch her brother, she gets a star on a star chart. After ten stars she can have a biscuit.

(a) Identify the **primary reinforcer** (1 mark) →

(b) Rhea then pinches the family cat; her mother takes away her favourite toy for a day. **State the type of punishment** (1 mark) →

(c) Explain why the punishment did not help Rhea learn how to play nicely with the cat (1 mark) →

Question 2 — Aanya and the bread. Aanya has seen her father make bread several times. Her mother always thanks him by cooking his favourite meal afterwards. Aanya makes bread for the first time, feels a sense of achievement, and decides to make bread every week. **Describe, using social learning theory, why Aanya makes bread.** (4 marks)

Plan first — map each ARRM process to a detail 每点焊住一个场景细节

Process	Keyword from the scenario
1 · Attention	_____
2 · Retention	_____
3 · Reproduction	_____
4 · Motivation	_____

Question 3 (AO3, 8 marks) — Evaluate classical conditioning as an explanation for human behaviour.

Plan first — fill the essay skeleton 先填提纲再写

Move	Your keywords
1. Strength + evidence	_____
2. Counterweight	_____
3. Strength + evidence (applications)	_____
4. Weakness + evidence	_____
5. Debate (nature–nurture / ethics)	_____
6. Balanced conclusion	_____

(提纲填好后，把各步串成完整 essay 写在答题纸上 (另附纸)。)

- CC — the five terms NS · UCS · UCR · CS · CR, each with the metronome example:
- The three stages, in order, and the one line of name-changes:
- Pavlov — who, which prize, the soundproof lab, the NS, what he concluded:
- The four phenomena — write each definition and the one-sentence extinction ≠ unlearning idea:
- Thorndike — the puzzle box, trial and error, the law of effect; Skinner — why "operant":
- The ABC model (three words) and the four consequences with one example each:
- Primary vs secondary reinforcers; then Paul & Lentz (1977) — sample, what worked, what didn't, the two numbers:
- The four schedules 2x2, and which one is most resistant to extinction and why:
- Skinner (1948) — aim, method, 6/8, the behaviours, accidental reinforcement, 15 s and 2 min:
- SLT — model vs role model vs vicarious reinforcement; then ARRM and the three motives:
- Bandura's three study years and what each showed; then Prot (2014) vs Charlton (2000):

Exam sentences to memorise 背下来的句式

When asked...	Sentence pattern 句式
Describe CC (4)	"The neutral stimulus becomes the _____ stimulus, and the unconditioned response becomes the _____ response." (conditioned / conditioned)
Identify a consequence (1-2)	"The behaviour is _____, and something was _____, so this is _____." (repeated/reduced · added/removed · R+P+R-P-)
Apply SLT (4)	"Aanya _____ her father (attention), _____ it over several occasions (retention), had the _____ to do it (reproduction), and was motivated by _____." (watched · remembered · capability · vicarious reinforcement / intrinsic motivation)
Evaluate a theory (8)	"A strength is _____ because _____ (study), which means _____."

Final self-check 最后自问

合上笔记，能否在 10 分钟内默写出：① CC 的五术语 + 三阶段的 name-changes? ② 四种现象的判定口诀? ③ 四种后果 (R+/R-/P+/P-) 各一个例子? ④ 四种强化程序 + 最抗消退的是哪个? ⑤ Skinner (1948) 的 6/8、15 s、75%? ⑥ ARRM 四阶段 + 三种动机? ⑦ Bandura 1961/1963/1965 分别证明了什么? 卡住就回课件对应章节重看。

p.2 — 三理论：CC 联结 / OC 后果 / SLT 观察。三时间点：before = NS（毫无意义）· the moment = pairing · after = CS。Fear 故事可参考：蜘蛛——摸柜子摸到蜘蛛被吓到；狗——被狗追咬过。

p.3 — CC: association · paired · same response。五术语：NS 本身不引起反应；UCS 天生/无需学习；UCR 无需学习；CS 原来的 NS；CR 同款行为。metronome 例：metronome before pairing / food / salivation / metronome after pairing / salivation at metronome alone。三阶段：Before—no response · UCR；During—paired；After—CS · CR。餐厅：CS · nauseous。

p.4 — Pavlov: 1904 · digestive processes; without the proper stimulus · lab coats; soundproof · metronome; drooled; repeated pairings。Higher-order: possible · greater。四现象：generalisation—same · similar · similar insects; discrimination—not · not other flying insects; extinction—without the UCS · salivation; spontaneous recovery—rapid/accelerated · the metronome alone。洞见：unlearning · certainly not been eradicated。

p.5 — 强① white rat; counterweight: particularly unemotional。强② flying; aversion: electric shock。弱: reflexive/involuntary · voluntary · cognitive · biological。Debate①: nurture。Debate②: social control · harmful。8 分要点：强（Pavlov + Watson & Rayner 1920）→ 转折（Albert 特殊）→ 强（phobias → SD / flooding, Capafóns 1998; aversion therapy）→ 弱（范围窄 + 忽略认知与生物）→ nurture 辩论 → 伦理 → balanced conclusion。

p.6 — core: consequence · punished · repeated。pigeon: blue · red · avoid。Thorndike: puzzle box · randomly · accidentally · trial and error。Law of effect: nice · replicated · withdrawn · repeated。Skinner: scientific · directly observable · 'operating' on the environment · 1930s · Skinner box · food。

p.7 — ABC: triggers · observed/measured · reward or punishment。四后果：R+ Adding · more; R- removal · to avoid it; P+ Adding · reduced · scolds; P- removal · toy。两步法：reinforcement · punishment; positive · negative。Punishment: temporary · not to do · anxiety and fear。

p.8 — Primary naturally · basic needs; Secondary associated · exchanged。Token economy: secondary reinforcement · primary reinforcer · selective reinforcement · schools and prisons。Paul & Lentz: 84 · schizophrenia · luxury items · motor behaviours · interpersonal skills · cognitive · 11 · 100。

p.9 — Continuous every time; Partial some of the time; more resistant。FI preset · weekly pay; VI interval · 老师不定期抽查; FR fixed · 买十送一; VR number · 老虎机。Most resistant: variable ratio — cannot anticipate · low。

p.10 — 强① isolated boxes · cause-and-effect · precisely recorded。弱: contrived/artificial · problem-solve。强② successful · don't generalise beyond the institution · human rights。强③ language acquisition · positively reinforced。Debate①: social control · Walden Two。Debate②: sum of our experiences · anger or happiness。弱: 75 per cent。

p.11 — Skinner 1948: reinforced · five seconds · regular intervals · 6 · 8 · counterclockwise · pendulum · accidental reinforcement。细节：15 · two · mascot。评价：8 · are unlike humans · rational thinking; two observers · inter-rater reliability; vertebrate animals · 75% · eight。

p.12 — 桥: watched · Albert Bandura · imitating/copying · cognition。Terms: modelling · parents · teachers · consequence of another person's behaviour。模仿条件: identify · same sex · status/power · rewarding。Sibling: praised · copy · punished。

p.13 — ARRM: Attention—or else · distinctiveness · arousal · same-sex; Retention—store · recall · memory; Reproduction—Imitation · physical capabilities; Motivation—reward。三动机: Intrinsic—inherent satisfaction · feels more like his dad; Extrinsic—tangible · trophy or medal; Vicarious —receive a reward · get a reward。铁律: social learning does not occur。

p.14 — artificial settings; individual differences; gender development · modelling-based; 1961 · same-sex · 1963 · 1965; pin-protected viewing; 11 · fMRI · amygdala; rhesus · dominant; seven · prosocial · Saint Helena · not change。8 分策略: Prot (2014) 正 + Charlton (2000) 反 配对写；再补 Olsson & Phelps 生物证据、Bandura 系列实验、认知优势。

p.15 — Q1a: **the biscuit** (primary reinforcer — 满足基本需求; star 是 secondary, 能换饼干才有效)。Q1b: **negative punishment** (移除喜欢的玩具来减少行为)。Q1c: 惩罚只教「不该做什么」, 没有教「该怎么做」; 只是暂时压制, 还可能带来焦虑/恐惧。Q2: ① Attention—Aanya 注意到父亲做面包 (可认同的同家庭榜样); ② Retention—她看过多次并记住、可回忆; ③ Reproduction—她有能力, 第一次做出面包; ④ Motivation—母亲用做饭感谢父亲 (vicarious reinforcement: 榜样被奖励) + 她自己的成就感 (intrinsic motivation) → 决定每周做。Q3: 见 p.5 骨架, 六步填空对应

strength→counterweight→strength(apps)→weakness→debate→conclusion

p.16 — 句式: ① conditioned / conditioned ② repeated|reduced / added|removed / R+|R-|P+|P- ③ watched · remembered · capability · vicarious reinforcement (或 intrinsic motivation) ④ (strength point) · (study) · (implication)。

最后提醒：Ch20 的采分点是「理论 + 术语 + 数字」三件套。NS→CS / UCR→CR · 四种现象 · R+/R-/P+/P- · 四种强化程序 (VR 最抗消退) · 6/8 + 15 s + 75% · 84 + 11% vs 100% · 1961/1963/1965 · 11 + fMRI + amygdala——把这几组背到像记比分一样熟。评价题永远「承认强度 + 指出裂缝 + balanced conclusion」。
